How Toast works is that when you begin to write a new disk or session, you can "Add Data" or simply drag a file or folder into Toast's window. If you have no data in there at all (as you will when you start), then the first folder you put in there will become the name of the disk. You keep adding data to that folder to round out the contents of the disk. It's as though Toast is compiling all the data into one big folder - and later that folder becomes the new disk. Any icon associated with the first folder you drag in there first becomes the icon for the disk, but since the Atari doesn't get its icon information that way (via a resource fork), it will ignore it anyway. The Mac, on the other hand, will see the icon when the disk is loaded into the MacOS.

Generally, what I do is create an empty folder on my hard disk with the icon I want and give it the name I want to use for the disk (I'll do this in MacOS). Then I have something I can drag into Toast to begin my disk writing activity, and from there I proceed to round up the data I want on the disk. If you create this folder on the Mac's hard drive, use all capital letters for the name. (Shouldn't matter really, but why tempt fate?)

HT> I guess a generic icon is used instead, and if I've been using Macintosh
HT> icons for the folders inside the CD, they're probably ignored by the ST,
HT> but shown when I put the CD in my Mac, right?

Only if you use the "Use Apple Extensions" option outlined above. See pages 6-23 to 6-26.

As I'm sure you know already, the Mac associates icons with files/folders by including the information in a resource fork, which accompanies every file on a Mac storage device. The Atari, on the other hand, only makes the connection between files/folders and icons through the desktop - NEWDESK.INF in TOS 3 and 4, DESKINF (I think that's right...) in TOS 1 and 2. Magic uses the Register Application function to associate icons with files - which you are probably already familiar with. I'm using Thing, which has yet another means of doing this, through Thing's own THINGICN.APP.

If you write a straight 9660 CD, and then put it in your Mac, it will show up in much the same way that a PC formatted floppy shows up - generic layout, with a list of files, or else the Mac's default icon

for PC files. Remember that DOS and TOS use the file name extensions (like .PRG or .ACC) to determine what a file is, whereas the Mac uses Creator and Type codes that are written in each file.

As I said at the outset, I think you need to decide. Do you want to use these disks on both the Mac AND the Atari - or are you simply looking for a way to back up a bunch of Atari data, that any Atari (or MagicMac) can use.

If it's the latter, then ignore all this stuff about the different file handling methods for DOS and MacOS, and all that about Hybrid disks - just write an ISO 9660 Level 1 disk with the constraints listed at the top of this (now, rather lengthy) message, that ExtenDos (or whatever you are using) can access without choking.

HT> Regarding the actual name of the CD, should I stick to the 8+3 format
HT> here as well, to avoid any problems?

Yup. Keep it simple, bud. Make it so it would work on the most striped down 520ST and you should have a winner. If you currently have any Atari CDs that you can view with your system, like the Suzy B's collections, or Crawley Crypt, see how they are laid out.

When all is said and done, the disk is cheap, and if you screw up, just fix things and try again - just don't erase your hard disk until you know you have a working CD, and a couple of backups of the backups.

Regards,

Wdialog gives new system calls of Magic away to non Magic users.
It is not for use with Magic, but mainly for ASH programs you
want to run without Magic. Do not use it as a cheap upgrade
to newer Magic's. That's my experience.

I have V2.01 which I use with TT TOS.
It came with NVDI 5, (not Magic 6) But it shurely was intended
to allow Magic 6 functions to be used by some NVDI utilities.

So there is a connection between Magic version and Wdialag version.

Hi

Forgive me if I'm wrong;) You can also use the SyQuest 135 cartridge
with it. So if you want to upgrade from a 135 drive, you can without
losing the data or throwing your 135 carts away.

In article <7bajq2gnh1@canopus.cc.umanitoba.ca>, trevor@cyberspc.mb.ca
writes
>Perfect for a Falcon or TT with a SCSI port or any other ST with an

Hi

I don't see any reason that you can't. STinG (or STiK, whichever TCP/IP
you use) should be able to do it as programs go through the TCP/IP to
access the 'net.

I would love to be able to network my ST's to my PC's and not use
programs like Ghostlink to transfer data; as (1) it's restricted to
modem speeds (mine connects at 56000, should no more than 33600. I can't
work out why!) (2) data security is compromised, although everything
looks fine and no errors are detected!!

If someone has the interface, and software to drive it, for an Ethernet
connection for the ST I'll be a very happy chappy;)

This ebay auction includes a:

* Spectre 128. This cartridge comes with 128K ROMs installed.
* Spectre GCR. This cartridge does not have ROMs, but they can be swapped with the above ROMs. This cart also can hook up to your disk drive port to allow you to read/write 800K HPFS Macintosh disks directly!!
* Magic Sac + . It also includes a set of 64K Mac ROMs. This is the emulator that started it all! Includes a built in clock.

Please note: there is no software included in this package, only the hardware.

Bidding starts at 9.99 for all three. There is no reserve price.

Please see:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=70326588

for the auction.

Thanks for reading!

3704. FA: Casio CZ-101 w/MIDI ports

Source record: 83471

Casio CZ-101 Synthesizer. In excellent condition, with no major marks or scratches. This synthesizer can be hooked up to a computer with MIDI inputs to record and or playback music. Comes with the original AC Adapter. Also includes original box.

I have plugged the unit into a stereo, and works great. I have not had a chance to test the MIDI ports, but I assume they also function correctly. The unit was hooked up to an Atari ST computer with MIDI ports a few years ago, and it worked great. Since then it has only been stored in the closet.

Please see:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=70312188

to place a bid.

Thanks for reading!

Hi again

As i said in the other reply you can change language in Naes. And besides you can also change your Tos in Nvram. On your systems disk theres a prg called MSETUP that you can change Nvram with.

Cheers J&#65533;rgen

I have a, hardly ever even switched on, ATW and it never seemed very quick at all. My Falcon030 and later 040 seemed a lot quicker. Perhaps a properly compiled app such as POV would be OK though. I have never tried anything other than what was already there and that was almost nothing.

If you find anything I would be interested.

You could try getting POV for your Falcon030 (or 040). It can be found at my website.

3707. Re: Creating an Atari CD on a Mac?

Newsgroup: comp.sys.atari.st
Date: 1999-02-28 00:00:00 UTC
From: Oliver_Schildmann@LU.maus.de
Message-ID: <199902280000.a52652@lu.maus.de>
Source record: 83567

Hello Hallvard,

h> In other words, ISO-9660?
Yes.

h> Yes, I think this guy uses "Toast" on his Mac.
No problem!

h> How deep is too deep? How many subdriectories are safe?
On "compatibility mode" (Level 1) it's 8 levels, folders without extension

and some other limitation on characters in filenames (BTW: You can check
it
out with XINFO, it can check the files for ISO-9660 Level 1: "Info-Liste",

last entry in the menu "CD-ROM Check", activate ISO-9660-Check and print
the
list, giving you the files which are not Level 1 compatible).

But: I *think* (I do not know!) that all this *doesn't matter*!!! It's
for
exchanging data between different platforms. The Atari filesystems should
it
handle a little better and as long your CD is not for other systems ...
:-))

So give him what you want to in the way it is. Tell him to switch "Allow
MS-
DOS filenames" (which is ISO 9660 Level 2, or 3(?), I suppose) or "Joliet"
if
you use long filenames (and have a compatible CD driver) and go on.

With Level 2 you can use at least more characters in the filenames and
folders with extension. But although Level 2 allows more characters, avoid

Atari special chars at all cost (i.e. there is a converter image pic to
vector pic which has the filename "CONVERT.PRG" with a "hook" instead the

"V". The Atari should be able to read it from CD, but I suppose that Toast
is
not able to burn it because this is not a proper "DOS name").

h> I guess a generic icon is used instead, and if I've been using
Macintosh
h> icons for the folders inside the CD, they're probably ignored by the
ST,
h> but shown when I put the CD in my Mac, right?
No, on Mac it is a generic icon too, as long as it is ISO 9660 only. You

have
to use the Mac format which is completly different or a Hybrid CD-ROm
which
contains both formats.

h> Regarding the actual name of the CD, should I stick to the 8+3 format
h> here as well, to avoid any problems?
Although most of the Atari programs presents the label of HD and CD as 8+3

(an "error" made by the Digital Research when building GEM), it is indeed
not
8+3 but 11 characters long (minor difference though ;-)).

Greetings, Oliver

IIRC, MagiC 6 has Wdialog functions built in, hence with v. 6 you don't
need it any longer.
When I tested the Jinnee desktop (note that MagiC 6 wasn't available then)
the docs said "running MagiC you don't need Wdialog, running TOS you do",
but I needed to stick Wdialog into my autofolder before it worked. That's
running MagiC 5.01...
I gathered NVDI needs it for certain printer functions, I can see cosmetic
changes to alertboxes using Wdialog.
On my TT, MagiC 5.01 plus Wdialog 1.97 (I went back to this one because of
bugs in 2.0 but meanwhile 2.01 or higher is out) is a ROCKsolid OS.
Autofolder sequence is essential though, one minor change and the
solidness has gone. Reason to use an Autoexec.bat with MagiC.

> programs to support CAB that run on a Mega STe?

FTP: aFTP, can't be beat for most purposes. Though it has problems being called from CAB if the link is to a directory rather than a file, IIRC.

Telnet: TVT102. NB This doesn't support VA start, so make sure the VA start check box isn't checked when configuring CAB to call it. If you are running STinG you might find Telstar more to your taste: it has fewer GEM quirks but it doesn't do such a complete terminal emulation.

Sound player: there are several OK ones, but I reckon that the most compatible (in terms of file types supported) is still LPS.TTP. Again, no VA start and it is a TOS program so no user interface if called from CAB. Also inder MagiC it doesn't like having background DMA switched on: you get flutter!

Video player: MPlayer.

Hi all,

I have just upgraded to and x2,v.90 modem and was wondering do I need to
change anything in the dial.scr and default.cfg files.

Gordy,

The only problems that you might run into is line noise. I upgraded my US Robobtics 33.6 to 56 a couple of months ago and it works fine with STinG. If you have trouble connecting at the higher speeds, check your phone line connections. 56K is real susceptable to line noise. One of the techs at my ISP suggested setting the maximum speed to 57.6 for the modem connection. He said that this will sometimes help if your phone line or phone company connection is a little weak.

Interestingly in the last couple of days I have noticed what sounds like very low background noise (radio commericals) on the phone line connected to my modem. My TT, using STinG, connects just fine at between 46 to 48K. However, my TI Labtop using Win95 refuses to connect to my ISP where it use to connect without a problem - it just took about 10 times as long to do it as the Atari :)

3723. Re: Nova 1280*960 in B&W or 256 colors ? Anyone ?

Newsgroup: comp.sys.atari.st
Date: 1999-02-28 00:00:00 UTC
From: dennis.vermeire@ping.be
Message-ID: <7bbq6m$m13$1@news3.Belgium.EU.net>
Source record: 83583

Jo asked on 28 Feb 1999:
>I'm trying to set a 1280*960 resolution using my Nova card but until
>now I haven't succeeded ...

Start up VMGTT.PRG and define the following:

H V
Total 1664 1071
Lenght 1280 960
Sync 24 12

That's all there is to it -))
However if You have a MACH32 card with 1MB, the maximum refresh rate
at this resolution is 61Mhz, it will flicker...
The same resolution in 256col can only be achieved at 55Mhz, it will
flicker even more...

With a NOVA MACH32 the best working resolution is 1024*768, at 70Mhz
up to 256col. If you want more colors or a higher resolution You need
to have more videomemory on your card or a SUPERNOVA installed.

I'll mail you my setup files

Cheers from Belgium

Dennis

3725. Slow/stop downloads with CAB

Newsgroup: comp.sys.atari.st
Date: 1999-02-28 00:00:00 UTC
From: jlog@zetnet.co.uk
Message-ID: <7bbsipfat1@irk.zetnet.co.uk>
Source record: 83585

Hi

Anyone else having problems with downloading files from websites?
The actual pages seem to be read fairly quickly but if I click on a
file to download it, I get some bytes (could be 2k one time and 20k
the next) and then everything stops. If I press esc it starts from
the beginning again.

I am using Hades, CAB v2, latest OVL (1316), HSmodem and a 28k modem to
zetnet.

>>Thanks
>I guess a bit more. but not past 200.

You must be joking - a magazine is not worth the print run at that small number of copies. If only 200 copies were printed, then the magazine would cost the end user a whole lot more than the price they pay now if only for the fact that printing so few copies would cost more than the current cover price.

I am not speaking officially for AC as I am no longer involved in the running of the mag - although I was involved in the setting up of the mag for the first print run - as far as I remember, this was for printing over 1000 copies, all of which IIRC got sold out. As far as I know, renegade Publishing are having many more copies than the initial number printed.

>The AC statement will of course be more. Thousands more. but that is
>to be expected of course. I do not think you will ever know for sure.
>but let us face facts. how many of us are there?

How many Atari users? Go to a computer show and you'll get an idea of how many there are in that particular country (as a general rule, over half of the Atarians do not turn up to an Atari show)...

That's rather strange, you know I have a Mach32 and I'm able to get
this: 1152*864 256 colors at 95 MHz !!! quite perfect ...

1448 896
1152 864
200 28

But when I try to modify this resolution to achieve 1280*960 things are going
wrong ... I get overlaps in the top of the screen and also in the left
side ...

>With a NOVA MACH32 the best working resolution is 1024*768, at 70Mhz
>up to 256col. If you want more colors or a higher resolution You need
>to have more videomemory on your card or a SUPERNOVA installed.

Same as upper comments, I think it's rather a screen frequency
capabilities question ...

>I'll mail you my setup files

That's nice !

Hi John,

My set-up is probably fairly similar to yours, Hades, 1316 OVL, HSmodem and zetnet, but I have a 56K modem and CAB2.7. I have recently downloaded some files without any undue problems. It may be worth your while updating CAB - 2.7 seems the best so far, (although I get increasingly annoyed with the number of sites I get problems with because they want Java enabled :-((but that's another problem).

Also, have you checked you are using Modem 2 and not Modem 1 ? (Modem 1 is restricted to 19200)

Cheers

Paul

I know you are looking for Freeserve sites Steve, but if these enquiries are from ST owners who have not used the 'net before I strongly recommend Zetnet. It's quite a modest connection charge, with unlimited use and the plus side is the excellent support, both for getting connected and for help with problems afterwards in the form of the Zetnet-Atarians mailing list.

Eh? Why have you done this, Gordon? I don't think an STE will manage
much above 38k4 on DTE which means your highest practical DCE is 28k8.

Hmm ... but to answer the question ... no :-)

I have made available a tos ftp client for the stik api on my web page.

This is a rear burner project for me. (ie I work on it when everything else I'm working on drives me nuts)

It doesn't do everything you might want it to do, but it does work pretty reliably for me, so I've made it available.

If you encounter any problems, you can let me know, but I can't make any guarantees of when it will get fixed.

If that hasn't scared you off ;) it's available from my web site.

| . . . .
|My set-up is probably fairly similar to yours, Hades, 1316 OVL, HSmodem and
|zetnet, but I have a 56K modem and CAB2.7. I have recently downloaded
|some files without any undue problems. It may be worth your while
|updating CAB - 2.7 seems the best so far, (although I get increasingly
|annoyed with the number of sites I get problems with because they want
|Java enabled :-((but that's another problem).
|
|Also, have you checked you are using Modem 2 and not Modem 1 ? (Modem 1
|is restricted to 19200)

Yes, Modem 2, at what is supposed to be 57600 baud. The funny thing
was I downloaded some stuff the very first time I used OVL1316 and
it fairly rattled through it - haven't seen as fast for ages. I
thought the problem was cracked but it didn't last.

I have been having some major problems with this machine recently
and there has been a suggestion there might be a hardware or
firmware fault.

3737. Nemesis Troubles

Newsgroup: comp.sys.atari.st
Date: 1999-03-01 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7bcptg$nc61@news.ajou.ac.kr>
Source record: 83474

Greetings Atari Folks,

As you may have read in a previous post, I am having a
problem getting a Nemesis 25/50 working correctly in my Falcon.

Someone suggested that my NVRAM might be the cause of the
Nemesis board not working. The buffer board is installed
and I have no problems with it.

Does anyone know how to be sure that the NVRAM is working
correctly in my Falcon?

If I can make changes to the NVRAM and they are saved doesn't
this mean that it is working correctly?

One thing my Falcon does have a problem with is keeping the
correct time. It does loose a few hours each time it is
turned off. And will also fall a day or two behind in the
correct date if I leave the it turned off for a few days.

Would this cause the Nemesis board not to work?

Not sure on this, but I have heard alot of Falcons
have this problem with losing some time.

Either way, what needs to be done to fix the clock so
that is does not lose time?

And does anyone have a Nemesis that works in a Falcon
that has this annoying problem with the clock losing time?

Also does anything have to be set in NVRAM in order for
a Nemesis to work in a Falcon?

Any hints, tips, or etc is appreciated.

>
> Do you have some feedback about ATAPI Zip drives?

Yes, several users have them running with HDDRIVER, connected to the
Milan as well as to the Falcon. HDDRIVER supports any ATAPI device,
regardless if it's a ZIP, LS-120 or whatever. As long as devices comply
to the SCSI or ATAPI standards they will work.

This is explained in the online-help you get when pressing the HELP key
after starting HDDRUTIL: Pressing the ALT key during the startup of
HDDRUTIL toggles between German and English. The default depends on the
language used by your version of TOS.

Hi Phantom,

Regarding your slow Falcon clock... My Falcon has the same problem. As long as it's turned on, it's fine. But, if off, it runs slow. I had the problem both before and after my Nemesis installation. I had Alex at ATY install my Nemesis, and decided to also have him install a new clock module as long as he had my Falcon.... but it made no difference! :-(I'm at a loss as to why the clock runs slow. I posted a question about it on the newsgroup, but got no help. If you ever find out why the clock is slow, and what the remedy is please post the info. I, and probably others would really like to know. But to answer your question, YES - I have a slow clock, but it doesn't seem to affect the Nemesis.

As far as the NVRAM... I haven't a clue. Sorry. I hope you get things figured out soon.

Best regards,

Clayton Murray

>much above 38k4 on DTE which means your highest practical DCE is 28k8.

I was brought for me for my birthday.I have managed to get connections
from different service providers from speeds 41k6 to 49k on DTE.I don't
think this modem is flashed to support v.90 but thats what connections I
am getting using x2.

I have been testing all the free isp's to see which one works better for
me and found out that I need one that supports x2 to get the faster
speeds.

That is with a serial port upgrade from TUS.

Gordy.

From: BobKing <robert.king@patent.gov.uk>
Message-ID: <36DAACCA.1AF8E441@patent.gov.uk>
Source record: 83486

An interesting point from a friend who still retains his STE for the MIDI clock precision, but now uses a POWER PC MAC - the availability in iCAB of the advert filter, if present in NETSCAPE or EXPLORER, would have caused the death of the free internet in that majority of WEB pages are sponsored. The filtering is itself easy to implement and was deliberately left out by NETSCAPE and EXPLORER for the above reason. I notice that with the filter in place in CAB 2.5 (ASH) it seems to take just as long for the page to loop out to fetch the various adds and then give you a 'CENSORED' message, as to let them load and display.

BTW any help on setting up SCC.PRG with SETTER.TOS for maximum speed for my Falcon 4M/2.1GHD/28,800Baud system would be appreciated, as the German/English prompts are a bit esoteric (:[

I don't know about the NVRAM......
VERY important that the buffer mod is working:).
All the wires are nice and short, no cold solder joints, and you have the Nemesis grounded to the mainboard ground rail around the outside of the mainboard in at least two locations (Nemesis has an "earth" marking where the wires should attacht).

Before installing the Nemesis, you read the readme file on the floppy. Some of the wiring points/ wire colors have been corrected/changed in this file. The manual does a good job of confusing you going through all the "testing" phase. Check the floppy file aginst the manual a few times.

You cut the trace going into the DMA clock and routed the buffer wire well around the ST RAM card. I installed an inductor (one cut from the COMBEL clock in) at the end of the DMA wire (buffer mod)(otherwords, at the end of the DMA wire I soldered an inductor, then attached the inductor to the clock in line to the DMA). You used the supplied capacitor at that end and tied one leg to ground? You tried it without the capacitor? Should work with it.

You are not using a RAM Gizzmo at speed higher than 20Mhz. You are not using an ST RAM card. (I use an ST RAM card on my Afterburner/Nemesis at 40Mhz no problem, but others haven't had as good as luck).

Get a Wizztronics Falcon RAM card if you don't already have one.

You utilized all the "problem" alternate methods of attaching the clock wires, ie, removing the resistor on the COMBEL clock-in and attaching the input to the top of the pad. The buffer gets its clock from the top of the resistor where the clock exits the COMBEL.

Remove your FPU for now (if you have one).

Modify the serial chips just as the readme file explains on the floppy. No more, no less. Go over the manual and readme file a few times, remembering your reading something that was wrote by people that drink tea at lunch and not coffee:) (just a joke:).

You have BOTH clocks installed in the Nemesis.
>

> Would this cause the Nemesis board not to work?

My Falcon is lazy too (as some internet sticklers have pointed out in my postings:). It has made no difference on three of my accelerated machines.

From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36DAC937.26D8@geocities.com>
Source record: 83492

A while back I saw a newsfile about Jagstudio or something like that.
I figured here would be a good place to find info about Jaguar
development.

First off, I know I guy here in Dallas Texas that has two FLAIR Jaguar
development kits. They were two devices that were basically specific
motherboards that had all the Jag guts built into a PC case with what
looked like a connector to an Atari ST.
Or at least that was what the dealer thought.

He said they went for $300 back in the Jag hayday.

So, I'm curious about these two and what you guys can tell me. They
were... (according to their motherboard)

Flair Rapier 1993
Flair Felix 1993

Can anyone tell me more about these, where I can find software for
them, and how much I should offer this guy for one of these?

Also, where can I find some good Jag discussion groups?

Thanks in advance,

Doctor Clu

If you have allways the same screen resolution, date an time
while the falcon boot up, NVRAM works fine and have nothing
more to do with your nemesis. Nemesis only take master clock
from mainboard and deliver some other clock signals back to
the mainboard.

>One thing my Falcon does have a problem with is keeping the
>correct time. It does loose a few hours each time it is

That's a problem of the NVRAM chip, but that also have nothing
to do with the nemesis, normaly. I don't know anything about
your hardware.

>turned off. And will also fall a day or two behind in the
>correct date if I leave the it turned off for a few days.

Replace this chip with the same type. Sounds like the
internal battery is nearly empty. Remove all .acc and
autofolder software, set time an date, switch of machine
over night. Start machine next day without .accs, aoutofolder
and recheck the time and date. If it's wrong, differen time
is more as 1 minute, replace the chip. Watch out for
solder points, not all pins solder to the mainboard!!

>Would this cause the Nemesis board not to work?

No
Nemesis works perfektly with the wrong time :)
NVRAM settings are not relevant.

>Not sure on this, but I have heard alot of Falcons
>have this problem with losing some time.

Yes, a lot of falcons are more als 5 years old..

>Either way, what needs to be done to fix the clock so
>that is does not lose time?

Make sure you doasn't have software installed that chance
the time setting. Try the procedure upper.

>And does anyone have a Nemesis that works in a Falcon
>that has this annoying problem with the clock losing time?

Yes, i use a nemesis falcon for a half year. Works fine.
You must also have a lok to your ram board, if it's not fast
enough, you allways have trouble by use the higher speed level.
Flickering screen, vertial stripes are all signs for slow ram.

Watch the nemesis manual, i'm sure in the first manual are two
wires wrong. (I think brown, yellow.., can't remeber me)
Must have a look to the manual again. Can't check the installation.
I sell that machine last x.mas..

All what i know about nemesis you can found in DOITF030, and it is
in german leanguage... My problem is to translate them all..

Regards, Robert

3765. Web Server on MiNT

Newsgroup: comp.sys.atari.st
Date: 1999-03-01 00:00:00 UTC
From: Daniel Schaller <Daniel.Schaller@epfl.ch>
Message-ID: <36DAFEA1.8AE99EB@epfl.ch>
Source record: 83502

Hello

Has anyone here had success in installing an Apache Web Server on the Atari using MiNT? I got so far that I can view HTML documents in my Web Browser, but CGI Scripts don't work generally. If the CGI Script is a compiled binary one it works. But when it comes to Shell Scripts it stops. My UNIXMODE environment variable contains the letter "s", so Shell Scripts should be interpretable and thus be executable. As a test I placed a compiled binary CGI Script as /bin/sh just to see if Apache launches a Shell, but it doesn't seem like that. How can I tell Apache to run a Shell to interpret my script? Just to add, the first line of the Script is well

#!/bin/sh

Does anyone have some experience in installing Web Servers on Atari MiNT?

Thanks for any tip!

Daniel Schaller

I've been using WDialog 1.98 with fair success, except that the old DA
Chameleon will not run with it (so, if Geneva is off, I can have DA loading
_OR_ printing). Are the higher versions of WDialog more stable?

Pera, I tried this little workaround and found a TOS image (don't flame me anyone, I've spent hundreds of pounds on Atari gear over the years and I own 1.62 and some burnt out 2.06's which were installed in an older machine) but I kept getting TOS error #35 which apparently means 'not enough handles'? That's a new one!

Any ideas?

jim

On Sun 28-02-99 18:52,
Hallvard Tangeraas wrote about Re: Creating an Atari CD on a Mac?
in comp.sys.atari.st:

HT> I guess, with MagiCMac I don't even need to have it Atari compatible as
HT> it can probably read Mac CDs directly.

Well, from my experience with the MagicMac demo, no. When the machine
is in "Atari Mode" it will not see anything on the Mac's disk aside
from the folder(s) you have set up to be the Atari Hard Drives (if you
know what I mean). Maybe the full version allows you access to the
rest of the disk, but I don't know about that.

HT> I guess I'll have to count the levels of subdirectories to be sure.
HT> Is that 8 *SUB*-directories (i.e. a folder at root level, then 8
HT> directories inside this one inside each other)?

Ow, ow, ow... my head.... Okay, okay... Toast wants everything in a
folder - that folder's first level of contents eventually becomes the
root level of the CD - so it's eight from there; don't count the
parent folder, that's just a convention that Toast uses. Might I
recommend the very excellent "TreeView" for the Atari, that will let
you view the contents of nested folders graphically.

HT> As for special characters, I know one piece of software (a German set of
HT> files called "TP206V38" -TOSpatch 2.06 version 3.8) which contains a
HT> number of files starting with the paragraph (ï¿½) character.
HT> I don't have any problems with these files even on my STe, but it's

HT>
HT> Yes, for files that are common for numerous platforms (text files,
HT> GIF/IMG/JPG images, WAV or AIF sound files etc), but for
HT> .PRG/APP/CPX/ACC etc. wouldn't this just take more space on the CD?

Yup. If yez wants the bells and whistles, you're gonna lose the
space.

HT> Is there any way to *erase* the resource forks from these kind of files
HT> as the Mac won't need them anyway, and the Atari/MagiCMac doesn't use
HT> them.

Possibly MagicMac sees them, and from there you can erase them, but
you'd have to do that before you hand over the hard disk to your
friend. Just don't look at the files from the Mac, as the MacOS seems
to want to automatically create resource forks for every open window.

HT> OK. A single session CD it is then.
HT> If I make an ISO-9660 disk it should be readable on any system.

Yepper!

HT> I'm a little confused about the Toast stuff here (especially as I've
HT> never seen the program before), but the guy who's going to do this for
HT> me just told me to create one folder where I should put the icon and
HT> name of my choice (which will be what pops up on my Mac desktop when I
HT> insert the CD into the drive), then put the files/folders I want as I
HT> want them inside this folder.

Your friend wants to make this as easy for himself as possible. If
everything you want on the CD, in the manner you want it organized, is
placed into one single, great mother folder, which has the icon of
your choice - then all he has to do is drag that into Toast's open
window, and hit the "Write CD" button. Some time later, you have a
nice new disk.

Since these things are so cheap anyway, it wouldn't hurt to write a
couple, for backup purposes. Recordable CDs are a little more fragile
than their commercial bretheren - they don't like heat, light,
humidity - just stick them in a cool, dark place and forget about
them.

HT> Yes, the icons will naturally be ignored by the ST (or MagiCMac), but I
HT> thought while I'm at it, I might as well make it a little pretty when
HT> the CD is used on the Mac (which is most likely in my case as it's the
HT> only possibility right now) :-)

If you want full compatibility, then either write a hybrid disk, or
write one ISO disk and one Mac disk. That way you are assured of
compatibility.

HT about Thing desktop> It's version 1.09, and I know there's a newer version (1.27?) which
I'll
HT> look into later, hopefully it'll make things even more compatible with
HT> the Mac side using MagiCMac -I'm starting to get advanced, trying to
HT> assign icons to the Mac files as well!!! Doesn't quite work with names
HT> where there are spaces between unfortunately, maybe 1.27 will allow for
HT> this!?

I don't think it's Thing that allows you to use the long file names,
but rather Magic, so the restriction is whether or not you have VFAT
enabled in Magic.

So far I have resisted doing this on my system, due to the lack of
VFAT aware Hard Disk rescue and optimization programs for the Atari.
Although there are some now, I just have never felt the need to switch
over - if it ain't broke....

HT> > If you write a straight 9660 CD, and then put it in your Mac, it will

HT> should get icons to show up on the Mac, right?
HT> And it shouldn't cause any problems for the Atari/MagiCMac side, and
HT> rather simply be ignored, am I right?

I just don't know about this. I suspect that all "Use Apple
Extensions" does is write the type and creator codes into any and all
files, so that the MacOS will know what is what. Icon stuff, I
believe, lives in the Resource Fork. Actually, the icons are small
invisible files that live inside the folder they are associated with,
or beside their programs. You can see them in Toast's file selection
window - also in ResEdit's.

HT> Well, I guess without getting too technical (and not knowing much about
HT> CDs and CD writing) I can say that I basically want a Macintosh CD!
HT>
HT> That is, a CD with Macintosh icons, but with the contents being Atari
HT> files which can only run on an Atari ST (or MagiCMac), but at the same
HT> time I want to CD to be fully compatible with any ST where a CD-ROM
HT> drive is connected (which probably means I can use it on a PC as well).

Well then, write a Mac CD with all your stuff on it. No Atari will be
able to read it, but you will be able to manipulate stuff on your Mac
just as you do now. If you want other Ataris to be able to read it,

then write an ISO disk with the restrictions we've discussed - also allowing for any problems ExtenDos might have with directory depth.

If you want both, then write a hybrid disk - that is, two complete sets of data, in two sessions on the same disk - the first being for the MacOS and the last being ISO. Or just write two different disks.

So what's the deal here? Your friend won't let you in the house when he writes your CDs? What, a little "accident" on the carpet the last time you were over?

Regards,

Jos,

I was merely speaking about the "rumor" that Quantums in general won't boot from a TT... my two Trailblazers have no problems at all. This one of yours might be a different piece of cake. I recall my 120 Meg Conner CP30100 (not sure now about the type) refuses to work together with any other drive. It runs OK all alone, not with another one.
What strikes me is the fact that on a Falcon at least it's possible to run it as second. How about on the TT? You might need to stick to the small HD to boot from, but then use the Atlas as a storage disk. Another thing might be it's not single-end SCSI (I had that with IBM 0664 types). Then the drive simply cannot be accessed. HDDriver and Hushi will both see the drive, but cannot do anything with it. I got word that hooking up a differential SCSI device into a single-end chain might cause damage, so beware! Do your docs state anything on what type of SCSI it is? Don't rely on the regular PeeCee dealers, these hardly know what SCSI is, only know the terms "fast/faster SCSI, wide/ultrawide", since this fits into their superduper terminology. Ask them about "differential-SCSI" and they know nothing. It then becomes a matter of "what motherboard do you have?", you tell 'm about "something Atari" and next they suddenly know why it won't work. Talk to Comex Vaals (043-3088400), they know an awful lot about SCSI. OTOH, if Uwe says the drive won't *boot* a TT, I'd believe him straight away. He must have tested lotsa drives... :-)

<7bcsim$9st@chronicle.concentric.net>...
> Hello!
> I have a 520 ST I would like to see if I can get connected to my
dialup
> PPP account- any advice would be appreciated!

Main advice would be to get a memory upgrade: I guess you might *just*
squeeze in STinG and a basic mailer like AntMail, but it'd be *very* tight
(to the extent that you'd probably have to re-boot without STinG to run an
editor with the mailer, if you were lucky). Things are tight in 1 meg of
RAM, you'd really need to up it to at least 2 to make it viable, 4 if you
want to use a recent version of CAB.

If it is upgraded already, I'd recommend:

TCP/IP stack: STinG
Mail transport: POPwatch
News transport: NEWSwatch
Offline mail and news reader: Okami
Web browser: CAB 2.5 or higher
Telnet: TVT102 or Telstar
FTP: aFTP

The references lines are used by newsreaders that do proper message
threading to keep the messages organised in the correct sequence. AIUI even
newsreaders which don't thread properly (eg Newsie, which just sorts by
subject IIRC) are supposed to keep the reference line(s) intact. Many
don't, however, eg Oasis1 and most versions of Oasis2 on the Atari.

AFAIK the only newsreader on the Atari that actually *uses* the references
to thread articles properly is Okami (plus some of the ported Unix readers,
I guess).

> Someone will answer your last question, I hope. I have the problem
> with Everest, which frequently declares it will truncate long lines
> (like the above) and convert nulls to zeroes: in which case I cancel
> the message I was about to write. Have I missed some parameter changes
> I should make in Everest?

Nope. AFAIK Everest always truncates long lines, and it isn't configurable.
Okami gets round this by the simple expedient of not passing the headers to
the editor: they are tacked on when the message is exported to the outbound
queue. This is actually eminently sensible as it removes the possibility of
manually mangling the headers. You can add any extra headers you like
anyway by configuring them in Okami's setup file.

The Atari will by default go down the list of Drive addresses until it finds a bootable sector (there is software that can alter this). On my Falcon, SCSI 0 points to a Syquest, SCSI 1 is a fixed drive with an autoboot file. If my syquest has an autoboot, it takes predominance. If not, the Falcon has no trouble finding the fixed drive's boot instructions.

I am not sure, but I think that IDE has priority over SCSI on a Falcon.

I bought a program from Ben two years ago.

I thought the service was average. I didn't think the product was working, and when I tried to get answers, they weren't forthcoming. To say the least, I was a bit nervous about the deal.

It turns out the problem was on my end. I figured out where my mistake was, on my own, and I got it working.

He had what I wanted. He sold it at a fair price. He shipped it out in a timely manner. He did not provide service after the sale, he went very quiet.

That is my review of Bravo Sierra. I would consider doing business again if there was a special reason, so far I haven't.

>The Buffer installation went fine, no problems there.
>I used the inductor from L102.

That's ok.

>However, I have had strange problems with the Nemesis installation.
>The Midi and IKBD modifications is where the trouble starts.

Make sure you ONLY cut pin 3+4 of the ACIA chips.
(Connect them with the right nemesis wire)

>I turned on the Falcon, the Fan runs, the IDE drive does not. The Ide
>drive would not spin up or make any sound at all. I got a white
>flash from the monitor, then nothing not even a black screen.

If nemesis is off, they must pick up master clock from mainbaord
and put clock back to the mainboard, not more. If that doast' work
well, some wires wrong or nemesis is defective.

IDE doasn't spin up without nemesis returned the clock to the mainboard.
Same as with your display.

>I then removed the white wire from the temporary ground, leaving it
>not connected to anything at all. Everything else is as the manuals
>state. Booted the Falcon....

Recheck connections to (both) ACIA chips!

>Fan runs, IDE drive spins up, the 17' SVGA monitor gives a black
>display.

Listen the video modification.

>I tried many different things and took notes but I could never get the
>Nemesis to work right. I can't get passed the First Nemesis Test.

Don't worry. If i fit the fist nemesis i need two days to found out
my own mistakes.

>So after many hard hours, I removed the Nemesis, and reversed all the
>modifications except for the Buffer, for the 4 or 5th time.

Buffer must not removed. Falcon also work with the buffer only.

>Can you tell me what the problem with the Nemesis is from what I have
>described?
>If there are any other details I can give that might help

>you determine the problem then let me know.

Some wrong connections or devective nemesis board.
(Sure you insert the clock oscillator well?)
(But that have nothing to do with an offline nemesis, falcon must
work as a orignal falcon if nemesis is installed an off)

>If you cannot, Can I return the Nemesis card to you for repair or
>replacement?

I think that's the best way. Otherside, i'm sure you have to
wait some month for any response.. (Sorry, that's my last result..)
(I'm wait 7 month of the last year for a simple bullshit apex update)

>Also, Months back I sent my original Apex Media disks to Systems For
>Tomorrow along with payment for the latest Apex upgrade. It is my

Tss..
Have a look some lines upper, you are not alone.
The point i doasn't buy anything again from Titan.
Also i cancled my order for 3 years old apex alpha.

And if anybody are intressed, i got my apex o-disk (other serial no!)
back last atari fair in neuss from "uncle davi" himself..
Saves the p&p for one disk? :->

"Don't ask us again and again for your apex disk, we are busy with other things.."

No further comments.
That says all.

>I have exchanged e-mail with David in the past and even called him
>on the phone several times when I ordered replacements ICs for
>my Expose Splitter. I did get those and they work quite well.

You are not alone..

>But I do think I should expect a little more communication

Considerably more!

:-)

In fact we sell over 100 in the USA alone!

And the USA is a 'minor' market relative to the UK and Europe where the ST/Falcon ranges were more popular. Don't forget that we have very sizeable clusters of AC readers in most European countries and Australasia, and a few scattered around elsewhere on the planet.

If we only sold a hundred we couldn't continue to pay the bills and we'd be forced to shut up shop!

Kind regards

Mike Kerslake

>to be expected of course. I do not think you will ever know for sure.

Issue 1 of AC sold 1300 copies - a complete sell-out. Four other issues are complete sell-outs and there are limited stocks of all other back issues. It's not possible to give totally accurate sales figures at this stage, but you're being more than a bit negative I think!

>but let us face facts. how many of us are there?

A lot more than you can obviously comprehend or count that's for sure.

Why not be a bit more positive and optimistic Alf - it doesn't hurt!

I had exactly the same problem with the clock on my Falcon. I then decided to have a Nemesis installed by Titan Designs. When I took it down to be installed I mentioned the clock problem and they suggested it may be the whole clock unit gone phut and it might be too much hassle/expense to fix. Anyway a few days later the Falcon came back to me with Nemesis installed and the clock working perfectly - like I can switch it off for days at a time and it keeps on working - so I called Titan and said thanks for fixing the clock problem and they said: 'We didn't fix it or touch it' !!!

Anyway, two years later both my Nemesis and my clock are still working just fine!

Hi John,

Certainly there are some known hardware problems with Hades machines. Martin Byttebier has just had a motherboard problem with his and it lost him a lot of data off his hard drive. So if you suspect there could be a problem I suggest an urgent back-up of data .... (Which you've probably done anyway !)

Cheers

Paul

There was probably some error by download of PRG files. Some systems treat
files with
PRG extension as textual files, and download incorrect them. Try with
download of ZIP file (Download both loaders) .

Ok, about exactly one month ago, I was whining about the SECOND APEX
MEDIA disk that wasn't in the package when I purchased my Falcon, second
hand. Well, I thank those who sent me the appropriate file to get me going,
and it worked perfectly.

Ironically, I FOUND the ORIGINAL disk. Well, I think it is.
The file APEXSYS.TOS (A self extracting archive) was located on my
PHASE IV PHOENIX DATA/EXAMPLES disk. Well, now I have verified I had the
proper match:-). Anyways, I was confused as the 1st disk was a BLACKSCORPION
BLACK LABELLED DISK, and the second disk is a LEXICORE PHASE IV DISK.

Also on this Lexicore disk are some examples and some demo programs.

One program creates a 2meg virtual disk from drive d:.
The other program is a software version of Blowup.

Can anyone tell me if these programs are somewhat useful or if they can
really cause damage. I would like to use the BLOWUP software demo, but
I am a little afraid. I do have a multisync monitor with my falcon.

later
Brian.

Hi,
What kind of problem do you have?
You may have a problem in your mixermaps, with the faders being set to
"Sampler" instead of "DSP" as they should be...
This was a faulty mixermap which was delivered with a previous version
of CAF and still makes problems for a great deal of paople.

You might be able to use NEWsie for Email/newsgrps and FTP, but CAB
(the atari internet browser) requires more memory. You will also need
a dial program such as STING or STICK. If you are only running from
disc, it might be very difficult. Here is The Atari Quickfax:

Atari Quickfax location:

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA/HTML)

An exerpt from the quick fax:

4.2 Can I hook up an ST to the Internet ?

The ST can be used to send and receive email, read Usenet newsgroups,
download from FTP archives, and even to surf the web. For this you need:

- a modem : machines up to STE included are limited to 19200bps, unless
modified.
- a subscription to an Internet access provider, who must provide SLIP
or PPP,
- a TCP/IP layer : STiK (SLIP only) or STiNG (PPP/SLIP), or MiNT with
MiNTnet,
- a Web browser : CAB 1.5 (freeware), CAB 2.x or WENsuite (both
commercial), or Chimaera and Lynx under MiNTnet.
- a News/Mail reader : Newsie or Oasis

There are a whole lot of information resources on the subject. A good
start might be to check out the following pages :

Mille Babic's home page
http://hem1.passagen.se/atari/

The STiK support page

>PPP account- any advice would be appreciated!

Well it is what I use, so I will give you as much info as possible.

You will NEED.

1) MEMORY. Get as much as you CAN. (1 meg will suffice, but get MORE).
512K may get you connected, I am not certain anymore, it used to, but
then you can't do much.

2) STING for PPP.
3) HS MODEM for Hi Speed modem access.
4) Xcontrol Panel, for STing.
5) CAB for WEB BROWSING. 1.5 is FREEWARE (I use) and 2.7 Demo (I use too:-).
6) NEWsie for all in one FTP, NEWs, EMail, and low feature browser.

There are other programs but I haven't tried them with TOS 1.0.
7) A HARD DRIVE. No point downloading webpages to floppy.
(I did this when starting;-).

8)CAB OVL for CAB. I use version 1.2805 with version 1.5 of CAB.

You will want.
1) More more and more memory:-).
2) Really LARGE HARD DRIVE. (Gotta put those South Park Avis somewhere:-).
3) TOS 1.4 or Greater or a Multi Tasking OS like MAGIC. I haven't used
Mint nor Geneva on the ST.

You will look for

1) ST GUIDE when you discover most manuals for the internet are in this format.

Hope this helps. Its all I can remember offhand.

The following is possibly a silly question, but I am going to ask it
none the less.

Senario:

TWO computers with Syquest/Zip/Jazz (Take your pick) Hard Drives.

Computer A).

520ST with 2.5 Meg of Ram and EXTERNAL SYQUEST Removable DRIVE ONLY.
Auto boots off SYQUEST Cartidge.

Computer B)

Falcon with IDE internal Drive and EXTERNAL SYQUEST removable Drive.
Auto boots off IDE drive.

Now my question is:

What happens if I take the Syquest cartridge from the ST with the
HDRIVER.sys file (Example only, can be any bootstrap;-) and place it
in the Syquest mechanism in the Falcon, then boot up the Falcon?

There is a Bootstrap on the IDE and on the SYQUEST? Which one will
take priority should I not or forget to change the filename of the
hddriver.sys file on the syquest cart?

Could it accidentally boot off the syquest first and ignore the IDE drive?

Thanks.
Brian.

3793. CAB/BIG SCREEN/MORE COLOUR FOR ST

Newsgroup: comp.sys.atari.st
Date: 1999-03-02 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <xHKC2.205$SY3.474@198.235.216.4>
Source record: 83515

Just incase no one else has bothered, I have successfully used CAB/STING/
BIG SCREEN on my ST with the SC1224 colour monitor. This allows the ST to
get the FULL 16 Colour CAB provides to the STock TT configuration.
Web Pages look prettier and you get FULL access to the pull down menus
within CAB that you don't get when using CAB in ST low (not that anyone
would other than me:-).

However, it takes some getting used to, all the screen scrolling, but once
you are used to it, it is not a horrible experience.
I recommend you use this combination with a TRACKBALL and just spin it around
the screen:-).

Now if there is anotherway to get 16 colours from within CAB on a STOCK ST
I would be happy to know how. Even on a modified ST:-).

Later
Brian.

3794. WTB (Halifax NS area) Canon BJ10e

Newsgroup: comp.sys.atari.st

I already posted this on the geographically locallized .forsale newsgroups, but response has been almost non-existent. may as well see if the Atari die-hards have one for me.

I already have a Canon BJ-10ex, but it had a shelf fall on it. Really. I managed to get it back together, but it has never been quite the same as it was.

Looking for another one; maybe even two!

I am in in Eastern Canada, sort of near Boston in a global sense.

Also, straying off-topic: Does anyone know what printer drivers are now avvailable for Calamus SL? I know that the invers Software Betreib's e-press releases have touched on this lately, but it is hard to keep track, unless one has a mind like Rich Tietjens. Rich, where are you?

Surely there must be one cumulative list somewhere. I was in a big-box computer store today and looking at 2 dozen printers, and trying to remember if any of them were compatible with those new Calamus SL drivers.

You will still have to assign a folder for MagiCMac to see the disk. It won't all be accessable as a drive. Hint. Limit your sub directorys and install all your files in one folder. It will take some effort on your part organizing your image. I still think that ExtenDos will run out of memory at some point if you have to many files in one directory. Put no more than 256 files in the root directory unless your using HD Driver to modify the option (or MagiC takes care of this, I don't know about MagiC). Best to do what Frank advises and just create a standard ISO CD.

> HT re: ExtenDos> What's too long? Is there a total character limit?
>
> I dunno. I've never determined this.

I did some beta testing on the update patch that Roger has posted. I don't recall the character length, but I think it was compatible with one of the MiNT options (32?).

>

>
> Then you are talking about an ISO 9660 disk.

I agree. Keep it simple. I made about five different disk before I was 100% Atari compatible.

> HT> Is there any way to *erase* the resource forks from these kind of files

> to want to automatically create resource forks for every open window.

Egad, stay away from the Apple file system. Under MagiC Mac it will cause
nothing but trouble. One time you will drag a file to the desktop off the CD,
then remove the CD and put it away. Then you will try some operation that
requires the file and the damn Mac O/S will want the CD re-inserted to
perform the operation under MagiC Mac (just as it would under the Mac O/S).
That may not be technically accurate, but the trouble part is.

>

Right, or MiNT. However you will have to have a file selector that supports
long file names. I know nothing about MagiC and what it uses.

I would do it this way. Format a hard disk under MagiC, DOS compatible with all the extras you will need to do this (HD Driver, Big Dos, ect) on your Atari. Set up the image how you would like it to look like on your CD. Remove the SCSI disk from your Atari and write protect it before connecting it to the Mac. The Mac should be able to read the DOS hard disk without problem, but will not be able to screw with the file system. Burn an ISO disk. Once done, have your buddy copy the files to his Mac and do all the fancy stuff you want for a Mac CD and burn another. Best of both worlds. If you install MagiC Mac on your friends Mac, and launch an application under MagiC Mac, it will remember that application as a MagiC Mac application and always try to start MagiC Mac when you select it. That causes problems down the road. Best to write one "Atari" CD before the Mac can modify the filesystem.

:) What some people won't do when they are hard up for a floppy....

>
> Also on this Lexicore disk are some examples and some demo programs.
>
> One program creates a 2meg virtual disk from drive d:.

I haven't seen that one. Generally Lexicore software is compatible with the
Falcon, but with bugs and limitations. Anything that could cause data loss I
would stay away from.

> The other program is a software version of Blowup.

Blowup, probably the demo, won't hurt a true multisync monitor. The demo
doesn't give you many settings to play with. There is a great piece of
shareware that is much better. I <think> it is called Falcon Screen. As long
as you have a wide band multisync, there are not to many settings that can
cause damage. General rule of thumb, if your monitor goes black, or into a
60's color display, shut it off and reboot quickly:). Double check that name
as it doesn't sound quite right to me now.....

These will be DCE speeds (modem-modem). What I was getting at is that
you generally need a DTE (modem-serial port) speed of around 3 x DCE
otherwise it will be the predominant bottle-neck.

Hello everybody,
Recently I bought an IBM harddisk, made by Quantum.
So it's a Quantum Atlas XP31070W SCSI 1.12GB .Uwe Seimet says it cannot
boot on a TT030 and more people say that.But others like Louis H.
tell different stories.So I wonder if it's still possible.
With HDDRIVER or another harddiskdriver perhaps ?
In my Stacy sits a Quantum 50 MB and works perfectly.Louis has a Quantum
Trailblazer and it boots and works perfectly.
So if any body will react to this problem, I would be very thankful !!

Jos Vlietstra, email <jovlie@xs4all.nl> - My collection :24 X Atari 1040ST,

Source record: 83527

The ST had the whole of it's operating system on ROM. That consists of TOS (the underlying OS) and GEM (the graphical interface).

A genuine ST will therefore not require either of these on disk!

If your friend is trying to run an ST emulator on PC such as the Gemulator, PacifiST or Winston, he will need a TOS image (which is the copyrighted part and therefore not supplied with the emulator).

You can find these on the net though - try The Little Green Desktop at http://lgd.fatal-design.com/

This site has all you are likely to need.

3807. Newton's Atari?

Newsgroup: comp.sys.atari.st
Date: 1999-03-02 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36DBBA93.4015@geocities.com>
Source record: 83529

Hehehe.. a far cry from "Newton's Apple" I realize, but for me, the best of two worlds. I'm a recent convert to the Atari ST world since I am having fun making an Atari computer be my main computer more and more each day. Atari was the best desktop computer in my opinion, and it makes home computing fun again!

Then there is the Newton MessagePad, the best PDA ever made. Like the Atari, the Newton has no support from it's company, and so therefore the Newton community is in many way like the Atari community.

So I was wondering what has been done so far to connect a Newton MessagePad and a Atari ST.

I believe the Amiga has rigged up something... just wondered where we are on this.

Though I'm fanatical about practically all things Atari,
The Portfolio is no where CLOSE to a Newton. ;)

Galen, appearently I'm on 1.98 as well. No problems at all (with MagiC
5.01).
I got the 2.0 version too, including extensive docs in HTML format, but it
was reported to be buggy very soon after it was released, so I never used
this version. I believe (stressed, that is) that 2.01 is out, perhaps a
higher version. No experience with these.

Now, my tower with all the SCSI gear is producing irregular whining noises
and is vibrating more than usual, I gather the PSU fan is giving up slowly
after been running for around 3 years continuously (cheap model...). Gotta
switch it off when I go off to work just in case, but I wonder what will
happen on the next start tonite... I think I need to get a replacement
first thing tomorrow :-)

> Has anyone here had success in installing an Apache Web Server on the
> Atari using MiNT?

Yes.

Let's check a few things, before we go any further:

First, do you run this on a full MiNTOS setup with Minix filesystem?
If not, it might explain a few things...

Second, do you have appropriate symbolic links to the hierarchy in
your MINT.CNF to point to the /bin /usr/bin and /etc hierarchies?

> I got so far that I can view HTML documents in my Web Browser, but
> CGI Scripts don't work generally. If the CGI Script is a compiled
> binary one it works. But when it comes to Shell Scripts it stops.

Do you have an /etc/shells file? Does it include SH and BASH paths?

> My UNIXMODE environment variable contains the letter "s", so

Typically, we recommend: /brUs._

I have dealt with Ben Smith on about 6 purchases over the last 3
years and have been very impressed with his professionalism and
speedy deliveries. He also has given me free items on two occasions
when he wanted to be rid of them. In all honesty, I believe he is
one of the best small business operators I have ever dealt with.
I usually get the items I ordered in only a few days. Try comparing
this to ICD! I currently have been waiting since Sept. of 1998 for
my link 2 to arrive and still no response -- I've even talked to the
owner several times on the phone to no avail. You will never
experience this type of poor customer service with Ben.

Je cherche ï¿½ rejoindre Vincent Pomey (l'auteur de ST-ZIP) et voudrais
d'abord vï¿½rifier si quelqu'un aurait sa plus rï¿½cente adresse e-mail?

Il y a un pï¿½pin avec ST-ZIP, concerant les long nom-de-fichiers, qui
nï¿½cï¿½ssiterait vï¿½rification auprï¿½s de son auteur, histoire de comprendre
pourquoi ST-ZIP distingue les MAJUSCULES des minuscules (ou un mï¿½lange
des deux) avec le VFAT des kernels 1.15 ou le ramdisk FNRAMFS, mais les
ignore depuis une partition Minix ou la hiï¿½rarchie unifiï¿½e (disque U:).

En gros, la colonne de droite montre correctement les long noms-de-fichier
avec un assortiment de majuscules et minuscules, mais seulement lorsque
l'on est sur une partition NEWFAT ou sur le ramdisk FN; le disque U: et
les partitions Minix apparaissent en noms tronquï¿½s 8+3 tout en MAJUSCULES.

Puisque ca marche sur FNRAMFS et NEWFAT (tous deux des systï¿½mes rï¿½cents),
il semble clair que Minix et U: ne supportent pas certaines fonctions (ou
retourent la mauvaise rï¿½ponse), mais sans l'aide de Vincent ils serait
difficile de dï¿½terminer oï¿½ est le problï¿½me...

La mï¿½me situation existe avec 2-in-1, ImageCopy et Papillon, aussi.

First versions of Atari ST didn't have built in TOS, just bootstrap
routines. This was Atari ST 260 e.g.
Perhaps Adrian writes about such model.

I also have a Nemesised Falcon and the clock runs slow. However this
cannot be due to the Nemesis installation as it has run slow since it was
brand new approx 4 yrs ago.
It is annoying but I've got used to it. If there is a way to correct the
clock I'd appreciate hearing how.

Only one candidate for #1: M.U.L.E.

I'd like to see the gameplay expanded a bit, and a few more options
added, longer games. The memory of the 8-bit systems was probably the
limiting factor there.

Prettier graphics wouldn't hurt, but the gameplay was so good it made
up for any lack of eye-candy.

He is mistaken. You do not need a boot disc for the ST as the TOS is
always there (in ROM). You had better clarify what he REALLY wants.

I wished I had take a back-up more often. Like Paul said I recently had a
very serious problem.
The culprit seems to be a weak design of the motherboard. Especially the
solderings around the big square Xilinx chip are vulnerable for breakage.
However the solderings only broke when I was at my dealer to repair my ill
Hades.

My initial problem was a dead IDE harddisk. This was caused by a dead diode (or
whatever that thing is called).
Somehow this has make my HD unusable so I was forced to repartitionated my
HD. Unbelievable but true but I also had a bad IDE cable.

Modem 2 can go up to 230400 baud. On my Hades I use 115200.
IMHO your troubles has nothing to do with an ill Hades. For me it seems
more a problem of your settings (or maybe a problem at Zetnet).
Also be aware that some sites are very slow. For instance I've very slow
downloads from all the www.multimania.com pages (French)

The latest version is AFAIk 2.04. You can find it on the homepage of 2B
http://home.t-online.de/home/ToBeHome/homepage.html.
This version should be on the Belgian FTP-site too. 193.190.205.13 atari
V2.04 seems to work much better then the previous versions. Everything
between 1.98 and 2.04 should be ignored.

Once upon a time... I did read that a JVM had been written for the Falcon for
an in-house project but that it was not available for public consumption.

I read it in one of the British Atari mags. I tried to find it a few weeks ago
in answer to another question but failed. Does anyone else remember this,
maybe the author is still in the atari scene?

Have you had a look at the Kaffe distribution for Mint?

3823. Re: Creating an Atari CD on a Mac?

Newsgroup: comp.sys.atari.st
Date: 1999-03-03 00:00:00 UTC
From: Dennis Vermeire <dennis.vermeire@ping.be>
Message-ID: <920485734-384350AEicMi@ping.be>
Source record: 83345

Hi Hall,

Adding my bit to the confusion.....-))

If you gonna burn the CD in ISO9660 format, which is very restricted
you'll have a lot of editing to do....

I suppose like most of us you have folders on the harddisk which do not
follow the ISO9660: eg: TEST.101, TEST.1_1, VERSION.1A etc...
ISO9660 accepts 8+3 only for filenames but not for folders, folder can't
have extenders...
The maximum nested folders allowed under ISO9960 is eight... this may
sound like a lot, but in fact isn't:
DTP
CALAMUS
VERSION98
DOCS
PERSONAL
CDK
WORK
NAME
And that's it..., and this is not a extreme example, a lot of apps work
like this, not to mention prog.languages which can have a lot more,
Megamax uses 14...

So if You want the CD to be in ISOxxxx format, You will have to check
every folder & file on the harddisk. And believe me, I speak from
experience here -))), it's very easy to overlook some files/folders.

IMHO the way to go is this.... let the guy burn the CD in HFS, let him
make two copies. Then ask a atari user to burn the CD again but this time
in 100% Atari format. Reading a HFS formatted CD and writing it in Atari
format takes just one mouseclick...
You'll end up with a CD which all atari's and emulators will be able to
read, and you don't have to worry about the ISO rules either.

Oh yes, another thing, if you want to give the CD a name, you can't use
extenders, but you're not restricted here to eight characters they have
to be in uppercase though

To get a good idea about what you're facing, download the CD RECORDER PRO
demo from http://www.soundpool.de and give it a testrun on your harddisk,
setting ISO, DOS, ATARI or don't care.... you'll be amazed...

Cheers from Belgium

Dennis

I have it the other way around with a Quantum ProDrive.

Pleas describe 'won't boot'.
Does he see the drive? Does the motor spins up?
Try with HDUtil from floppydisk to see if the SCSI ID is seen and the
name.
If not: SCSI-cable problem probably.
Sometimes the internal harddisk goes ok without a terminator
sometimes it needs a terminator on the drive itself. (jumper)
Also try to see if TT has SCSI ID 7 and parity and send unit
attention etc.

> take priority should I not or forget to change the filename of the
> hddriver.sys file on the syquest cart?
>

The TOS goes looking for a bootable drive. On TT I know it starts
with SCSI 0 and so on.
With Falcon I think that TOS starts with IDE 0.
Please other readers, correct me in this when I am wrong!

The first drive found will be searched for a executable boot-sector.
If that one tells to load HD Driver the boot can go on.

Then it depends on the way HDDriver is set what happens next.
First important thing: with drive numbers are searched further for
partitions and what is the ordering (needs not be SCSI 2 SCSI 5 but
can be SCSI 5 than check for SCSI 2).

After this you reach the point where all partitions are found and
given a letter.
Then you can tell from which drive he has to boot by pressing a
letter on the keybord.
Do you want C (that is normal) or do you want partition E to be
the one from which the auto-folder content and the accessories are
loaded from.?

But think: many programs are so stupid that they think for themselves
that the bootdrive is always partition C.

You can take the assignment of drive letters in your own hand. There
is a form that let you specify that if booted from SCSI 0 then the
partition lettering starts with say C and SCSI 1 partition letters
start with say H.

The way I do it with a TT and a Syquest is:
have made internal drive SCSI 1 and Syquest SCSI 0.
When a bootable disk is in the drive, boot takes place from disk
Syquest. No disk or a non-bootable gives boot from internal HD.

But your IDE drive makes this very difficult to use I think.

Asked Uwe Seimet about it?

3830. Re: One of these days... MiNT?

Newsgroup: comp.sys.atari.st
Date: 1999-03-03 00:00:00 UTC
From: atarist@xs4all.nl
Message-ID: <7bk1q0$191$5@news2.xs4all.nl>
Source record: 83352

Until now:

As instructed I made the installation of the MiNT98 from CD-ROM to an empty TT.
I found syntax errors in the mint.cnf and repaired them with QED.
I could not use the CD-ROM and installed SPIN for it.
I could not figure out (and I looked into the manuals) if HSModem was before or after MiNT in the auto-folder.
I placed nohog.acc in the boot.
I was back to single TOS and programs worked normally as before.
I could not read the scrolling messages from MiNT during boot.
Tried to log them with autoMore, but that worked for all messegaes except output from MiNT.
I tried to read some manuals but the eol-problem made the built-in viewer of the TOS-desktop unusable (show/print/cancel).

So now the next chapter: adminstration of the network.
Translated quote from manual: "The AdMiNTools are HTML-WWW-based and need a running webserver and a WWW client that can handle the MiNT-Net TCP/IP interface".
Luckeyly the writer comes down from upstairs in the next sentence: "on the CD there is for this purpose a CAB 1.5 in folder contrib/cab (in realty contrib/cab15) in installed form so you can go on with the configuration immmediately".

I try: 2 bombs.
After many tries in amny ways and many messages from CAB I reach a point where I can type in the needed URL http://localhost/admin/
"cannot file file/folder" is the answer. To make a long story short (put Cab on drive C because of complaint about " c:\cab15\home.html not found" and "error u:\usr\local\wwwcache\b\00001" I realize:
the manual says that automaticaly I start up with the webserver httpd. may be I do not.
So after renaming httpd to httpd.ttp (I am with TOS) and giving parameters -r/var/httpd/config/httpd.conf something happens.
But: 'path not found' is the message CAB returns.

Then I realize that I can not use long filenames, case-sensitive things etc. with my TOS. Would that be the problem?
Because even html-files from the adminstration stuff (on the Minix partition) can not be loaded as html-file in CAB :" error when loading file" is the result.

Although the manuals states: 'When you want to use the built-in operating system put Nohog.acc on drive C:"
you cannot seemingly configurate the network when TOS is in use.

Maybe there is a good reason for the packaging together of MiNT98
andN.AES for a extra cheap price. You need both?

So I conclude:
Installing MiNTNet (medium distribution) from the CD on a TT and
keeping TOS is NOT possible. There are more reasons then one for this
failure.

I will continue:
The TT will be totally cleaned again and a 'nano-distribution' will
be set op. Then I only can import drive and not export them, but it
should be a start.

Any comments on the whole story until now are welcome.

Are there any specialist around that know a way how to read the
scrolling messages from MiNT when it boots?

Can anybody tell me where to place HSModem (before or after MiNT)?

What is rsvx.prg supposed to do between HSModem and MiNT?

Met vriendelijke groet,
Ronald van der Kamp

3831. MAME - Is an Atari version planned?

Newsgroup: comp.sys.atari.st
Date: 1999-03-03 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <36dd858c732cf0@the-gap.demon.co.uk>
Source record: 83353

I've just been playing with MAME (Multiple Arcade Machine Emulator) on a PC,
and it's awesome! As it's name suggests, it's an arcade machine emulator
that allows you to play the actual ROM code of favourite arcade machines
such as Williams Defender, Zaxxon, Scramble etc.

I've noticed there are versions for Acorn, Mac, and Amiga, but as usual no
Atari version. I guess an ST wouldn't be up to it, but I see no reason why a
Falcon version shouldn't be comparable to an Amiga version (assuming the
Amiga version is actually any good speed wise).

The source code is freely available, but it's C which isn't my bag.
Has anyone looked into this before, or fancy a new challenge? ;-)

Gary

Before.

> What is rsvx.prg supposed to do between HSModem and MiNT?

Mess things up ;-) Don't use it.

Seriously, this is what rsvx does:

When MiNT starts, it detect the presence of RSVF serial-drivers (HS-modem) and use these for it's own serial-devices (u:/dev/modem*, u:/dev/serial*, u:/dev/tty*). Some applications will also detect RSVF-drivers and use them directly, thus bypassing MiNT's device-locking. This is a Bad Thing, unless you really know what you're doing.

To prevent this MiNT kills the RSVF-cookie, rsvx.prg is a hack that reinstalls it if you have a program that *needs* it. Most RSVF-aware/dependent programs will also use MiNT's serial-devices too, so rsvx.prg is very rarely needed. If you have an app that won't work without it, be very careful so you don't get conflicts between RSVF-apps and "proper" apps.

AFAIK there's no such thing as a "100% Atari" CD-format. Why not just stick
the HFS-CD in the ST's CD-ROM and read it directly? Spin! does this without
any problems at all.

3840. Scroll Arrows problem in MagiC6

Newsgroup: comp.sys.atari.st
Date: 1999-03-03 00:00:00 UTC
From: cstanley@zetnet.co.uk
Message-ID: <7bkiakbuj1@roch.zetnet.co.uk>
Source record: 83362

Hello MagiC fans.

In MagiC6 on a TT, with NVDI 5, clicking any of the scroll arrows brings me 2 bombs, disables the deskmenu, the scroll bars and the Alt^Esc manager, and the mouse has no effective control. It always requires a cold boot to get started again. The problem appears in these applications:

Newsie 0.94, CAB 2.7, Texel 1.6, Works 1.207, EdHak 3.01, PageStream 2.2uk. Even in Protext 6.5, using some commands produces the effects.

Some other apps are not affected, but I haven't the patience to go through my whole collection :)

Any ideas? Solutions?
Please?
Charles: about to click the arrows in Everest 3.6e, where I am now.

PS. yup! Everest has the problem too.

Silly me! Of course I had overlooked the parameters. All is now fixed,
unless, of course, that reference line is more than 300 characters, which
Everest will curtail, so that's no help. :(

3847. New Calamus SL printer drivers?

Newsgroup: comp.sys.atari.st
Date: 1999-03-03 00:00:00 UTC
From: db361@torfree.net
Message-ID: <F7zzt8.8Cw.0.bloor@torfree.net>
Source record: 83411

I posted this under the main text of my WTB posting, so this time it's out in the open, and therefore less OT.

Re: those new printer drivers for Calamus SL which are coming in from invers Software Betreib: How many relatively up-to-date Calamus SL printer drivers are out there, anyway? It is hard to keep track. I say that because several of iSB's e-press releases have come in lately, and Howard Carson of MGI sent one out to the faithful about a month ago.

I went to a big-box office supply warehouse the other day and saw a bewildering array of printers, some of which were backwards-compatible with W.3.1 amd, presumably, therefore could have a Calamus .CDT written for them. I wished that I might have had a better head for figures and model number designations, or else I should have written everything down.

While I enjoy working in Calamus, my SLM 804 and Canon BJ-10e printers are both old and creaky. I lust after that 600 or 720 dpi spec of the new gear.

Advice please, ladies & gents.

Hello,

I don't have my TT setup to surf the web anymore, so I am unable to check out my web pages. I have been setting up a new Atari domain, whenever the Internic Transfers the name, it will be available at www.atari-users.net (NOT YET!)

For now, I need people to check the site out with Cab.
I have set-up a html based chat room with and with out frames,
A Yahoo(c) type Links Engine,
A Forum / WWWBoard that uses Frames
and a Web Ring section.

The site is still under construction (Be kind). A few problems are known with the cgi or server in the links engine..
If you do find a problem, please use the e-mail address on the sites homepage.
In the e-mail, PLEASE explain the problem with as much detail as possible.

The "back door" to the site is... http://atarinet.virtualave.net

ENJOY!
Rob

I have installed, Magic 4 and NVDI 4 in my 520ST with 2.5Meg of Ram.
After running Autos & STing, I have just 1Meg left according to my Sysinfo
cpx. In this 1 Meg I am able to Run CAB 2.7 Demo with graphics on quite
comfortablly. Which confuses me as I thought it would be very tight. There
appears to be little difference from when I operate with 2MEG of ram and
TOS 1.0 after loading just autos. However I have noticed after roughly
8 to 11 Web pages, I get a memory error, of course I hve the ram cache set
to 4 meg:-). So, 4 megs would be great, but I am working fine with 1meg.
Now with 1meg only I don't think this would be possible with Magic/nvdi, however
it should be fine in single tos. I will experiment this weekend, and make
my 520ST a 1meg machine and see what happens.

I don't know about anyone else, but here in Canada, in 1987 Atari Manuals
still claimed the ST had a BOOT DISK. Drove me insane, looking for this missing
disk that never existed after TOS was in ROM:-).
Only disk that came with an ST isn't worth having, unless you need a disk and
feel like formatting it and putting something good on it;-).

John,

The printer drivers with SL98 include just about all of the latest HP printers and Epson Stylus (supporting both 600 dpi and 720 dpi). The complete driver package that comes with SL 98 is available on the invers web site (free download). These printer drivers, I think, are backwards compatible to at least SL94. There is also a new driver for the Epson 1500 (wide format printer) also available on their web page. Invers also has a complete driver package (not free) that supports the latest Epson printers (800 series). Additionally there is a module available from Adequite System that will allow printing from Calamus SL via NVDI.

You can subscribe to an e-mail based news system from Invers, also. I get at least on e-mail (sometimes more) a week from them having info on up coming versions, modules and driver updates.

go to http://www.calamus.net

> my TT030 .Is there anybody who did succeed with this model of Quantum and Atari ??

Like the Quantum Fireball drives the Atlas also might require initiator
identification. TOS doesn't provide this feature and thus can't load the
hard disk driver from this drive. So this is no a problem of your
drivers but of TOS. You have to patch your TOS in order to solve this.
Or simply boot from another drive.

3857. Re: Creating an Atari CD on a Mac?

Newsgroup: comp.sys.atari.st
Date: 1999-03-03 00:00:00 UTC
From: Oliver_Schildmann@LU.maus.de
Message-ID: <199903030000.a57045@lu.maus.de>
Source record: 83421

Hello Hallvard,

h> I think this is a limitation to Thing or perhaps MagiCMac as it's
h> probably not meant to let the user access Mac style filenames.
Spaces in filennames are not illegal to MagiC Mac. But many Atari programs

have trouble with "quoting" the parameters (or with receiving quoted
parameters) which is neccessary if within the path are names with spaces.

h> So, as long as my STe accepts it from its harddisk, I guess it'll
accept
h> it from a CD ;-)
But that is *not* the question. The question is, will Toast accept it? And

the question is not, will Toast accept it because it's a Mac program (and

because it's Mac, it would accept even a picture of your grandma as a
legal
filename ;-)), the question is, will it accept it, because it's simply not

allowed on an ISO-CD? :-o The answer is no.

h> True, but if I already have the space it doesn't matter ;-)
h> 650 Mbytes is quite a lot on the Atari platform, and for this CD I'm
!!! For sure! 8-))

h> Good, but will I be able to add Mac icons to the folders and the CD
h> itself? Excuse me if I've asked the same thing before and already
gotten
h> a reply, but I'm getting a tad confused here to say the least.
Make the CD "Hybrid" with both a Mac and an ISO side. Accessing the Mac
side,
you see the icons (etc.), using the ISO side, you don't (as long as you
don't
define the folder icons at your Atari desktop of course ;-)).

h> I'll probably have to remember to stick to the 8+3 naming convention
for
h> the CD name as well, for full Atari compatibility... just to be on the
h> safe side.
Not really. Even if you go "Hybrid" with long filenames on Mac side, use
the
"Joliet extensions" on the ISO side. Than you have on both sides long
filenames and even if you use the CD on an old ST without a Joliet
compatible
driver, it just will see the 8+3 version, because there is also a 8+3
version

of a long filename on it. I.e. "My first Atari.gif" went to
"MYFIRS~1.GIF",
"My first girlfriend.gif" to "MYFIRS~2.GIF" and so on (and hopefully, you

don't mix up the pics if you want to show someone "the beloved one, who
broke
my heart" >;->).

h> Really? I was sort of hoping for a CD that would last "forever", so I
h> could erase all my program disks and use them for other things instead.
h> I guess, with good care I shouldn't have any problem, and I take good
h> care of all my CDs regardless.
No. To be on the safe side, make a copy of the CD an lock it away. And to
be
on the very safe side, repeat the after a few years. Modern CD last long,
but
a data loss is at least possible.

h> Huh? Two CDs? One's enough for me.
One size fit's all. ;-))

h> (I love Selectric too much to part with it ;-)
This *is* a problem. Maybe you give BoxKite a try? The author just
released
version 2.13.

h> But the problem ofcourse are folder/filenames with spaces in them. It
h> would be nice if MagiCMac could access these anyway somehow.
Problem of applications, not of the OS.

h> But for MagiCMac it would be nice to access files on the Mac side
within
h> folder names with long spaces, or even files with spaces in them.
h> Not a big, important issue really, but it would be nice.
At least, in the ISO side all spaces are removed automatically (using
Joliet
extensions).

h> There shouldn't be any problems if I stick to the usual 8+3 filenames,
h> all uppercase and within the subdirectory depth you've mentioned,
right?
Even if you have lower- or mixedcase, on an ISO part there are all
uppercase
(made by Toast automatically).

h> Or does the inclusion of Mac icons demand a hybrid disk?
Yes.

IME it's the getting connected that is the probel, which then leads to a
chicken and egg situation.

My recommendation is to first point one's modem towards a BBS connected to
NeST. In the past few weeks I posted _fully working_ STinG scripts for Freeserve.

Anibody knoow any site to download the "configur" file
(the first 21 lines) for POWERDOS?.
This old OS is abble to redirect boot process.
I has installet an new 330Mb SCSI disk in my TT (the old 42Mb
crash...-in my country is actualment inexistent hardware support for
Atari-)this one work fine but the new hard disk of my TT is unable to
autoboot.
I think configure for partial boot from floppy an redirect rest of boot
auto folder of C:.
I has download POWERDOS in diferent sites. In any documentation say
"inclose configur file..." but isn't this one.

Well Atari did progress from supplying manual that are as good as toilet
paper; anyone remember the XL/XE manuals!!! After that they supplied
frisbee's as well;) Seriously, there are some software on the Language
disks (Control Panel springs to mind).

The first ST's did have TOS on disk, and Atari hardly ever revised the
manuals. In my STE manual it has a picture of a single sided STFM, and a
card which gives the brief shortcuts etc. that TOS 1.6 (1.06) has.

If you have compatibility problems with TOS versions, it worth trying it
with the disk based TOS 1.09. I use this if any program that don't like
my E's. I only can use it for program that can be run from the Desktop,
I haven't sussed a way to get boot programs to use it.

To upgrade a 520STF to 4Mb you NEED an upgrade board of some kind. You
can either buy one, or make one yourself. There are some DIY
instructions that you can get either from the Quick FAQ or here:

http://www.geocities.com/SiliconValley/Way/8016/atari/sthard.htm

To get online, you seriously will need a HD too. It will functionally
work without one, but what's the point of email or newsgroups without
some way of storing the messages ? And what's the point of surfing the
web when you have to download everything to a floppy ? You'll probably
get disconnected before you've finished downloading a large page.

> Or simply boot from another drive.

I recall hearing about some german utilities to create a patched TOS
image (embeding HS-Modem, WiNX, etc. into TOS), but the instructions
were sketchy at best.

Still, it would be nice to be able to upgrade parts of TOS 3 with a newer
AES (such as AES 3.40 from Falcon) and embed HS-Modem into TOS also.

If you can provide details as to how patching TOS is done and utilities
to help in performing the patch, please tell us.

Joakim, AFAIK yes. Even wide/fast/ultrawide are, tho' the new generations have 68 pin connectors. There are converter-connectors availabe. The only ones to worry about are differential-SCSI. Using the same 50 or 68 pins, but totally different laid out. Convertors for these cost around USD 500,00, so better leave these in the shops. Lately several of these hit the second-hand market, probably coming from mainframe systems with differential SCSI buses, but you can do nothing with these except for damaging your own system.

Thanks everybody !
With termination ENABLED and terminations power ON, Hushi and HDDRIVER
'see' my Atlas (IBM XP31070 Direct Access.
I installed the Hushi driver , saved it , made partitions.
But when I did a complete reset, the Atlas didn't boot, but the TT030
was searching on the A-drive.....
So I'm a little bit further adn I read an interesting message from Martin
Eric Racine.He says it's TOS who are making the bootproblems.
If somebody could made (or have) a patched TOS , the Atlas should boot.
Now I wonder if there's anybody who has knowledge of this patching....
Am very curious, which reactions will follow !!
Jos Vlietstra, email <jovlie@xs4all.nl> - My collection :24 X Atari 1040ST,

>Care to elaborate?

Connecting To news server was very slow and sometimes failed to connect altogether.Engaged tones most the time.One of the reasons I tried Connectfree is that they support x2 and 56kflex modems and Freeserve don't.As my modem has not been flashed to v.90 I need an isp that supported x2 so I can use it on the higher speeds.

I am testing another Free one called UK FANTASTIC.This one also supports x2 and so far so good I have not had any problems with it and with fast access.I might change over to this one if I don't have any problems with it.

Gordy.

English text follows this part.

Cher ami(e)s Ataristes,

Depuis maintenant 2 ans nous travaillons sur un projet
de creer un "Kit de developpement pour Jaguar" pour Falcon Atari.

Celui-ci etant aujourd'hui tres avance, les logiciels sont globalement
operationnels et une nouvelle carte avec des capacites tres avancees
est en cours de finalisation de conception. Nous vous invitons a venir
visiter notre site pour decouvrir un peu plus le-dit projet.

Si notre projet ne vous interesse pas, veuillez nous l'informer afin
que nous vous effacons de notre mailing-list.

Vos reactions nous interressent, contactez nous.

L'equipe Jaguar,
Laurent et Sebastien FAVARD: atari@linux.utc.fr

Dears friends Ataristes,

Since 2 years now, we work to make a "Jaguar Development Kit"
for Atari Falcon.

This one is now very advanced, softwares are ready and a board with
large capabilities is being in final design. We encouraged you to visit
our dedicated Web pages to discover a little more about this project.

If our project doesn't interest you, please contact us to remove your
email from this mailing-list.

Your reactions interrest us, contact us.

3881. Help: Missing files on ST

Newsgroup: comp.sys.atari.st
Date: 1999-03-04 00:00:00 UTC
From: G&#65533;rard Milmeister <gemi@bluewin.ch>
Message-ID: <36DEB436.F2E77A35@bluewin.ch>
Source record: 83295

Hello,

I got an Atari 1040ST, and everything works fine, but a certain
program needs ASSIGN.SYS, which is not on the HD. Unfortunately
I have no System Disks where this and maybe other needed files
can be found.
Can anybody help me with this?
I am a computer collector and an ST newbie.

From: Andy Blakely <andy.blakely@pnl.gov>
Message-ID: <36DEC038.52ACBCDB@pnl.gov>
Source record: 83296

My newest Atari came with MINT, but I don't know exactly what it's for and what it can do (or how to use it for that matter). Isn't it some kind of internet software? Is there a web site that explains what programs do what? I've seen people talk about lots of software in this newsgroup, but don't know what most of them do.

Thanks,
Andy Blakely

> addendum stated to.

My Mighty Sonic Falcon will not work with the resistor mod installed. I thought that mod was reserved for the Afterburner only, but I don't know what was changed on the latest version of Nemesis. I thought they only provided a 50Mhz clock in lue of the 48Mhz. On my stock machine, I don't use the cap or resistor. The resistor provides the DMA clock transmission line with a parallel termination. Most of the clock termination on the Falcon is done by series termination if you notice. You really have to look at the clock on a scope to determine what is best for your machine. Big problem with the Falcon is no one machine functions the same as the other in a lot of instances.

Aside from CENTEK, no one has really made a compatible accelerator that works in all cases. I guess that is because of their philosophy that they only use the Falcon as an I/O device:).

Anyway, I would only use the inductor at the DMA clock for now. At 16mhz, you shouldn't have any DMA (Floppy or SCSI) problems while trouble shooting. Maybe after you get the Nemesis working at speed, then you may have to go back and install a cap.
>

> Do you think I should change something here?

That looks ok. You don't have to remove R217, but you can try soldering the wire to the resistor where the combel clock comes out (would be the top of the resistor looking from the front of the machine.

> Well, Not sure what was on that floppy disk. My Falcons disk drive
> went nuts trying to read it. 8-/
> I tried looking at the disk as soon as the package got here.
> When I saw that the disk was screwed up, I had a gut feeling that
> I would run into problems.
> Good joke ;)

Umm, you sure that the disk was bad? That DMA mod with the resistor in place will cause the floppy to puke now and then. I still think the resistor should be removed until you get the Nemesis working at speed.

>
> >
> >You have BOTH clocks installed in the Nemesis.
>
> I tried it with both and with just one.
> Didn't seem to make any difference.
>

> Is there a way to test the oscillators with a multi-meter

You can look at the output with a multimeter. It doesn't tell you much other
than there is an output of some kind. Usually around ~2.4V.
>
> And can replacements oscillators be found easily?
> I hope they aren't sometype of special designed ones.
> If I try replacing these, Do I need a exact number match?

I have a sh*t load I bought from DigiKey. Nothing special. You have to bend
up pin one before fitting it into the Nemesis. The one that came with the
card should already have this done. As long as there is a clock in the option
socket, everything should be ok for testing. I once tried replacing the 40Mhz
on the Nemesis card, but the card didn't like that:). Leave the 40Mhz in
place. You want the half-can type CMOS and TTL compatible. But you need to
get working at 40Mhz first.....

> There is one area on the Nemesis board that I need to confirm with

> cut this PCB track or not. Its very small and hard to see.

The 24/48 version requires no modification to the Nemesis itself. I find it
strange that you would have to remove something from the new card. That is
something I would get the TUS (the Upgrade Shop) in the UK to answer. They are
the ones with the expertise in that area.

If it wants ASSIGN.SYS it will be using bit-mapped fonts. This means
it will also require GDOS (the OS extension which implements these).

You will need to download GDOS to get anywhere with this. When you do
you will find the package includes a template ASSIGN.SYS and
(hopefully) some bit mapped fonts.

Temporary means GND. not any other point.

I'm not realy sure, it's a long time ago, white wire is the clock
sinal for DMA chip pin 110?

Yep, if the drive doasn't spin up means for me that anything
must be wrong with the clock (from nemesis return to mainboard)
(Best sign: drive doasn't spin up)

White wire is (modified) clock signal for DMA, i doasn't have
the original manual here, but white to GND sounds like a short
circuit.

(Watch the colors, i only have colors from my 1.5 year old release, i
hope titan doasn't chance the colors!)

>Maybe one of the oscillators on the Nemesis board is bad?
>If this is the case, I can probably have one or both replaced
>if they are not a special type and can be found easily.

That's only a idea.

>>Recheck connections to (both) ACIA chips!
>
>I have looked at those very carefully. I followed the manuals
>and used the purple wires to connect the Nemesis board to them.
>It doesn't matter which purple wire you use right?

Another urgend point:

The gray wire must connected to the *right* pin of the removed L102!!

>Does the buffer give any type of improvement by itself?

Hm, hard to tell this in english. The buffer only stabilize
the normal 16Mhz clock for the system. (In very easy words)

>Yes, When I first got the Nemesis package the oscillator was
>loose, not soldered. I tried it with and without solder.

That's normal, same as here. You solder it in the right
direction to the nemesis board?

>Yes, I think the 50mhz oscillator can be removed durning the
>first test. But what about the other one? (I think its
>40mHz) If it is bad, will the Falcon run correctly during
>the first Nemesis test with this oscillator if it is
>removed or connected and damaged?

Yes, normaly you doasn't need the 50Mhz oscillator for the first
check. But it's hard to solder it later to the nemesis board.
40Mhz is used from other system parts.

>Last I heard, the author of apex alpha hasn't finished
>it. Not sure if it ever will get completed.
>Do you have a demo of apex alpha?

Hm..
I don't know anything more about alpha as i sayed last time.
Dave show a demo, years ago on a fair in neuss. That's all.
I doasn't get a demo.

>I was beginning to think I was the only one. ;)

Not yet :) That's called "services" ;/
I'm not sure what they are doing the hole day, but neary
a year for a simple disk update.. i don't know..

>>Ask people i your area to fit the nemesis.. (Idea)
>>(Oscilloscope needed to trace the clock signal!!)
>>
>
>I will probably try to fit it again. If I can't get it
>working. I'll probably try ATY Computers or someone
>else to see if they can get it working.

Hm, other idea. You know that the first manual have bugs?
I'm not sure whitch release do you have, but it sounds you
have the buggy one..

Here you found the complete Nemesis wiring as i done by me self.
(Part of DOITF030)

[Buffer, white cable]
Connect the white wire to Pin 110 of U36, DMA-Chip
Make sure that the old track is devitive cut as describe in the manual

[Buffer, blue cable]
Connect the BLUE wire to the upper Pin of R217

[Buffer, purple cable]
Connect the PURPLE wire to the upper solder pad of R216

[Buffer, orange cable]
Connect the ORANGE wire to the upper solder pad of R221

[Buffer, green cable]
Connect the GREEN wire to the lower solder pad of R222

[Buffer, black cable]
Connect the BLACK wire to the negative pole of the 4700uF capacitor (C147)

[Buffer, red cable]
Connect the RED wire to the positive pole the 4700uF capacitor (C147)

[Nemesis, purple cable]
Connect one of the PURPLE wire to Pin 3 & 4 of U52, IKBD Chip
Connect the second PURPLE wire to Pin 3 & 4 of U24, MIDI Chip
Cut and lift Pin 3 & 4 as describe in the nemesis manual
Do it very carfully.

[Nemesis, brown cable]
Connect the BROWN wire to the lower Pad of R234

[Nemesis, yellow cable]
Connect the YELLOW wire to Pin 74 of the DSP Chip
Cut track 74 as describe in the manual before you build the new connection

[Nemesis, grey cable]
Connect the GREY wire to the right Pin of the removed coil L102

[Nemesis, green cable]
Connect the GREEN wire to the solder pad of U41 (VIDEL U34)
Cut track 73 before as describe in the manual.

[Nemesis, blue cable]
Connect the BLUE wire to the cutten track (Pin 73) of the VIDEL (U34)

OK, hope that helps

Regards, Robert

>
Andy,

lemme jump into this... Atari's have a built-in OS, called TOS. Well, some early models had the OS on a disk, but let's forget about those. The OS sits in ROMS, inside the machine, so you'll never loose it (unless you slam the ROM's with a hammer).
TOS normally is a single-tasking OS. One application at a time, plus some desk accessories. Not enough for some people, so multi-tasking OS-es saw the lite. Some of them commercial, some of them based on MiNT, which in fact is the kernel that needs more items to become fully functional.
I guess you have a kernel. This might be called mint.prg or mintnp.prg, and usually sits in the autofolder. Without anything else related to it, it's pretty useless. It needs a GUI to be able to work with it, like the desktop you get from TOS. The GUI could be anything, like the Atari Multitos AES, or a commercial one (N.AES) or another open-source GUI like XaAES. With those you get a desktop again and are able to run multiple applications at the same time.
Now Mint comes in different flavors: the kernel alone plus a GUI gives you a multitasking environment, which is pretty much TOS compatible. The kernel plus a special partition with lotsa files gives you a Unix environment, including networking/internet facilities. You can add a GUI to get TOS compatibility at the same time.
With the kernel itself (mint.prg) you can do very little. It needs additional files. Look for a directory "multitos" on your disk. If it's there (with additional files in it), you may have a working Mint environment already. Also look at the boot procedure, there should be a message "Mint version somuch booting".
If you only have a Mint.prg in the autofolder and nothing else, it's just a waste of time/memory. Mint.prg is no Internet stuff, but together with additional S/W you can have Internet access. For a beginner it's rather complicated, but OTOH it offers features for free, since Mint is an open source project and at the same time offers TOS compatibility. Perhaps it's a good idea to mention what type your "newest Atari" is, how much memory it has etc. If you have only 1 meg of memory, I'd say forget about Mint and run the regular TOS. De-activate Mint by renaming the .PRG file into .PRX or something. Get familiar with the Atari and it's S/W and you can always get back to Mint if it sounds interesting.

>I am a computer collector and an ST newbie.
>
>--
Gruess Gott Gerard,

assign.sys is a systemfile needed by certain programs to work OK. The
Atari came with a so-called systemfont, which is displayed on your screen.
(Maybe you don't know what a font is: a certain type of character).
You can change the type by running additional S/W, together with related
systemfiles. A lot of other software can make use of this to display
different fonts on screen/on the printer etc.
Basically, you need a GDOS program. Variants are called AMCGDOS.PRG,
GPLUS.PRG and one commercial variant is NVDI.PRG. These run from the
autofolder. They need a folder called "GEMSYS", where you put all
different kinds of fonts in. The other thing then you need is an
"ASSIGN.SYS", which is an ASCII-file telling the GDOS program where to
look for this "Gemsys" thing and what fonts there should be loaded. A bit
complex to set up for a beginner, unless you know what you're talking
about.
On the next boot GDOS or whatever variant is loaded, the Assign.sys is
read and the specific fonts are loaded. Then you can configure other
software to make use of this/these fonts.
Note that GDOS plus the additional fonts take memory, so with a 1040ST
with only one meg of memory you need to keep an eye on memory use.
Now first you better check whether or not your "autofolder" contains one
"GDOS.PRG", "GPLUS.PRG", "AMCGDOS.PRG" or "NVDI.PRG". If it does, you may
come back here, if it doesn't it's pretty useless to create an
"ASSIGN.SYS".
Note that NVDI is commercial, you gotta buy it. It not only enables you to
use different fonts, it speeds up your OS as well. If you ever use it for
one week, then loose the program, you'll be cursing for another week :-)
Just to be complete, ASSIGN.SYS is a file that normally sits on the root
of your boot disk, so either the floppydisk you're booting from or the
harddiskpartition you're booting from (usually C:\).

In case you need to know more, give me/us a yell (Yoodelateehee or
something)

Being newbie, you may not need all the GDOS stuff yet.
If there is a NVDI.PRG in the folder AUTO on partition C:\
Rename this to NVDI.PRX and see.
NVDI speeds up the standard screen output as a minimum.

Greetings.
Henk.

Source record: 83314

Hello Jin,

j> PII 366 soon for my course, I'd love to be able to run all my old
software
j> again,, especially GFA Basic 3.
GfA Basic is a problem.

Buy MagiC PC if you want a "GfA compatible" emulator as fast as a rocket
within Windows and its advantages. In addition: Using a TOS image and
"Hard
Disk containers" (Windows files which work as fully Atari compatible Hard

Disks), you get the IMHO most compatible emulator at the moment.

Or buy TOSBOX (works only with a TOS image). Much slower (but especially
on
your designated hardware still *much* faster than a TT ;-)), and "just" a
DOS
software with some restrictions (color depth, no long filenames, ...).

Greetings, Oliver

>I wonder if one version fixes the clock, while the
>other doesn't?

Hi Phantom,

I have the 24/48 Nemesis. My Falcon's clock ran slow before AND after the Nemesis install, so it made NO difference. I recall another Falcon owner with the same problem who said that it fixed itself and ran fine since then, but he had NO idea why... :-/ I was told that the battery and clock were in one module. I had the module replaced at the same time Nemesis was installed, but it made no difference. Aaarghh!! I'd sure like to find out why it runs slow, and if it can be fixed.

Good luck,

Hello,
Well I think the time has come to maybe close the operating system poll , as
it gets very little activity lately.
So far, 598 people have voted, which shows us that ATLEAST there are THAT
many atari users left connected to the web :)
Ok here are the latest results:

What Atari/TOS Operating System do you use?

MagiC (209) 35%

Single TOS (69) 12%

MiNT (Geneva/MiNT, N.AES, MultiTOS etc) (213) 36% <!!!>

Magic MAC (32) 5%

Geneva (24)

MagiC PC (27) 5%

STonX, WinSTon, GEMulator, PacifiST, etc (19) 3%

LINUX/M68K (5) 1%

3904. 2600 & 8-bit Emulation for Falcon?

Newsgroup: comp.sys.atari.st
Date: 1999-03-04 00:00:00 UTC
From: Nurmix@NO_SPAM_MEsocal.com
Message-ID: <7bn5hd$2gva@enews2.newsguy.com>
Source record: 83318

Anyone know if there is (or ever was) an Atari VCS 2600 emulator for the Falcon? I've seen the Falcon NES emulator so I would think it _could be_ done. And if there is one, does it use the same ROM/binaries as the PC 2600 emualtors do?

And what about an Atari 8-bit computer emulator for the Falcon? I seem to remember someone posting about one called 800OBJ or something, but could never find it. Anyone have any info?

Thanks!

On wednesday 03 March '99 Jo wrote:

>AFAIK there's no such thing as a "100% Atari" CD-format.
No, of course there isn't.
CD RECORDER PRO can burn a CD which doesn't follow the rules, they call that option "atari". What you get is a CD which is a exact copy of the files on the harddisk. You don't have to bother about illegal characters, folder with a extender etc....

> Why not just stick the HFS-CD in the ST's CD-ROM and read it directly?
>Spin! does this without any problems at all.
Yes, but Hall wrote he would like to use it on ALL atari's. SPIN can only show long file names when running under a multitasking OS which supports vfat. Under TOS all long file names are truncated, and that's not what Hall wants I suppose.

Cheers from Belgium

Dennis

PS:Jo, Have you noticed how I answered the multitasking bit? carefully avoiding to start another OS war, I'm finally learning -)))

On wednesday 03 march '99 Hall wrote;

>those commercially available CDs for our beloved computer
>-which format are they in?
Nine times out of ten in ISO9660 format, they avoid all the hassle by
ZIPPING the "difficult" files.

>Don't tell me there's an "Atari CD format" around as well?
According to SoundPool there is. For burning a CD straight from a atari,
its a very time and nerve consuming option.

>I don't know anyone with an ST who has a CD-writer.
>If I did, I wouldn't have raised the question here, on how to burn a CD
>on a Mac ;-)
If you decide to burn the CD, in whatever format, send it to me and I'll
make sure you get a 100% readable CD on all atari's back....

>You mean, I can make a standard Macintosh CD and with "Spin" I can read
>installed on any ST I'll have no problem reading it?
Yes, but...
Yes, with SPIN installed you'll be able to read it on ANY ST running
whatever OS....
But long file names will only be shown under MagiC or MINT, this of
course has nothing to do with SPIN or the CD, but with the vfat option.

So, If you want a fully readable CD on ALL atari's avoid long file names,
that is the only limitation....

>What a hassle! I never knew making a CD would be as complicated as this,
It isn't really, normally it is just a matter of dragging some folders
and files into a window.... but in this case it's a bit complicated not
because of limitations on the Apple, but because of the limitations Toast
has. AFAIK there is no "decent" CD Writer program on the Apple platform.
The other way around would have been easier, we can burn a perfect HFS CD
on the atari.

CD Recorder Pro, is a very good program compared to what's available on
other platforms. It even allows "overburning", the latest gadget on the
PC platform....
Once again Atari leads the way...))

Cheers from Belgium

Dennis

>IDE doasn't spin up without nemesis returned the clock to the mainboard.
>Same as with your display.
>

The Nemesis manual says to solder the White and thin Black wire to a
temporary ground to force the Nemesis card to be turned Off during the
first test. When I do this, the IDE drive will not spin up. If I leave
the thin Black wire connected to ground and remove the White wire
from Ground and leave it not connected to anything. The Falcon will
boot and the IDE drive will spin up.
Does removing the White wire from ground as above turn the Nemesis
on?

Maybe one of the oscillators on the Nemesis board is bad?
If this is the case, I can probably have one or both replaced
if they are not a special type and can be found easily.
>
>Recheck connections to (both) ACIA chips!

I have looked at those very carefully. I followed the manuals
and used the purple wires to connect the Nemesis board to them.
It doesn't matter which purple wire you use right?

>
>Listen the video modification.

Not sure what you mean by the above?

Does the buffer give any type of improvement by itself?

>
>Some wrong connections or devective nemesis board.
>(Sure you insert the clock oscillator well?)

Yes, When I first got the Nemesis package the oscillator was
loose, not soldered. I tried it with and without solder.

>(But that have nothing to do with an offline nemesis, falcon must
>work as a orignal falcon if nemesis is installed an off)

Yes, I think the 50mhz oscillator can be removed durning the
first test. But what about the other one? (I think its
40mHz) If it is bad, will the Falcon run correctly during
the first Nemesis test with this oscillator if it is
removed or connected and damaged?

>

>wires should attacht).

Yes, I was very careful with the wires and soldering connections. I
used a multi-meter to check all the wire connections.
I used those 2 E markings on the Nemesis board for my grounds on
the first attempt. Then added more, at least 6 different ground
connections on one attempt.
>

>Check the floppy file aginst the manual a few times.

The manuals are a bit confusing.. But I did correctly connect all
wires as the manual and the updated text file said to.
Unless some of the color wires where switched on my Nemesis board,
they where connected correctly.
>

>leg to ground? You tried it without the capacitor? Should work with it.

My Nemesis is a 25/50MHz. Now when I did the DMA Buffer modification.
I followed the instructions on the small one paged Nemesis addendum.
Which says to use a 100 ohm resistor (which was included in the
package) instead of the 150pf capacitor. And a inductor. According
to the addendum the best inductor to use is the one from L102, which
has to be removed anyway for the Nemesis board wire connections.

I cut the track on Pin 110 and connected the white wire from the
Buffer board to one end of the inductor then connected this
connection to the track nearest to Pin 110 of U36.

The other end of the inductor is then connected to one end of the
resistor, then the other end of the resistor is connected to the leg
of pin 14 of U20. Just as the addendum says to do this. I checked this
several times.
The above is the only method I tried, AFAIK it is the correct way to
do it for the 25/50MHz version of the Nemesis.
There was no capacitor supplied in my package. The 100 ohm resistor
was supplied instead.
Also the 33pf capacitor on the Buffer board was removed as the Nemesis
addendum stated to.

I am not sure if doing the buffer mod the way the original manual for
the 24/48MHz Nemesis says to would help or make things worse?
Anyone know about this?

>
>You are not using a RAM Gizzmo at speed higher than 20Mhz. You are not using

>problem, but others haven't had as good as luck).
>
>Get a Wizztronics Falcon RAM card if you don't already have one.

I tried two different Ram cards. A Ram Gizzmo and a RAM Karte which
is similar to the Wizztronics one. It uses a single 72 pin Simm.
It made no difference.
>
>You utilized all the "problem" alternate methods of attaching the clock
>wires, ie, removing the resistor on the COMBEL clock-in and attaching the
>input to the top of the pad. The buffer gets its clock from the top of the
>resistor where the clock exits the COMBEL.

The Buffer board is located just like the Nemesis manual states.
The 3 surface mounted resistors were removed. All wires are as
short as possible. I did not remove resistor R217. All wires
are connected as the manual says to on page 11 of the manual.
In the Combel U56 area, all wires from the buffer are connected
to the top pads except for R222, here the smallest wire (Green)
is connected to the lower pad.
The Falcon booted fine on the first try after doing the buffer
modification. I tried playing sound files and recording samples.
And had no problems. So I have not made any other changes to
the buffer. It has been in the Falcon for over 3 months and
I experience no problems.
Do you think I should change something here?

>
>Remove your FPU for now (if you have one).

Don't have a FPU yet.
>
>Modify the serial chips just as the readme file explains on the floppy. No
>more, no less. Go over the manual and readme file a few times, remembering

>your reading something that was wrote by people that drink tea at lunch and
>not coffee:) (just a joke:).

Well, Not sure what was on that floppy disk. My Falcons disk drive
went nuts trying to read it. 8-/
I tried looking at the disk as soon as the package got here.
When I saw that the disk was screwed up, I had a gut feeling that
I would run into problems.
Good joke ;)

>
>You have BOTH clocks installed in the Nemesis.

I tried it with both and with just one.
Didn't seem to make any difference.

Is there a way to test the oscillators with a multi-meter
or something to make sure they are good?

And can replacements oscillators be found easily?
I hope they aren't sometype of special designed ones.
Both look the same, metal type casing. One is
labeled
AEL
1200CSN
50.000
7709
This is the 50MHz one I assume and was fitted loose.
At my last attempt I did apply a little solder to the pins on it
to make sure I got a good connection with it.
The other one is labeled...
AEL
1210CSN
40.000
10/96

If I try replacing these, Do I need a exact number match?

>
>My Falcon is lazy too (as some internet sticklers have pointed out in my
>postings:). It has made no difference on three of my accelerated machines.
>>
>

>Mike
>
>(email me, not at this address, and we can go over connections)
>
I am planning on another attempt to install it soon. I'd like to
get some replacement oscillators if possible first. And try them
if I can't get it going. I'll try to get a e-mail out to you
soon.

There is one area on the Nemesis board that I need to confirm with someone. On the 25/50MHz version, The 2 capacitors near the thin black and white wires on the Nemesis board have to be removed according to the Nemesis addendum.

With the first capacitor removed at the corner right beside of a small IC, you can see a small PCB track coming from Pin 1 of this IC which then connects to one of the legs of the removed capacitor. Then this small PCB track seems to continue on to connect up with the thin black wire.

Now what I need to know for sure is, On the 25/50MHz Nemesis version, should this PCB track from Pin 1 connect with the thin black wire? Or should it be cut?
I am not for sure if removing the capacitor also suppose to cut this PCB track or not. Its very small and hard to see.

Any help is again appreciated,
phantomm@kih.net

No problem, I don't think I have any real problems with the
NVRAM. The Nemesis has been trouble. If I can't get it
working, I'll probably smash it with a hammer and try to
buy a CT2 or something.. :)
I dont think you can use a nemesis with a CT2 anyway.

I am interested in the new boards that Titan is suppose
to be working on. But not sure they would sell them to
me if they ever do make them.

I don't have the lack of Apex 2.41 problem any more.
No, the disks still haven't arrived. But no matter :)
And its not a pirate version.
Thats all I can say about that. ;)

>
>:-)

Hmmm...Well this strange Falcon clock mystery grows stranger.
Some say the Nemesis didn't effect their clock. Your Nemesis seems
to have fixed it.
Do you have the 25/50MHz version?

And the rest of you Falcon owners out there with a Nemesis that
either fixed your clock or made no difference and it is still
abit slow. Do you have the 24/48MHz or the 25/50MHz version?

I wonder if one version fixes the clock, while the
other doesn't?

I bought my Falcon used about 3 years ago, the clock has always
been a bit slow. Probably came from the Factory that way.
I'd sure like to know a sure fire fix or what exactly the
problem is. Not that it appears to be a major problem.

Also, does anyone know if any other part of the Falcon uses the
same clock that keeps the date and time for other things?
Like Memory perhaps? hmmm...

TOS definitely can't boot from drives that require initiator
identification like the Quantum Fireball. If there are other drives on
the market that also require initiator identification TOS will also not
boot from them except after having been patched. It's as simple as that.

anodyne@cyberus.ca wrote:

> Many (most?) modern drives require SCSI arbitration.

No, only very few drives require this feature, especially the Quantum
Fireball. And it's not arbitration that's required but initiator
identification. Modern drivers provide both at the same time. The
LINK96/07 host adapter offer initiator identification by hardware since
by software this can only be done for TT and Falcon, not for ST/STE.
This is why the LINK96/97 is the only host adapter that works with
Quantum Fireball drives.

What for ? For general information, this newsgroup is pretty good.
Mailing lists are usually for more specific subjects that don't really
justify the need for a real newsgroup. There is a MiNT mailing list, a
Notator mailing list, things like that.

3919. Re: MAME - Is an Atari version planned?

Newsgroup: comp.sys.atari.st
Date: 1999-03-04 00:00:00 UTC
From: Tim <backbone@swbell.net>
Message-ID: <36DE5047.61E43D6C@swbell.net>
Source record: 83380

The source code is freely available and is (for the most part) very portable. That is the main reason why that there are so many diffrent versions of it. I assume.. that someone just hasn't taken the time to port it to the ST.
The answer that it probably wasn't is also the same reason that its easy to port to other platforms. Most of the code was written in C. While its easier for the developer to port, its much slower than Assembly. There are portions that are optimized in ASM but most of it is C.

Even that requires a pretty fast CPU to translate the code so the game is even playable. Most 8-bit games from the early 80s might run but, forget about those that came after 1985. An Amiga requires at least an 040 with an FPU to get anything to run at a decent speed and that is the limit unless the code was optimized for PPC.

If you compare Amiga to Mac, for example. A 68k Mac just can't handle the load where even a 60Mhz PPC can do quite well. There are other emulators besides MAME that are faster but, they are usually written in ASM or a large chunk of it was anyway.

Has anyone out there has used any of the Atari emulators that are available on the PC right now? I have been a long time Atari owner (back to my 800XL), and unfortunately my STFM gave up the ghost some time ago, but I still have the machine and software on floppy - and as I'll be getting a PII 366 soon for my course, I'd love to be able to run all my old software again,, especially GFA Basic 3.

Cheers for any help/advice you can give in advance!

It's always funny until someone gets hurt,
and then it's just hilarious.

(EN) (FR)

Greetings everyone!

I have found a manufacturer willing to produce us a batch of VME Ethernet cards that use the Lance technology (same as Riebl and Pamsnet) which they used to manufacture, but discontinued a while back.

However, they need a quantity purchase, before they can offer them at an affodable price. If I can collect about 100 purchase orders, then they should be available for _very_ cheap.

Since we already have Lance drivers for MiNTnet and STinG, it would be easily implemented on a MEGA-STE and TT.... but we first have to gather enough orders, before they can justify another production run.

Please forward this message to MausNet and any other Atari newsgroups where it would be suitable.

Once I have collected enough purchase commitments, I'll post another message here to let people know what prices I've been quoted and how I expect to distribute the cards.

***

Bonjour ï¿½ tous!

J'ai trouvï¿½ une compagnie qui accepterait de produire une autre sï¿½rie de cartes Ethernet VME basï¿½e sur la technologie Lance (la mï¿½me que sur les Riebl et les Pamsnet). C'est un modï¿½le qu'ils ont cessï¿½ de produire il y a quelques annï¿½es.

Essentiellement, ils sont disposï¿½s ï¿½ produire ï¿½ nouveau, mais seulement si je rï¿½ussis ï¿½ amasser suffisament de promesses d'achats pour justifier une nouvelle production et un prix de grossiste.

Nous avons dï¿½jï¿½ des drivers Lance sur MiNTnet et STinG, ce qui permet l'utilisation sur MEGA-STE ou TT avec un minimum d'ajustements.. mais nous devons d'abord constituer une commande suffisament allï¿½chante, si nous voulons convaincre le manufacturier de produire ï¿½ nouveau.

Veuillez faire parevenir copie de ce message sur MausNet ou tout autre newsgroup Atari suceptible de trouver preneur.

Lorsque j'aurai amassï¿½ suffisament de commandes et aurai obtenu une estimation plus prï¿½cise du prix de revient, je vous en informerai ici.

It is a known problem that using the Magtorom program with MagiC 6, while
using proportional fonts, causes this problem. If you are using this
program, simply disable it and see how everything goes. (This is in the
tips/trucks section of MagiC Online)

3927. MagiC Milan slated to be released by end March

Newsgroup: comp.sys.atari.st
Date: 1999-03-04 00:00:00 UTC
From: Bengy Collins <collins@bulli.com>
Message-ID: <5SvD2.3707$Qs5.2921@news0.telusplanet.net>
Source record: 83388

Just in case anyone doesnt know yet, the ASH newsletter came out not too long ago, which announced quite a few new programs. One of them of course was MagiC Milan 6.1 which they hope to be out by the end of March, with possibly an special upgrade price for users with a previous version..
(In other news, MagiC PC 6.1 is now 2-3 times faster then previous, Atari/Mac MagiC now are up to 6.1 to and support FAT32 and Pfork (). Jinnee is up to version to, texel/artworx has been updated, new printer drivers for NVDI 5.02, new ASH Emailer , new Papyrus etc etc :-)
To read the full letter go to ash's site (ash.sww.net)

CoMa can this since beta-version 4.8.5.(only in our Mailbox)
The official version 4.9.0 will be released soon.

But he wanted to make the CD on a Mac! Btw. burning a FS-image on CD is
exactly what you do when making HFS-CDs.

> > Why not just stick the HFS-CD in the ST's CD-ROM and read it directly?
> >Spin! does this without any problems at all.
> Yes, but Hall wrote he would like to use it on ALL atari's. SPIN can only

> vfat. Under TOS all long file names are truncated, and that's not what

It's correct that Spin! needs MiNT or MagiC, but it has absolutely nothing to
do with VFAT. Under TOS it won't even work IIRC, so you need a separate DOS-
driver. AFAIK none of these supports anything else than 9660.

> >installed on any ST I'll have no problem reading it?
> Yes, but...
> Yes, with SPIN installed you'll be able to read it on ANY ST running
> whatever OS....

Nope. Spin! is a XFS for either MiNT and MagiC (but depends on MetaDOS with a proper BOS-driver), so it will not work without one of these. Under SingleTOS you'll need a OS-independent DOS-driver for MetaDOS, none of these supports anything else than 9660 (atleast I haven't found any).

> But long file names will only be shown under MagiC or MINT, this of
> course has nothing to do with SPIN or the CD, but with the vfat option.

This is as wrong as it's possible to get it ;-) As I said in another post Spin! is a complete self-contained filesystem and doesn't depend on VFAT or anything else. It needs MetaDOS for accessing the CD-ROM itself, but that's all.

> So, If you want a fully readable CD on ALL atari's avoid long file names,
> that is the only limitation....

The most compatible format is ofcourse ISO9660, since all CD-ROM drivers understand this. But you'll loose all long filenames, Mac resource-forks etc. so it's not exactly ideal...

I know that Hallvard use MagiC on his STE, and since he wants his CDs to be readable on his Mac as well I suggest he use HFS on his CDs.

> and files into a window.... but in this case it's a bit complicated not
> because of limitations on the Apple, but because of the limitations Toast

I would say that the Mac's inability to read anything else than 9660 and HFS is a serious limitation...

> CD Recorder Pro, is a very good program compared to what's available on
> other platforms. It even allows "overburning", the latest gadget on the
> PC platform....
> Once again Atari leads the way...))

But does it support my excellent HP 8100, and can it be used for... ehh... "backing up" Playstation CDs? Nope, so I had to buy a PC...

Hi!

Bengy Collins <collins@bulli.com> wrote:

> It is a known problem that using the Magtorom program with MagiC 6, while
> using proportional fonts, causes this problem.

Note, though, that it's not the fault of MAGTOROM, but of MagiC itself,
which for some reason overwrites its own memory in this case. That
means, it works without MAGTOROM, but you never know what part of the
MagiC kernel gets overwritten by this bug, so a crash is still likely to
occur. The safest solution therefore is to simply not use a proportional
system font.

Ciao

Thomas

Hi

I must echo what Mr Bales has said; knowing what part of the world you
are from does help a lot and enables people in your area to help.

Most Amiga 3rd party mice have a switch to enabled it to be used on the
ST. I have come across a couple that had a 3 way switch (ameaba, ST &
pc).

Hello Dennis,

dv> Why make it complicated if it can be done simple?
My conclusion:

- check the Atari filenames on illegal characters and folder depth (as long
as you have Atari files, the filenames should already are 8+3), keeping in

mind, that "DOS characters" (i.e. "!" or "#") and extension to folders are

not allowed on ISO 9660 Level 1, but on advanced levels which are read by

every "actual" system.
- for better explanation use long names for folders as you like, keeping in
mind, that the name will be shorten on systems without having that ability

("Hot Freeware.Collection" -> "HOTFRE~1.COL") and icons with your Mac.
- give the Mac HD (or Syquest, ZIPs, ...) to a friend with Toast on a Mac and
let him burn a Hybrid CD with Mac HFS on one side (having long filenames and
wanted icons) and ISO 9660 with Joliet extensions on the other (having long
and short filenames).

That's the way I do it, getting the best on all (possible) platforms. Now and
in the future ... :-))

PS: OK, it would be really the best, if I would add Rockridge Extensions for
long filenames on UNIX, but I have no tool for that. :-(

Greetings, Oliver

We are Microsoft - Resistance is futile!

I have tried a lot but never been able to get the Atari Network
software running with a Riebl.

Now I am trying to do it with MiNT98.
No results as yet (see my thread "One of these days...").

But when I have really realtime running roaming roaring MiNTNET I can
get interested in a third Reibl card (I have 2 now plus 3x Bionet)

I've not been able to tell from the docs/help guide with QED
v4.52e, how to make it save in straight ASCII (CR not LF). I
use it with Amail as my text editor of choice, but Amail
saves with LF and when I edit my saved messages with QED it
saves them that way also. Thanks!

Yep, there is a version out for the Hades but like Paul said it isn't that
stable. Furthermore according to a German saleman it is much slower then
for instance N.AES and it also has some difficulties to go online.
>
>However, don't let that put you off getting a Hades, it is a very quick

The ATI Rage 8 MB will cost around 450,-DM (230.10 Euro).
The Hades is very quick indeed but with N.AES/MiNT it's faster and you'll
have a very modern machine.

Why not? MiNT itself is really a piece of cake. It's only the MiNtnet part
that isn't that easy.
Remember you can use STinG (or Draconis or even PPP-connect) with MiNT. I
know a while ago someone said that MiNT/STing wasn't stable on his machine
but I can tell you for sure on my Hades it's rock solid.

Ronald, IMO not very surprising.

Situation I: no net access, perhaps a mag reader: ASH advertising perhaps directly, otherwise dealers trying to sell MagiC. Whoever heard of Mint? One or a few loners, reading between the lines and trying to get the necessary files together. Mint and the whole bunch available on BBS systems? Tell me where...

Situation II: net access, in whatever form. Reading about it, there's plenty of groups where it's being mentioned. Discussions about development. Websites devoted to Mint alone.
People know it's for free (well, some work installing it).
No wonder that just checking people with net access, Mint comes alongside MagiC, especially lately where a lot of development has been done.
Should really be more installation-friendly, and then it wouldn't surprise me if it beats MagiC by far...

Oliver Schildman <Oliver_Schildman@LU.maus.de> wrote

>Can I burn a Mac/ISO Hybrid CD on an Atari without having a Mac at
>all?
Don't be suprised, YES you can.....-)))
As a matter of fact I've done it several times for a friend who is on
the Mac Platform.

>With other systems, I need to create a Mac image on a Mac, transfer
>it to my CD recorder and create a CD
Not with CD Recorder Pro you don't
All you need to do is bring a harddisk, syquest, jazz or whatever and
connect it to the SCSI bus on the Atari. CD Recorder has a option
called SCSI Copy. This allows me to make a copy of your harddisk or
partition just the way it IS. You don't have to prepare anything at
all if you don't want to. So even though that Atari can't make sense
of the HFS formatted harddisk, you'll still have a perfect working CD
which will contain a exact copy of your harddisk/partition.
This option is also perfect to create a CD for the AKAI or Kurzweil
samplers, which don't have a directory and do not use a ISO standard
at all. If only the musicians among us would know about this option
which AFAIK is not implemented on any other platform, they would
"flock" back to Atari.

The trouble is that a lot of the Atari software has features no one
knows about. I know people who bought a PC to do things which could be
done perfectly on the Atari. They just didn't know it existed or that
a certain piece of software had certain features implemented....

>The "spirit" is to do the work with less time wasted as possible,
>using most of the features available. What's wrong with it? ;-)
Yes, that's what I said, and I've just given you a exemple of it....

Cheers from Belgium

Now, now.. speaking of being decent... look at it this way, Milan is trying to keep a computer platform going, and the biggest strike I saw that they had against them was the ability to not run Magic, thus cutting off half the Atari population. If Milan will now run Magic, all are served, and the Atari platform is assured.

Magic.. Mint... personally when I get into the higher machines (when I can afford it) I'll probably go with Mint, simply because it is cheaper and I have seen it has a lot to offer as a community based operating system. (Much like the Linex vs. Windows concept).

However, Magic does some pretty cool things too. Personally, I think it's cool the Milan can cator to both crowds.

(Yes, someone has made a Atari 8-bit BBS telnetable! I realize
this may not be anything special in the ST world... but for Atari8 users
this is a great triumph!
Especially since I miss visiting my Atari 8-bit BBS'ing days of
1985-1989. With any hope, with the release of the "Pro Gold" version of
Express, it will spawn a new commnity of telnetable Atari 8 BBS'es.)

How did the commercials go... "Great for Atari..." ;)

CHAT ONLINE *LIVE* WITH ALAN CAMPBELL: YEAR 2000 CONSULTANT

Saturday, March 6th 8:00 pm (Central Standard Time... USA)

We invite Alan Campbell to join us to discuss the Year 2000 and how it will really impact us.

His knowledge of this topic sterms from long term preparation efforts and has been working with top level individuals at U.S. forms about what they can do about it. It will be a very good, informative night.

Find out what is going to happen. Find out what you, the computing user, cannot do without. Find out what the real risks are.

You can ask questions and get answers direct from Alan Saturday Night at 8:00 PM Central Time.

Do you know what your bank will do? Your investments? Your 401K? Your sewage line?

Do you know which dates OTHER than Dec 31, 1999 are endangered? Are you sure?

We won't miss it! Please be there with us online.

HOW DO YOU GET THERE?

Browse to www.AtariUsers.com and enter the main chat room.

You are then able to choose frames or no-frames. This site has been made as CAB friendly as possible. Atari CAB users should use the no-frames link that appears.

This site has also been tested with the common PC browsers and Macintosh Netscape 3.0. While this is a service to the Atari community, others are welcome.

Log in and say hi to whoever is online at the time. Remember that the only scheduled chats are currently Sat. 8:00 pm CST.

This is a big event with a Y2K consulatant is is used to speaking to large gatherings of people. Make it a point to show Alan Campbell a harty Atari welcome!

Maybe you could slap a nice bright "Powered by ATARI" sticker on
the microsuck door someday! Better yet, cover up the 'Men' sign
on the restroom door with a 'Bill Gates office' sign!

Hello Dennis,

dv> All you need to do is bring a harddisk, syquest, jazz or whatever and
dv> connect it to the SCSI bus on the Atari. CD Recorder has a option
dv> called SCSI Copy.
Oh come on! That is just the same thing!

You have to have a Mac to create and fill that HFS formatted medium!! And
if
you want to change something, you have to go back to that Mac ... :-((

dv> Yes, that's what I said, and I've just given you a exemple of it....
Sorry, not at all.

Gruß, Oliver

Yes , with HDDRIVER you cannot use a Quantum Atlas as booting drive.I think it's impossible for Uwe to get this indenfication thing built in his software.But he says this so simple about a patched TOS ??? Does something like that exists ???If you did not know the latest info about my experiences, I can tell you that the Atlas finally is 'seen' by the TT030, that was a matter of termination.When you are working with HDDRIVER you can install a hddriver.sys, you can partion the disk, but.....when you reset , the TT won't find it again, that's the problem .Now I've hooked a Seagate ST3610N (500MB) on the TT and this works without any problem.I tried to link the Atlas on the ACSI port with ICD 'the Link' and an external powersupply.It didn't work either, I think because this ICD Link adapter is too old ??? Again, the Seagate worked always fine with this ICD Link.Then I tried to link the Atlas directly with a SCSI cable from the SCSI port of the TT.No result either, I even suspect the malfunction of the Atlas connections affects the working of my Seagate, because I saw suddenly that the names of many folders and programs were wrong : GEMVIEW was GWWVIEW etc.So I had to copy all the files from my 80MB IBM again.I fear that when the connection on the ACSI and SCSI port is wrong, it affects the internal drive (Seagate) OR IS THIS NONSENSE ?????????????

I'm sorry. I forgot you are on MagicMac, that's probably the reason it doesn't work.

I know this thread is becoming more and more confusing for you, from a simple project it has evolved in a discussion about different OS, CD Drivers, BOS and DOS drivers, different ISO formats etc......if it goes on much longer we'll be probably discussing, the best suited media to burn the CD on. -))

I can only speak for myself here: a CD burned in HFS can be read on any Atari when SPIN is installed. Avoid long file names if you want the CD to be read on a Atari which runs in Single TOS, otherwise they wil be truncated.

On a Atari with CD recorder Pro, a HFS CD can be very easily transformed into a "atari format" CD wich can be read on any Atari no matter what CD Driver is installed....

This info isn't theoretical knowledge, but practical. I've been burning CDs on the Atari for nearly three years now, so I gues I know what I'm talking about.

I wander, am I the only one here who uses a Atari to burn CDs ? All the reactions so far have been from people using PC's or Macs.... where's the spirit?

Cheers from Belgium

Dennis

>
>But does it support my excellent HP 8100, and can it be used for... ehh...
>"backing up" Playstation CDs? Nope, so I had to buy a PC...

I don't doubt that your HP 8100 (which AFAIK is a SONY) is excellent, but
"backing up" certain CD's has nothing to with the hardware. I can make
"backups" from Playstation CD's since August 1997, these "backups" are perfect
and I don't need a PC to do this...my humble TT does it without complaining.

Questions for You..(these depend on the hardware..)
How do you make a "backup" from a 720Mb CD on the combination PC & HP 8100 ?
How do you copy a audio CD containing 82 minutes of data ?

All the above, just to name a few can be handled on a TT with CD recorder Pro
on a TEAC 55S also a excellent machine.
Oh yes, audio grabbing takes place at 8x, without faults, something which a
HP8100 can't even accomplish in a modest 4x
Enjoy your PC.....

Like I said: once again Atari leads the way.......

Cheers from Belgium

Dennis

If VFAT is not enabled, you will not see long file names under MagiC, let
alone copy them correctly, I can't speak for MiNT as I don't use it
Under TOS you NEVER can see long file names no matter what DOS or BOS driver
one uses.

>I know that Hallvard use MagiC on his STE, and since he wants his CDs to be
>readable on his Mac as well I suggest he use HFS on his CDs.
That's what I said, I suggest you read my posting again. Burn the CD in HFS on
a Mac, avoiding if possible long file names. Then turning the CD on a Atari,
into a CD which any Atari can read under whatever CD Driver it is running...

This task can be easily accomplished on a atari, if a PC can't do it, well to
bad

>The most compatible format is ofcourse ISO9660, since all CD-ROM drivers
>understand this. But you'll loose all long filenames
You keep repeating what I wrote.....

>I would say that the Mac's inability to read anything else than 9660 and HFS
>is a serious limitation...
What formats can your PC handle? If you like I'll send you a couple of atari
CDs which your machine will NOT be able to handle, that's a serious limitation
also if you ask me

>Under TOS it won't even work IIRC, so you need a separate DOS-
>driver. AFAIK none of these supports anything else than 9660.
No, You don't remember correctly. I suggest you take a good look at the SPIN
docs, they were written to serve a purpose. SPIN does run on Single TOS.
While on the subject, I use the HS_ISO.DOS driver, which is perfect.

>Nope. Spin! is a XFS for either MiNT and MagiC (but depends on MetaDOS with a
>proper BOS-driver), so it will not work without one of these.
SPIN comes with his own BOS driver: SPIN_SD.BOS, under MagiC it doesn't need
MetaDOS but is perfectly happy with the supplied METAXBS.PRG.
MetaDos is needed when you run SPIN on single TOS, which according to you is
not possible and the SPIN_SD.BOS has to be activated in whatever OS you run.

Conclusion:
Burn the CD in HFS, under SPIN the CD can be read on ANY Atari, under MagiC
and MiNT long file names are visible. To make the CD 100% compatible avoid
long file names. And that is all there is to it...all the rest is bull****
and has nothing to do with Hallvard wanting to burn a CD on a Mac which can

be read on a Atari.

Why make it complicated if it can be done simple?

Cheers from Belgium

Assign is part of the GDOS font program files I believe.
You must have a prg that uses GDOS to really need this.
It was Atari's early attempt to make scaleable fonts.
Was better replaced by Codeheads program which
was faster and less crash prone from what I recall.

I post this JUST in case anyone knows...

Does the latest (or any?) Atari version of MagiC work on Hades060?

I would give my grandmother away to own one of these (POV-ray 3
would get a thrashing!). I'm NOT prepared to use MiNT as I believe
that despite the argued improved stability of MiNT vs. MagiC, I think
the user-friendly aspect of MagiC leaves MiNT floundering in the
dust...

Sorry...its just my opinion from experience... :)

Your buffer is installed correctly - don't try and alter it.

>There was no capacitor supplied in my package. The 100 ohm resistor
>was supplied instead.
>Also the 33pf capacitor on the Buffer board was removed as the Nemesis
>addendum stated to.

Correct - each batch of Nemesis boards needed some different components to
cater for manufacturing differences which accounts for the varying
descriptions. That's what I was told by Titan anyhow.

>I am not sure if doing the buffer mod the way the original manual for
>the 24/48MHz Nemesis says to would help or make things worse?
>Anyone know about this?

As I said - don't touch.

>I tried two different Ram cards. A Ram Gizzmo and a RAM Karte which
>is similar to the Wizztronics one. It uses a single 72 pin Simm.

Since there are some important changes I'll be glad to email you the
contents of the disk at your request.

>I tried looking at the disk as soon as the package got here.
>When I saw that the disk was screwed up, I had a gut feeling that
>I would run into problems.
>Good joke ;)

That sinking feeling...

>And can replacements oscillators be found easily?

They are industry standard TTL oscillators.

Did you cut the pin (of the loose one) as mentioned in the manual?

Make sure that if you've cut the pins shorter that there is no risk of shorting - I had to put a piece of cardboard underneath the oscillator to insulate it.

>I am planning on another attempt to install it soon. I'd like to
>get some replacement oscillators if possible first.

I doubt that will help TBH.

>Now what I need to know for sure is, On the 25/50MHz Nemesis
>version, should this PCB track from Pin 1 connect with the
>thin black wire? Or should it be cut?

No track cutting on the Nemesis board is needed!

Yes, since HDDRIVER is not loaded yet when TOS tries to boot. TOS can't
even bootstrap the driver and this is why no driver can solve this.

Hi. Could someone write a nice GFA program that will display the time remaining until the year 2000? I've seen these at the post office, and think it would be nice to have this on the computer, perhaps a nice digital display in a window. I would be interested in the source code if anyone writes one. Thanks.

MiNT is a TOS compatible multi-tasking kernel. It replaces most parts of
TOS and is usually used either in a unix-like command line environement
or underneath a replacement AES like MultiTOS or N.AES to run GEM
programs in a multi-tasking mode, or both.

Without knowing more about your setup (what machine, which actual
distribution of MiNT, what you plan to do with it...), it's difficult to
tell how you would get it working.

The Quick FAQ should get you on the tracks, but it works the other way
round ("what software do I need to do this?").

Source record: 83343

I just bought an original Atari 14Mb RAM board for the Falcon. I
installed it, booted up, the memory test went fine and recognized 14Mb.
Only when I get to the desktop I find I have only 4Mb left. Somethings
eating 10megs, even on a clean boot. Some programs simply refuse to run,
saying not enough memory. I've tried running sysinfo.prg, and it tells
me I've got 14Mb of ST Ram, but only 3 or 4Mb free.

What's up ?

Yes indeed it would. But, I have taken a good look at the matter:
when you only want a POVRAY engine then a Celeron 400 MHz with (they
don't sell them otherwise I am told) Windows gives bets value for
money. Question of floating point mostly I think.

Hi Tim,

MiNT is for programmers, and MiNT is not for programmers only. It's a multitasking OS, that's what it is. If you would like to use it as an Atarian, you need a GUI as well, and the best choice would be N.AES, which costs money. In that case you only need to get the latest version of the Mintkernel, which is 1.15 version somuch. Plus buy N.AES and install it. Not a real hassle, I figure nothing more than installing MagiC or Geneva/Neodesk.
Well, you need a desktop with it, I would surely recommend Thing (perhaps Neodesk would work perfectly too).
The other way would be MagiC, you gotta buy that too, install it, give it a decent desktop and off you go.
MagiC and MiNT both are preemptive MT OS-es, where Geneva is a cooperative MT system. Theoretically the preemptive ones run faster/more efficient but I gather Geneva does a pretty good job as a cooperative one.
The "hassle" with MiNT is pretty much related to the "complete" MiNT bunch including Mintnet; in fact you add a Unix environment to your system. Together with N.AES you then have a MT modern Atari system plus a Unix environment at the same time, including a lot of functionality, like networking etc. This all is freely available, but will cost you lotsa download time for the megabytes you need to fetch plus the timeconsuming operation of setting it all up. Simple as that. As long as you're not looking for these features, you might just as well stick to your old setup, since this must be working OK for you. That'll be a question mark with the use of MagiC and maybe too with the use of MiNT/N.AES...

If you're satisfied with Geneva/Neodesk the way YOU are using it, I would say stick to it. If the stuff squeeks however, you might consider switching to either MagiC or MiNT/N.AES, but either way it's gonna cost you money and time, since you need to get to grips with both of them.

I used to work TOS 1.02; well the bombs and resets I considered as "normal"... then I got TOS 1.04 and it improved slightly. Fine. Next I got a machine with TOS 3.06, less bombs but not no bombs. Well, that's normal isn't it??? PC-owners have blue screens, and my friend-with-a-Mac had something similar too occasionally. Next I bought MagiC, and again I had problems. Only after somany time I got it working perfect: sometimes a program goes bezerk, but the OS simply goes on, kicks the app out and that's it. This really is a matter of fine-fine-fine-fine-finetuning, but right now that's where I got it. I also got the complete MiNT setup, including N.AES... this one still isn't as solid as MagiC here, probably a matter of the same fine-fine-fine-finetuning again. But it's 1000%-plus better than the old TOS!

Bottom line: if you're happy with your system, stick with it. You can always try and experiment as long as you have an extra partition to play with. Perhaps make another boot-system with the Mintkernel, try to fetch the Atari gem.sys, which is the old Multitos GUI and is available for free. Though it's said to be quirky and sluggish, it might give you an indication how your programs run on Mint. If that would go OK, next step is up to you...

HTH instead of confuzes :-)

4013. Re: Atari Online News, Etc. #0101

Newsgroup: comp.sys.atari.st
Date: 1999-03-06 00:00:00 UTC
From: dpj@delphi.com
Message-ID: <Z9XV+2G.dpj@delphi.com>
Source record: 83162

Alf,

>>A-ONE #0101 03/05/99
>
Why do you call this an Atari publication.

Because it is. Does it require that _every_ bit of information within
to be Atari-specific? Of course not.

>1/3 about Atari Jaguar

And your point is? How much Jaguar news is there today? When/if more
Jaguar-related news is available to us, we'll print it.

>The "People Are Talking!" is you publishing postings to this
>newsgroup. guess what? we read them when they are posted.

That's terrific! But how many of our readers have access to the
Atari newsgroups? How many people that have access prefer the way
that the "People Are Talking" column ignores all of the needless
bandwidth and summarizes the "good" stuff in one simple read? This
column has always been a popular item in our publications.

>Even the much awaited "Unabashed Atariophile" was all PC

If you read the column, you saw that Michael has been sick and not
able to put together his normal/typical column. But, he and I
wanted at least some background info available for the first issue.

>In the UK they passed a law that you could not call the good old "Meat
>and Potato pie" just that. because they always have more Potato than
>meat. they had to be renamed to "Potato and meat Pie"

Well, I'm not in the UK. <grin> Are you saying a daily newspaper
should not be called as such because it contains pages and pages of
advertising, the comics, crossword puzzle, and other non-news items?

>Sorry for this but considering the title of your publication it was a
>total let down to the point of feeling conned into the download. On
>the other hand if you have a Playstation or a PC then it is a dammned
>fine read ;-)

No need to apologize. Nowhere in our press release or in our editorials
did we say or imply that A-ONE would be solely Atari-specific material.
The information contained within is news & information that we feel
would be of interest to Atari users. If you don't care to know what's
going on in the computing technology world, fine. If you're not
interested in other gaming console news, fine. Feedback we've received

over the years has shown us that these topics, as well as Atari-specific news, is of interest. We can't please everyone all of the time; I wouldn't even consider it possible. <g>

Thanks for your feedback!

-Dana

Simple, the board is broken or the board doasn't gave the right
messages to two ram detect pins on the memory bus. Hardware must
know how many memory are avaiable.

>520stfm with a built in disk. now i can't use either of the two external
>drives. Suggestions? Abuse?

Any 520 only handle two floppy drives. Drive A and Drive B
(Drive 0 and Drive 1)

Internal floppy drives normaly A, any machine.

If you have one internal floppy (A) you only can use
one external drive (B)

So you have to remove the external (A) floppy.
Watch out for wireing! (Drive Select and some more)

Some manuals around they show all about floppy connections.

I have to agree with you here. I run my BBS of course, and I've got
a File Sig and Message Base dedicated to MiNT, but I know that at
least here in the US, an Atari based BBS is a rarity. ;-)

->Situation II: net access, in whatever form. Reading about it, there's

->People know it's for free (well, some work installing it).
->No wonder that just checking people with net access, Mint comes alongside
->MagiC, especially lately where a lot of development has been done.
->Should really be more installation-friendly, and then it wouldn't surprise
->me if it beats MagiC by far...

Agreed here too. There definitely needs to be an improved installation
routine for MiNT.

I have a radical idea. Have you ever installed Gribnif Software's
(Dan Wilga) Neodesk/Geneva? That installation routine is darn near
perfect. IIRC, Dan said that routine could be used, but I don't know
if he meant licensing/paying whatever.

Anyone with technical skills care to follow up on this? ;-)))

I think you just proved that one can do anything with stats. ;-))

I sincerely think you'll find that MiNT is the single theme
for that option (which I chose because I use N.aes/MiNT), so
36% is entirely accurate.

Well, just another thought:

I recall SuperMario (you know...) was working on a new graphics card.
I know several people would sell their mothers-in-law for a graphics card
(I may add that I won't sell mine and certainly not for a MIL)
I figure there could be many people interested in a networking card.

Why not design a card including an extension slot for the VME-bus???

We all know that once a GFX card takes the slot, you're done. Same with a
Riebl... Just adding one and one together...

<cut>
This is the case with SCSI drives. IDE versions of Q. Fireballs work great.
I've got Fireball ST connected to my F 030.
But then (i guess) IDE doesn't use initiator identification (or i'am wrong ?)

>
>I think that's correct.

But, I think that the Nemesis is compatible with
the new boards that Titan is working on.
Since I have a Expose, I'd like to get the Nemesis
working to get the extra performance it provides
for it.
Not sure if I could use the Expose with a CT2.
>

>
>What makes you think that then?
The lack of communication I have had with them
over the Apex Media disks that I had SFT send
them for upgrading. Also they never answered any
of my e-mail regarding my Nemesis problems.

>
>Well Apex Intro (full version) is on the new Renegade CD available
>right now from Atari Computing! :-)))

Thats great! Did Titan or Doug Little give permission to include
Apex Intro on the CD? And what version is it?
I have the full version of 2.41 and its a great piece of software.
I hope Doug Little will continue to code for Atari.
Doug is Cool!
How do we US Atari folks buy the Renegade CD?
Can you ship some of them over here to some of the Atari
dealers for us to buy or do we have to order them from
Atari Computing?
Whats the price in US dollars, if we have to order them
directly from Atari Computing?

>
>The CD also features full versions of Thing 1.09, Kandinsky 2.5,
>Adresse, Edith Pro, Two-in-one etc etc! :-)))

Super Cool! I've been waiting for a CD like this to come about. :)
I hope there will be lots more Atari CDs to follow soon.
Maybe I'll....ahem...

>
>I don't think Nemesis actually fixed it, more likely something got

Maybe re-sitting a chip will help it out.
I got some Falcon diagrams that a nice fellow was kind enough
to point me too. I'll look over them and see if the clock unit
is mapped out. If I find anything interesting, I'll post it.

>
>Dunno.

I would still like to know if any other part of the Falcon uses this
clock for anything else. If it is just for the time and date, then I
don't see any real problems it would cause. But if another part of
the Falcon uses it for timing or something, then it could cause
some minor problems. Not real sure about this. I wish someone with
knowledge about the Falcon clock would let us know.

I want to take this space to thank everyone again who posted and sent
e-mail regarding my Nemesis troubles. Thanks to all the feedback, I
think I have enough information to try another attempt at installing
the Nemesis board. I just need to find the extra time to try it again.
I'll post the results asap.
And if anyone wants to post/e-mail any additional info on installing a Nemesis
or whatever then please do so.

Thanks,
phantomm@kih.net

Well Folks,
I have Avalon for you 1.0 and I think even 2.0 !Also a huge manual is
laying somewhere is my room.....
So if you are interested.....
What makes me happy ?? Cubase Cuetrax, Styletrax, Studiomodule and
the English sample/midisequencer Breakthru (no demo's please)
You cannot help me with that ??
Perhaps you have a good working Atari mouse ??
You cannot help me with that ??
Perhaps you have some good working Syquest 44 MB cartridges gathering
dust....
You cannot help me with that ??
What about CDROMS for PC, concerning art, so painting,
architecture,sculputers , music, photography for example....
You cannot help me with that ?
what about a beautiful woman ??????????????
You cannot help me with that ?
Perhaps just a friendly ,thankful email will do.....
Jos Vlietstra, email <jovlie@xs4all.nl> - My collection :24 X Atari 1040ST,
4 X Megafile 30, 1X SH204, 1X Megafile44, 1X Seagate 500MB ext.,1 X
MegaSTE4, 1 x Seagate 2.1 GB ,1 X TT030, 1 X Crazy Dots graph.card
24BIT, 1 X Stacy4, 25 X SM124 monitor, 2 X SC1224 monitor, 2 X SM 125
monitor, 1 X TTM 19" monitor, 1 X DELL 17"SVGA monitor, 1 X Toshiba
SCSI CDROM ext.,1 X SLM 804 laser, 1 X HP500/510,2 X MEGA2, 19 X
Brother M-1109 printer, 1 x AM -148 monitor, 1 X 520PLUS USROBOTICS
56K modem ext.,tons of midisoftware, DTP etc. Got no shop,
just an Atari-fanatic since '87.....

today
> start charging later on?

AIUI (and I could have misunderstood some of this) In the UK at least, the free ISPs are only financially viable because of some anomaly in the charging mechanism to connect new private telecom networks to the privatised former public network (British Telecom). That, and premium-rate technical support calls, and advertising, of course.

So far, some of the pay ISPs are going free (Tesco and Virgin spring to mind), others may follow or add in services you don't get with the free services (eg content, fax to email etc a la Demon).

Long-term there are doubts about how long the situation will last as BT is apparently due to appeal against the current charging setup, which was originally put in place to allow competition for the provision of phone lines and services, AIUI. Effectively it's being abused by the free ISPs and means that BT is subsidising them.

BTW I have no connection to BT and am not particularly a fan of them for that matter (IMHO the communications network should be publicly owned, likewise basic utilities eg gas, electricity, and most of all water - I want the family silver back, TYVM), but the catch with free ISPs is that they are ripping off BT and its customers to line their own pockets. There is no such thing as a free lunch.

>>No track cutting on the Nemesis board is needed!
>
>Ahrg... ! :-)
>
>Sure, manual is hard to read on some points, but i can't
>remeber that i have to cut anything on nemesis board!

Maybe you didn't quite understand what I was trying to say.
There is nothing in the manuals that says that a PCB
track has to be cut on the Nemesis board.
I wish the addendum made this clear.
However, going by the Nemesis addendum, 2 capacitors
have to be removed on the 25/50mhz Nemesis board.
(Which is a bit strange)
Anyway, When you remove the capacitor in the corner,
it is very easy to cause a PCB track to become disconnected.
The addendum doesn't say if it should or should not be
disconnected. And can cause a bit of confusion.
Since I followed all the directions exactly. And my
Nemesis didn't work. I am going over everthing that was
removed from the boards and etc. To make sure everything
is correct. This is when I noticed this PCB track.
I was just wondering for sure if when the capacitor is
removed if this is suppose to disconnect this track or
not. Since this track connects to the leg of the capacitor
that has to be removed, then it joins up with the thin
black wire. The PCB track can easily become disconnected where
it joins up to the leg of the capacitor when you remove
it.
You really have to look at the Nemesis board to
see what I am describing here.
It is like this...
Looking at the Top of the Nemesis board in the left top corner.

Hole for second leg of the removed capacitor.
^
|
| * Thin Black Wire Connection.
O /
/ PCB Track.
O Hole from one leg of the removed capacitor.
|

|
|PCB Track From Pin 1 of IC.

Now around the hole from the removed capacitor there appears to
be a small copper connecting ring that the PCB track on both
ends connect to. And when removing the capacitor it is easy to
remove that connecting ring to, if you are not careful.
I just want to make sure that when removing the capacitor
that the PCB track is suppose to still be connected or not.
The addendum doesn't say why the capacitors have to be removed.
And with all the corrections and etc. This area is a bit confusing.
Just want to make sure everything is done correctly before I
attempt to install it again.

>Best way is to gave all the hardware to anybody they know
>what he have to do. Only a idea...
>
>Regards, Robert
>

I will try it myself, once more. If I can't get it working
then I will either send it all to someone else or forget it
and try another hardware upgrade.

>it.
>Not a real hassle, I figure nothing more than installing MagiC or
>Geneva/Neodesk.

Not quite. I use Geneva/Neodesk, and all it took to install was to run the included installation program, answer the very clearly put questions, and everything was set up exactly how you want it. There are no files to edit (unless you want to do more advanced things with it, in which case the files are pretty self-explanitory), and after the installation is done, just reboot and you're all set! With Mint, I have yet to even get a good, stable setup that's compatible with the software I enjoy using (without crashing within 30 seconds of boot-up). There are files to go in and edit by hand, and if you're not already familiar with the language, syntax, and operation of such files, it's a complete nightmare! I would like to get Mint working, since I've heard so many good things about it, but setting it up has so far turned out to be anything but easy!

>MagiC and MiNT both are preemptive MT OS-es, where Geneva is a
>cooperative
>MT system. Theoretically the preemptive ones run faster/more
>efficient but
>I gather Geneva does a pretty good job as a cooperative one.

That it does! It's just about as fast at multitasking as TOS 4.04 is at single-tasking. Also, Geneva can work as an AES for Mint, but it's *a lot* slower that way.

>The "hassle" with MiNT is pretty much related to the "complete" MiNT
>bunch
>including Mintnet; in fact you add a Unix environment to your
>system.

Actually, one thing I tried was to install the entire KGMD/KEMD kit, and (once I found out that I needed a different Hard Disk Driver) that actually went through just fine and I was given a very stable text-only Unix environment with very little effort. I like a graphical interface much better, however. But when I tried adding an AES to it, I was blocked at every turn by crashes and errors I didn't understand. This is where I see the "hassle" being. The Unix environment itself was pretty simple to get going.

>If you're satisfied with Geneva/Neodesk the way YOU are using it, I
>would
>say stick to it.

This is a very good point! For me, there's really only one reason I would have for switching to Mint, and that is that no one has made an ICQ client for STing. Most of my family is on ICQ, and I really want to be, too. But the question I have to ask is, is all this bother really worth this one program? I guess I'll have to keep posting my request for someone to make an ICQ program for STing!

..... :-)))))))))

Nope, doesn't count. I've seen no statements about PC owners running
PacifiST, Tosbox, Gemulator. IMHO the Magicmac and MagicPC ones don't
count at all. Let's just stick to MagiC (209) = 35% and MiNT (213) = 36%.

One can run MiNT on N.AES, Multitos etc, the OS remains Mint.

Not so for emulators. Hey, I'm sometimes running SoftPC here, does that
mean I'm using DOS 3.30 for OS?

I think Kellis said this before, but an Atarian isn't running MagicMac or
MagicPC.... sorry!

The CT2 certainly looks the biz doesn't it? :-)

>I dont think you can use a nemesis with a CT2 anyway.

I think that's correct.

>I am interested in the new boards that Titan is suppose
>to be working on. But not sure they would sell them to
>me if they ever do make them.

What makes you think that then?

>I don't have the lack of Apex 2.41 problem any more.
>No, the disks still haven't arrived. But no matter :)
>And its not a pirate version.
>Thats all I can say about that. ;)

Well Apex Intro (full version) is on the new Renegade CD available
right now from Atari Computing! :-)))

The CD also features full versions of Thing 1.09, Kandinsky 2.5,
Adresse, Edith Pro, Two-in-one etc etc! :-)))

>Hmmm...Well this strange Falcon clock mystery grows stranger.
>Some say the Nemesis didn't effect their clock. Your Nemesis seems
>to have fixed it.

I don't think Nemesis actually fixed it, more likely something got
knocked back/soldered into place! ;-)

>Do you have the 25/50MHz version?

IIRC it's the 24/48MHz (shows how much I know about the inside of my
machine!)

>I wonder if one version fixes the clock, while the
>other doesn't?

Dunno.

>I bought my Falcon used about 3 years ago, the clock has always
>been a bit slow. Probably came from the Factory that way.

Mine was bought used, and it was pointed out to me at time of
purchase that the clock bit was 'off'.

>Thanks Mike and eveyone who has posted and sent e-mail,

You're welcome, but it would be nice to know the cause and solution
for sure!

:-)

Check out my script on my Website.I changed my old Zetnet script to work with Freeserve but it can be edited for your needs for whatever isp you are going to use.Just put the username and password where I have told you in the script.

Some Free isp use CHAP which I don't think,correct me if I am wrong,get STiNG to connect to these.

One I have tested recently,after I wrote the review on my site,is Free4all.You can register online to this one and all your details will be e-mailed to you.I know that one works well.There Website address is:http://www.free4all.co.uk/

If you do decide to download my script and have any problems with it,E-mail me and I will help you though it.

Gordy.

> the Falcons to France! ;-(
>

:). Don't they all. I only am in contact with one Centurbo user, he is very experienced with the Falcon. I know he too had some problems, but I think the fixes were concerning their software (which AFAIK has been updated a few times). I think that KELLIS has been doing some bragging of late as well:). Wizztronics didn't want to play the game where every third Falcon owner had to have a custom installation on his machine. They had (actually still have, but refuse to have a garage sale) very trick hardware for the Falcon. I guess what I MiNT was, once properly installed, a compatible piece of hardware.

I don't really think the Nemesis fits in the same league as the Centurbo. EOL. I have a Mighty Sonic which has its own 030 and 32mb of fast ram, and runs stable at 32Mhz,but takes quite some tinkering getting it to run at 40Mhz. The Centurbo benchmarks blow this card in the weeds. The Afterburner wins out in the speed department by shear power over the 50Mhz 030. But the Centurbo is a much more advanced approach to improving the Falcon than the Afterburner was (note was, only available second hand now). Features like user upgradable flash memory and modified O/S features make it a desirable card for the future of the Falcon. A 50Mhz 030 by todays standards isn't very fast, and a lot could be said of the new card that Titan is suppose to market, except now they will have competition from a company that looks like it will provide support for its products. It's hard for a dealer that only markets a product to offer technical support when the product they market is made in a different country. Centek has an advantage there, IMHO. They also have a web site where the files needed for their products are actually available for download, and products they advertise are still available, not just used as a banner for their company (other wise I would have some GAL's and documentation by now, IUGMD:). Anyway, they each have different features. That can only have a positive effect for Falcon owners. More choices, not that one is better than the other. For as short lived (production wise) as the Falcon was, we have a fine assortment of hardware that is available to us. The downside, almost all of them require at least the desire to perform a

few technical modifications. But then what are toys for?:).

Still learning after all these years,

Mike

4058. Has anybody ever seen/heard this before!!!

Newsgroup: comp.sys.atari.st
Date: 1999-03-06 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <yAfE2.192$Rx6.509@198.235.216.4>
Source record: 83245

I thought the following was IMPOSSIBLE and I have never SEEN this EVER BEFORE.

I was using FILE copy operations within MAGIC 4. I was simply moving some files from floppy A:\ to Floppy B:\ in order to free up a disk and fill up another one.

I selected four folders to copy from A to B.

After copying the FIRST folder to drive B an ERROR message appeared when attempting to copy the second folder.

The error message was... Destination Disk is WRITE PROTECTED.
So I popped out the disk in drive B and SURE ENOUGH it WAS WRITE PROTECTED.

However the FIRST FOLDER I COPIED FROM A TO B SOMEHOW made it on to FLOPPY DISK in DRIVE B.

Thinking that perhaps MAGIC was Tricked into thinking the first file was copied but really wasn't, I popped the disk out stuck it in my other ST running TOS and SURE ENOUGH the ENTIRE FOLDER was COPIED to DISK B. The disk was STILL WRITE PROTECTED at this point.

The disk is a STANDARD DD floppy.

Now from all my WISDOM and KNOWLEDGE, ISN'T this 100% IMPOSSIBLE?

HOW COULD AN ENTIRE FOLDER BY COPIED TO A WRITE PROTECTED DISK?

BTW. I CAN'T COPY ANYTHING ELSE TO THIS DISK NOW WITH WRITE PROTECTION ON.

I CAN'T MAKE THIS REOCCUR and I HAVE NO WAY TO EVER PROVE THAT IT HAPPENED.

All I can say is that I had TWO WRITE PROTECTED FLOPPIES in drive A and B and somehow the physical write protection was bypassed.

I have never taken a sanity test, so I may be crazy or mad but I am not hallucinating.

Well there is a first for everything.

STrange but TRUE.

Later
Brian.

4059. WRITE PROTECT ON FILE COPY REPEATED

Newsgroup: comp.sys.atari.st

I am using NVDI 4.11. I Cannot get this to work in single TOS. It only
will boot with Magic installed.

If NVDI is the ONLY THING in the Auto folder, it comes up
NVDI 4.11 then is promptly followed by 4 bombs.

Any ideas.

I would like to use NVDI in SINGLE TOS as well as MAGIC.
I am getting FRUSTRATED.

Later
Brian.

Interesting!

Maybe something caught the switch and so enabled disk writing to happen!

I had a problem with a disk drive once, it had me baffled for ages. The drive kept on reporting track 0 reached, even at track 80!! I took it apart, still the same. I sussed it in the end, it was a speck of dust that had cover the light sensor for track 0!

I have also come across the opposite to what you described.

>lines and services, AIUI. Effectively it's being abused by the free ISPs
>and means that BT is subsidising them.

Although I believe all of what you say John I do have one point to
make. Perhaps it is misunderstanding on my part.

I use Demon and connect to them using an 0845 number, which is a local
rate number. From what I have seen of Freeserve they use an 0845 as
well, in fact the number I saw was only about one digit away from
Demon's. This means that BT are getting money from every call I make
and every call that people make to Freeserve regardless of whether they
are paying the ISP directly.
So I don't really see how BT are suffering from this. It is
encouraging phone line use, more money for BT, and the infrastructure
is already there so there is little outlay.

Rich.

I'd love to see an ICQ client for STing as well...
Also on my wish list is a really fast, full color vt102/ansi telnet client in a TOS window, with all the/fully functional VT102 bells and whistles and the ability to cut/paste to the gem clipboard via the mouse.

I guess a STing port of TinyFugue, or some such MU** client would be nice as well, but then that wouldn't be necessary with a good telnet client and access to a good ole prefered UNIX shell account :)

Just my wishes...
Brian

I disagree with this statement, Louis.

It shouldn't matter what type of hardware MagiC is running under. Anyone
serious enough to buy it for the PC or Mac is obviously an 'Atarian',
unlike most people who simply abandon the platform altogether.

It's the person in front of the machine, not the machine itself.

As the title says:
4Mb Falcon with FPUand 1Gb external Seagate HD
Apex Media, AudioTracker, Lattice C 5.5 and Obsession (plus others).
Commodore MPS1270 inkjet printer
Manuals, boxes, magazines, etc.

Plus, before I change my mind and find room for it, SGI Personal Iris 4D/25 with full set of colour matched SGI manuals. (This needs boot tapes/CD. I have a bootable SGI CDROM to lend the buyer and a QIC drive is included. It runs IRIX 4.05 - 5.3, I only have 6.2). It'll run Blender, Navigator 4, etc. It has a 24 bit 1280x1024 IrisGL GR1.2 graphics set with Aux. planes and genlock options, 16Mb memory, SGI keyboard and optical mouse. It's R3000 based.

400 pounds for the lot, or offers on them individually.

Carl.

Who will all be running single TOS or MagiC (which works on Gemulator, I'm
told).

> IMHO the Magicmac and MagicPC ones don't
> count at all.

Why not? MagiC is MagiC irrespective of whether it's on an ST, TT, Falcon,
Hades, Milan, Mac, PC. In the case of MagiC under Gemulator it's exactly
the same MagiC as you'd run on your ST or whatever. Likewise TOS on
Pacifist, Tosbox etc is the same TOS as you'd run on an ST etc.

> I think Kellis said this before, but an Atarian isn't running MagicMac or

> MagicPC.... sorry!

So what about those of us that own Atari hardware (running MagiC, TOS and
MiNT, FYI) and run MagiC/TOS on non-Atari hardware? Am I no longer an

Atarian, cast into the outer darkness?

walks off on lonely path through barren, windswept landscape

turns round, squares shoulders, takes up cudgels again

This is just hardwarism (do I get the prize for tonight's new word? And very PC, too *groan*). And just where does all this leave MacMiNT? Probably out in the cold too, I guess... :->

I know I said this before (to kellis, as I recall):

Atari hardware running Linux or NetBSD: runnable Atari programs=zip (unless, shock, horror, they use STonX/TOS...).
Non-Atari hardware running TOS or MagiC: runnable Atari programs=loads.

Who's the Atarian then? QED.

:But, I think that the Nemesis is compatible with
:the new boards that Titan is working on.
:Since I have a Expose, I'd like to get the Nemesis
:working to get the extra performance it provides
:for it.
:Not sure if I could use the Expose with a CT2.
:>What makes you think that then?
:The lack of communication I have had with them
:over the Apex Media disks that I had SFT send
:them for upgrading. Also they never answered any
:of my e-mail regarding my Nemesis problems.
:
yes. I've had similar problems upgrading to the latest ApexMedia.
I figured that since I purchased the Nemesis, it didn't make sense for
me to have to pay to upgrade ApexMedia to take advantage of the Nemesis
upgrade. Since the ApexMedia upgrade was only needed if you got the
Nemesis upgrade, and since they both come from Titan, I thought they
should upgrade my ApexMedia for free. David Encill agreed, and I sent
off my disks to Computer Direct (from whom I originally purchased
ApexMedia, and Videlity, and Nemesis) as I was told that Chris
Krwochul was going to send a bundle of disks/orders off to the UK,
which then went out of the Atari business, so Titan never received my
ApexMedia original disks (I'd already paid for a previous upgrade) so
they won't give me ApexMedia upgrade (only usefull if you have the
Nemesis upgrade). C'est la vie. Now I have no original ApexMedia disks!
:-(
So any further upgrades are out of the question, that's it for
ApexMedia for me.

:>
:>Well Apex Intro (full version) is on the new Renegade CD available
:>right now from Atari Computing! :-)))
:Thats great! Did Titan or Doug Little give permission to include
:Apex Intro on the CD? And what version is it?
:I have the full version of 2.41 and its a great piece of software.

Source record: 83265

>> Why not make a combined Ethernet and Graphics VME card ?
It is very easy to design&create the interface. But who is going to write the VDI driver? and where are we going to find a suitable graphic card?

The reason NOVA stopped production was not because demand fell, but because there are no more graphic cards with ISA interface on the market. Because of technical reasons it is not possible to convert a PCI card to VME signals.

You could try to locate a ISA card on the second hand market, that's what I'm doing since a couple of weeks.....all ATI MACH cards with ISA interface seem to be vanished from the face of the earth....

Even if you locate a card, then there is still the "legal" stuff to think about. NOVA is still in business, I suppose we just can't steal their driver, certainly not if the card&interface would be a commercial product....

Cheers from Belgium

Dennis

PS: if anyone out there knows where I can get one or more ATI MACH64 graphic cards with ISA interface, they would certainly make my day-))

Hi Mike!

->Not quite. I use Geneva/Neodesk, and all it took to install was to
->run the included installation program, answer the very clearly put
->questions, and everything was set up exactly how you want it. There
->are no files to edit (unless you want to do more advanced things with
->it, in which case the files are pretty self-explanitory), and after
->the installation is done, just reboot and you're all set! With Mint,
->I have yet to even get a good, stable setup that's compatible with
->the software I enjoy using (without crashing within 30 seconds of
->boot-up). There are files to go in and edit by hand, and if you're
->not already familiar with the language, syntax, and operation of such
->files, it's a complete nightmare! I would like to get Mint working,
->since I've heard so many good things about it, but setting it up has
->so far turned out to be anything but easy!

Dan Wilga's installation routine for NeoDesk/Geneva is near-perfection.
I really liked his software, while I used it... ;-)

->That it does! It's just about as fast at multitasking as TOS 4.04 is
->at single-tasking. Also, Geneva can work as an AES for Mint, but it's
->*a lot* slower that way.

Only complaint I had was when I kicked up to 800 x 608 x 256 colors.
On my Nemesized Falcon, at that res, NeoDesk/Geneva became very slow.
I'm running Thing v1.27/N.aes/MiNT now, at the higher res, as fast as
I was with NeoDesk/Geneva at 640 x 480 x 256 colors. Thats the diff.

->Actually, one thing I tried was to install the entire KGMD/KEMD kit,
->and (once I found out that I needed a different Hard Disk Driver)

Whoah. Why a different hard disk driver? AFAIK, all major HD software
for TOS does work.

Atari AHDI
HDDriver
ICD's Pro Utils (although it does not support XHDI, or Minix partitions
greater than 64 megs. I used a 60 meg partition okay)

->This is a very good point! For me, there's really only one reason I
->would have for switching to Mint, and that is that no one has made an
->ICQ client for STing. Most of my family is on ICQ, and I really want
->to be, too. But the question I have to ask is, is all this bother
->really worth this one program? I guess I'll have to keep posting my
->request for someone to make an ICQ program for STing!

->
-> Mike Freeman
-> nameerf@flash.net

Isn't someone supposed to be working on a GEM version of ICQ?

John,

let me differentiate: (this is my personal viewpoint) - The ones occasionally running MagiCPC/-Mac/Tosbox/Pacifist/whatever on their PC's and Mac's as opposed to mostly running their native OS, I don't consider Atarians... Heck, there are times I frequently run SoftPC on my system, that doesn't make me a PeeCee character...

OTOH, I know there are several people in this NG who operate PC's to write messages, use Mac's and MagicMac perhaps to do so. At least they regularly contribute in here, so I consider those as Atarians.

It's different again with those owning lotsa Atari gear, but never bother reading this NG or related ones. They're ICQ-ing on the Net by means of their PC's and Mac's. Are those Atarians? IMO not the real ones.

One can discuss endlessly about this matter.

The next few weeks I'll probably work 12-20 new PC systems: hardware upgrades, finetuning S/W, preparing them for networking, installing S/W... I already know I'll be glad to get home again and operate my TT system... (BTW: I suggested to the system-manager to get Linux and Samba for those machines, but nope, they'll get NT...)

From: jmirando@portone.com
Message-ID: <7budnt$ab2$1@remarQ.com>
Source record: 83100

Alf,

A-ONE is aimed at Atari users... not Atari computers. I can remember back to when we (then with STReport) caught flack for printing non-Atari-computer related material. We were at the WAACE show in Wasington DC, giving a talk on where the platform was going, when someone had the same type of comment as you have now.

The person at the time complained that he had no use for information about IDE drives. It was true right at the time, but a month or two later, Atari announced that their new machine, the FALCON030, would have an internal IDE drive.

Did one have anything to do with the other? No. But it does go to show that you never know what info might be important to you in the future.

It's almost impossible to know for sure that info you'll need in the future. Even if it's only so that you know what 'the other guy' has for options, it really can't hurt to have the info.

I'm sorry that you felt let down by the content, but give it a few issues. Maybe it'll grow on you.

By the way, here in the states we also have a 'content law' for food which states that food products must be advertised by content. The only exception to the law seems to be "Pork and Beans" because nobody would buy "Beans and Pork". I'm not exactly sure of how this might relate to the current topic, but as I said information is information. <G>

What's your 'thing'? If it's something you'd like to write about for a publication aimed at Atari users, why not give it a whack and submit it to us. We gratefully accept submissions.

Keep on readin',

there's been an extremely big stink about the Pentium III and its
serial number over here - so much, indeed, that several organizations
have been calling for a boycott of all Intel products until the serial
number is removed.

Some wags have been saying that Intel's new advertising slogan
should be "Intel Pentium III - Big Brother Inside" :)

Seriuosly, there's been an excellent thread on this subject in
comp.sys.mac.advocacy....

Hello world,

Just a quick note to announce that the Ultimate TOS Software Index aka
UTSI holds now 1110 links. For the right URL see my sign off.
You can find out what's new since 1 december 1998 (the day I took over the
UTSI) if you follow the *news* link

Quit a lot of previous not working links has been corrected. There are
still some non-working links however. I hope I can correct then some day.

No, the switch can go wrong. I have a drive that sometimes (even when
copying) tells me: 'disk write-protected, cannot write.'
Taking disks out and inserting again makes behaviour ok mostly.
Sometimes taking it in and out for the holy 7 times is needed.

So the other way around the switch can be at fault.

Yet another strange floppy story:

Once (back when I was using my old 1040ST), I was doing some work on a word processor, and after I had finished, I quit, took out the disk, and put in another to play a game. When I openned the directory window for the game disk, it was suddenly the same as the directory on my word processor disk! I thought it was just a fluke in the system somewhere, so I updated the window, and it didn't change. I rebooted and still the disk was showing the files from my w.p. instead of the game. None of the files worked of course, and to the day I finaly gave up and reformatted it, it never again contained the game directory it originaly had!

Hi Robert,

If you do find out for sure about the PCB track I described,
please let me know.

Also, If anyone else has a Nemesis 25/50 version installed
in there Falcon and can easily remove the top case and take
a look at the Nemesis board. I'd sure appreciate it.

I'd like to know for sure if that PCB track is suppose to
be still connected with the capacitor removed.
I think it is suppose to be, but I really need to make sure.

If the capacitor was removed by cutting the legs then the
PCB track will still be connected.
If the capacitor is removed by de-soldering it, then its
really not clear.

The addendum just says to remove it.
It doesn't say how or why.

If anyone can take a look at it and post or e-mail me
I'd sure appreciate it.

Thanks,
phantomm@kih.net

> Mike Freeman
> nameerf@flash.net

What you have described is a common problem and is not a one off. It's
all down to media detection system that is used.

If you had a sector editor and looked at the disk, I'll bet you would
find TWO directories: (1) your original one, taking for granted that the
game was in file format. (2) a copy of your word processor disks
directory.

The most common way of duplicating this error is the following, not 100%
but a good 75%: We are talking floppy drives here;)

From the Desktop open a drive window so you have a directory, remove the
disk and replace with another write enabled disk. DO NOT close the open
window or press the ESC key. Perform some sort of write function, save
desktop or a file.

If all has gone well this should have recreated the effect. It isn't
fool proof and will not work every time. With some drives it works every
time.

Some games & demo disks will NOT show a directory, they will either show
garbage, with possible crash of machine on some TOS versions, register 0
bytes in ALL the fields in the disk info dialogue. After changing and
attempting to read some of these disks, you may find that the directory
windows will NOT be updated no matter how many times you open and close
it. If this happens REBOOT, ideally a cold start (switch off)

I have come across this problem so many times, it's very common. I've done it myself a few times;)

There is a chance that this can be repaired, but not always. Only attempt a repair if you KNOW what you are doing.

The best way is prevention, always make sure the correct directory is showing when you do any disk write AFTER you have changed disks.

This posting isn't a 'blow my own trumpet' ego trip, the problem CAN be a serious one especially if you've just lost a couple of years work because the directory has been wiped out.

If this has happened, I may be able to help.

I wasn't intending to start a major discussion, just pointing out that the
free ISP jamboree may be short lived. Apologies for the minor instrusion of
personal politics.

> BT aren't the only telephone company in the UK, that's what you get with
> competition. Just like British Gas, they share resource, probably put
> there before privatisation.

But it's *not* like BG. The infrastructure for gas is now separate
(Transco), so BG is competing on an equal footing. In the case of BT, the
other companies get to use BT resources and infrastructure at preferential
rates: it is not a level playing field.

> Now ripping BT off! I use BT and C&W, amongst others, and they all offer
> different rates and advantages. BT still gets the line rental, money for
> old rope an all, and extra for other facilities they provide plus the
> costs of calls. C&W, used to be called Mercury, again I pay for calls
> and a nominal monthly charge, which is nearly given back in free calls.

Which is only viable because BT provide the connection to the door in most
cases, at a preferential rate due to the privatisation legislation. BTW I
also use C&W: I did say I am not an unthinking admirer of BT - I'm just
don't think that other companies should be able to freeload on them simply
because they are the remains of the public telephone system.

The last system manager I spoke with has something like that on the
job.
management decided to use NT while they had until then everything
network-like running with a Unix.

That was the end of the fun for him.
"NT out or I out", he said.

Now he has a better nicer job elsewhere, they have NT but nobody to
get it running.
Luckily for that business the Unix stuff can run on and on so they
could keep in business..

Do you know that every CPU that can be in a system (on a bus) with
more CPU's of the same time needs a unique ID? That is the only way
to be sure which of your CPU's is complaining with an exception,
error or so.
Also the 68030 CPU has a id-number.

> If VFAT is not enabled, you will not see long file names under MagiC, let

Then there's a bug in either MagiC or Spin.xfs for MagiC, because VFAT has absolutely *nothing* to do with long filenames on other filesystems! VFAT is a part of one particular filesystem and does not affect other filesystems. Period. Perhaps your desktop/fileselector checks for the presence of VFAT and (wrongly) assumes that long filenames are not available if it's not present.

> alone copy them correctly, I can't speak for MiNT as I don't use it

Both Spin! and MinixFS has worked with long filenames long before MiNT got VFAT-support.

> Under TOS you NEVER can see long file names no matter what DOS or BOS driver
> one uses.

This is simply because none of the existing DOS-drivers (BOS-drivers are *hardware*-drivers had has nothing to do with filesystems) supports any filesystems with long filenames ;-) There's nothing with TOS, MetaDOS or DOS-drivers that limits this.

>>I would say that the Mac's inability to read anything else than 9660 and HFS
>>is a serious limitation...
> What formats can your PC handle? If you like I'll send you a couple of atari
> CDs which your machine will NOT be able to handle, that's a serious limitation
> also if you ask me

Was I defending PC's here? ;-) PC's are slightly more flexible than Macs in this area, but nothing beats MiNT or MagiC with Spin!

>>Under TOS it won't even work IIRC, so you need a separate DOS-
>>driver. AFAIK none of these supports anything else than 9660.
> No, You don't remember correctly. I suggest you take a good look at the SPIN
> docs, they were written to serve a purpose. SPIN does run on Single TOS.

Spin does *not* work under TOS, period. Unless somebody has come up with a clever way of using XFS' under TOS that is...

Btw. Julian Reschke will release Spin as a DOS-driver (i.e. a version that will work under TOS as well) if there's interest in it.

> While on the subject, I use the HS_ISO.DOS driver, which is perfect.

This is a DOS-driver for ISO9660 filesystems, not Spin.

>>Nope. Spin! is a XFS for either MiNT and MagiC (but depends on MetaDOS with a
>>proper BOS-driver), so it will not work without one of these.
> SPIN comes with his own BOS driver: SPIN_SD.BOS, under MagiC it doesn't need

A BOS-driver is a *hardware*-driver, and has nothing to do with the filesystem. You still need a DOS-driver to access any filesystems on the CD, and (repeating myself) none of the existing DOS-drivers supports anything else than ISO9660.

> MetaDOS but is perfectly happy with the supplied METAXBS.PRG.

MetaXBS is MetaDOS but unable to load DOS-drivers. BetaDOS will also work well, it will actually work better with shared libraries under MiNT.

> MetaDos is needed when you run SPIN on single TOS, which according to you is
> not possible and the SPIN_SD.BOS has to be activated in whatever OS you run.

MetaDOS is needed under TOS because it must also load a *DOS*-driver, which MetaXBS can't do. The BOS-driver is loaded by both. Please try to understand the difference between DOS and BOS.

> Conclusion:
> Burn the CD in HFS, under SPIN the CD can be read on ANY Atari, under MagiC
> and MiNT long file names are visible. To make the CD 100% compatible avoid

This is my final word on this, unless someone else points out any errors I will not contribute more to this thread: Spin does not work under TOS. No way. Anything else than ISO9660 CDs are 100% unreadable under TOS, since no compatible DOS-drivers exists (unless there's something for ExtenDOS, which I have never tried or even seen).

Long filenames has nothing to do with VFAT, MiNT, MagiC or anything else than the actual filesystem-driver itself. So a DOS-driver with HFS- or Joliet-support will work with long filenames under TOS as well.

> Why make it complicated if it can be done simple?

Indeed...

4105. Quantum ST 12400N won't boot !!

Newsgroup: comp.sys.atari.st
Date: 1999-03-07 00:00:00 UTC
From: jovlie@xs4all.nl
Message-ID: <7bv0vidca1@news2.xs4all.nl>
Source record: 83120

Hi friends,
The HDDRIVER/Quantum/Seagate bootproblem continues.......
Do you remember I had a Quantum Atlas ??
Okay, it didn't boot....I understand at last why.It's a TOS problem ,
which can only be solved if you patch TOS.
Sorry, that's too much for me.
So I put my Seagate ST3610N (520MB) in the TT030 , and without many
problems, it works !
But.........I still want to have more capacity, so a fellow called
me and offered me his Seagate ST 12400N (Hawk series) of 2.1 Gb.
He was willing to buy my Atlas and with a little more money extra I
had this bigger Seagate !
You never saw a happier Dutchman ! When I returned at home I put the
jumpers the same way on the Hawk as on the ST3610.
Then I tried with HDDRIVER to get the thing bootable.But...........no
sir, I won't see you, that is in the ID check I see :
SCSI 0.0 Atari SH/Megafile Direct Access
SCSI 0.1 Atari SH/Megafile Direct Access

So there were TWO Scsi adresses !! I don't understand that.
Then I tried to connect the Hawk as 2nd drive with my ICDLINK cable
(ASCI bus). That worked !! The ID check from HDDRIVER gave me the
right ACSI adress and the right name SEAGATE 12400N.I could format,
partion and copy all the files from my ST3610N. I saw the partitions
on my Jinnee-desktop.Then I tried to replace the ST3610 with the Hawk.
Well, friends, that didn't work..... The first time I saw HDDRIVER
gave the partitions and a cache of 335 but for the rest failes to
boot.I tried everything for many hours. Is there somebody who can
help ??

The PC can't read HFS, the Mac can't read Joliet :-/ You're stuck with a plain and stupid ISO9660, which means 8+3 filenames, no extenders in folder-names and only 8 levels of subdirectories (which is also the limit under (some versions of?) TOS).

> This ofcourse is the most important thing.
> But in addition, since I have a Mac and will most likely use it for
> reading the CD, some nice icons (readable on the Mac) would be a nice
> addition instead of boring old plain icons.

HFS would keep the resource-forks (which also contains icons unless I'm completely wrong), but the PC won't be able to read the CD. You can't get it both ways ;-)

Correct, it's a Sony. A really good one too.

> "backing up" certain CD's has nothing to with the hardware. I can make
> "backups" from Playstation CD's since August 1997, these "backups" are perfect
> and I don't need a PC to do this...my humble TT does it without complaining.

Really? What software do you use?

> Questions for You..(these depend on the hardware..)
> How do you make a "backup" from a 720Mb CD on the combination PC & HP 8100 ?
> How do you copy a audio CD containing 82 minutes of data ?

The 8100 does not support "overburning", so anything over 80 minutes is a no-no.
Whether this is a bad thing is a matter of discussion, I prefer readable discs over
discs with those two extra minutes ;-)

> All the above, just to name a few can be handled on a TT with CD recorder Pro
> on a TEAC 55S also a excellent machine.

I'm sure the expensive SCSI CD-R is a nice piece of hardware, but it would cost me
more to buy a 4/24x SCSI CD-R, a new SCSI HD and CD-Recorder Pro than getting that
partly sponsored 450MHz PC...

> Oh yes, audio grabbing takes place at 8x, without faults, something which a
> HP8100 can't even accomplish in a modest 4x

I'm an audiophile and hasn't so far noticed any flaws in the HP's 24x
audio-grabbing.

> Enjoy your PC.....

I really don't have to defend myself for having a PC, atleast as long as I'm using
my Falcon 95% of the time. But there are things my Falcon just can't do as well or
cheap as my PC.

Can you explain exactly what this "atari format" is? Is it a FAT-image? If so,
then it's not readable on anything else. Also, you still need a special
filesystem-driver for it.

>system font.

Eeeek! I can't even *think* of altering the dozens of files in the apps
I mentioned, just to get non-proportional, especially in Texel. I could
not use PageStream without prop fonts. EdHak doesn't use them anyway,
not does the Protext screen.

It is a pity that MagiC fights against Magtorom, so kindly provided by
Dr Uwe to prevent it doing this very thing.

Thanks, Thomas and Bengy (must visit your site, obviously), for the
explanation. I'll be very careful, promise :)

Cheers,
Charles.

Ever heard of fVDI? You can write low-level drivers for fVDI and save a lot of work, since you don't have to write an entire VDI. The same applies to NVDI, but the interface to NVDI's hardware-drivers are not available to the public.

You can also design your own video-chip...

> The reason NOVA stopped production was not because demand fell, but
> because there are no more graphic cards with ISA interface on the
> market. Because of technical reasons it is not possible to convert a
> PCI card to VME signals.

What's the problem?

> Even if you locate a card, then there is still the "legal" stuff to
> think about. NOVA is still in business, I suppose we just can't steal
> their driver, certainly not if the card&interface would be a commercial
> product....

The driver is bundled with the Nova interface, and not the graphics-card itself. You can also use the completely free fVDI Mach-driver (is it complete yet?)

For a _properly_ designed et-4000 VME gfx card no drivers would need
be written as NVDI et4k will drive it. I now have a CrazyDots gfx
card and NVDI indeed drives it all on it's own. I could not get
NVDI to drive the Nova card and I think it was because of the VME
adapter requires some extra code to start it up.

[snip]

>I _could_ have acquired several VME cards designs for rather cheap, but
>since I cannot purchase ET-4000 chips anywhere, what's the point?

That is a serious problem and it's a shame one cannot get the chips.

It doesn't surprise me, Ronald, that such a purist attitude comes from a MiNT user. After all, MiNT users have a disdain for MagiC anyway, especially Falcon owners, some of whom had nothing but problems with it on their machines.

I say this with a tongue-in-cheek attitude, not meaning to inflame <g>. But there's the danger of elitism when it comes to what an Atarian is.

> This is a tricky area though. I've also heard people say that the
> Hades, Medusa, and Milan are not "real" Atari machines either. I
> disagree with them too, after all, these machines were designed with
> the TOS market/users in mind, and thats the key element to me...

My contention is that it doesn't matter what hardware is being used. As Henk said, it's the software itself that counts -- these are the ties that bind us into a single collective.

BTW, I'm poised to make the move to MagiCMac (no surprise considering my views here). With the MM demo I can enter a very familiar world, one that I've invested time and money into. For me it makes no difference at all -- besides speed -- whether I'm using MagiC on the Atari or on the Mac: both are the same thing from a working perspective.

This purist attitude (as I called it) towards emulation is probably due more to the fact there's another OS resident, one the user is likely to run for certain tasks -- a form of computer treason to some Atari die-hards.

Hypothetically, if an Atari dealer sold Macs preconfigured with MagicMac, would that make any difference?

>I have the german version of papyrus 6 but i can't read german, Does
>anyone have the english resource file for this programm. (I assume the
>langauge is in the RSC, But it may also be in the PRG)
The only one who has the RSC files (according to them) is R.O.M, they've
been promising a English version since November 1997.....
In the meanwhile version 7.0 has been lounched (october 1998) and yes a
English version was again promised.... 6 months later there is still no
sign of it....

R.O.M has a policy, they promise you that if they don't continue the
development of Papyrus within a year, your entitled to get your money
back. I suppose You qualify, because they didn't improve anything since
version 5.xx. where English users are concerned. So, get in contact with
R.O.M and ask for a refund on the base of their policy -)))
If you ask me they just don't give a damn about their customers outside
Germany. How hard is it to translate the RSC file? I know some people who
could do it perfectly, and wouldn't even charge money for it.

Except for Calamus, most of the German softwarehouses just don't bother, so
if your knowledge of German is minimal, You'll have to take this in account
.
I'm thinking about putting translated RSC files onto my "soon to come" website
but I'm not sure about the "legal" status, can anyone inform me about this?

Cheers from Belgium

Rome wasn't build in one day too.
Please remember that all the work is done by just a few people, who have all a regular job. They are doing this in their spare time.

Back in 1995 there was an easy to use installation prog, called the TAF package. I've installed it without any hassle one a dozen of machines. It still can be used but it's outdated.
>
>IMHO it will take a wizard to write a installation prog, wich keeps track
>and make sense of the chaos MinT is.....

This depends on what one will use. Just MiNT with N.AES or Geneva is a peace of cake. Just a matter of copy the mint.prg into the auto folder and editing mint.cnf and n.aes.cnf or gem.cnf.
This change however if one will use the full distribution. I must admit that this isn't that easy.
KGMD offers a so called easy-to-install kit but on some machines there seems to be a problem. Last year I did the KGMD installation on my TT030 in just 30 minutes. However I couldn't follow the proper installation procedure on my Hades 060 because there was a problem with the installation of the RAM disk. A while ago someone, I thought it was Louis, posted in this newsgroup the answer for this problem. Due a major harddisk crash (no recent back-up ofcourse) I lost the answer. So if someone knew the solution for this problem please post it again.

>all the different hardware configs which are around....

I can't follow you on this. What do you mean by this?

I keep repeating it. The installation is as one use his brains reasonable easy. Using the brains is something one doesn't do these days. Everything should be as easy as possible. I prefere to install as much as possible myself. This way I know where to search if a problem arise.

BTW: The MiNT '98 distribution CD contains an easy-to-use installation
packet.

Firstly, this isn't really the correct newsgroup for discussion of Free
ISP's alt.internet.providers.uk.free is more appropriate;)

How do they make the money to provide a FREE ISP service is the essence
of the above.

Ripping BT off, I think not!

BT aren't the only telephone company in the UK, that's what you get with
competition. Just like British Gas, they share resource, probably put
there before privatisation.

Connect Free tell you quite simply HOW they are able to provide a free
service. They ALL use a phone company, of which they get a fraction of
what the call has cost the customer. e.g. I ring up at BT's 1p weekend
rate for an hour (60 mins), the ISP may get 6p of the 60p call.

Now ripping BT off! I use BT and C&W, amongst others, and they all offer
different rates and advantages. BT still gets the line rental, money for
old rope an all, and extra for other facilities they provide plus the
costs of calls. C&W, used to be called Mercury, again I pay for calls
and a nominal monthly charge, which is nearly given back in free calls.

An idea that's looking to show it's face is where adverts pay for the
costs, X-Stream comes to mind and they are offering members FREE
connection from Monday 6.00pm GMT (tomorrow) and they have been running
adverts to pay towards the costs for a while.

http://www.x-stream.com

Fancy international calls at national call rates, even local call rates if you live in their areas. OK you're restricted to certain countries and areas: New York, Miami, Paris, Brussels & London are those I can remember. All you have to do is put up with some adverts during the phone call.

Phone 0870 7878 690 answer the questions (tone phone essential), you'll get a pin number and away you go;)

Hello everybody,

I've made some fonts wich are bitmap versions of vector ones, and I think there quite usable. So if you want to gain some time on the net (as page formatting with CAB is faster with bitmap fonts), you can download my pack at:

http://www.multimania.com/fdinh/atari/fontes.zip

There are 3 font families, Charcoal (a bit special), Arial and Verdana. If any problem occurs, please let me know (e-mail work best)...

I'm sorry, currently my pages are only in french.

You may also been interested in some (uh... 15!) realaudio files to try D. Mequignon's smashing Aniplayer.

http://www.multimania.com/fdinh/atari/real.htm

Bye!

Again, all the following is AIUI, which may be wrong.

The point is that all of the other telcos are basically getting a
subsidised ride, in that they don't have to pay the full cost of getting to
your door (unless they actually put their own wiring in, as with cable):
they pay BT part of the call money. All well and good in from one
viewpoint, as BT don't carry the traffic all the way.

However, in order to kick start "competition" in phone provision, when BT
was privatised they were *forced* to offer network connections to other
telcos at preferential rates, rather than charging customers extra for
connecting to their networks, ie from a BT phone you pay the same
connecting to someone else's cable phone as you do to another BT phone.
Contrast mobile pricing WRT connecting to phones on the same network or
phones on a different one, or for that matter cable phones which offer free
local calls to other cable phones (but not to BT phones).

So if you connect to another network from BT you pay the same as BT to BT
because they aren't allowed to charge a premium, but not vice versa: the
cable companies in some circumstances charge a premium to connect the other

way, as in the above example.

It's because of this anomaly that the free ISPs can do their thing. Note that they are generally run by other network providers: eg Energis runs Freeserve to all intents and purposes, Dixons just do the marketing. If BT were allowed to do what they can do (ie charge extra - or even just a fair rate - for connecting to another network), the free bit wouldn't be viable. They'd have to make their minds up between charging customers for access in order to pay BT to keep phone costs the same as BT to BT calls (as with traditional ISPs), or BT would put up the cost of the calls to connect to their network (effectively making them a kind of premium rate).

Putting it another way: the free ISPs only have enough profits to make it viable because they get a cheap connection to BT's network so people can actually connect to them without paying more for the call. BT swallows the extra costs.

In Demon's case they pay Energis for one of the networks, so we pay Demon. Then Energis pay BT at a reduced rate. Ever wondered why the new Demon networks (ROMPs in Demonspeak) are being put in, run by Scottish Telecom, ie Demon's new owner? Cutting out the middle man...

As I said at the start, this is all AIUI. Certainly the minutiae are possibly wrong, but I'm pretty sure about the principle. BT is not allowed to operate in the same way as the other telcos due to legacy legislation/regulations put in place to make it easy for other phone providers to set up shop. Now these other networks are taking advantage of that preferential treatment by setting up the free ISPs. It's a loophole, basically, and BT are trying to get it closed.

Alf,

While dpj@delphi.com was eating a Jam Butty.....
>>Why do you call this an Atari publication.
>>
>>Because it is. Does it require that _every_ bit of information within
>>to be Atari-specific? Of course not.

>No but it does require that the majority is surely. Couple of points
>here. I wasn't intending to be nasty although I can imagine it was not
>what you wanted to see. I downloaded and read it and was disappointed
>"considering the title". you have to take the bad feedback with the
>good.

t would be nice that in a perfect world, we'd all be using Atari hardware and there would be a plethora of Atari-related topics to relate to our readers week after week. Sadly, I don't see Atarians in this type of a situation. I appreciate your clarifying your intentions. It's not easily discernible reading the printed word. Like I said earlier, I have no problem taking the bad with the good; I expect a little of both.

>I was trying to say that a publication dealing with Atari, PC and
>Consoles that is so named would be expected to contain a majority of
>Atari material as apposed to minority. What rubbed salt into the
>wounds was the headed Atari sections also having PC content.

See above. There may be weeks when we'll have more, or less, Atari news than you saw this week. We're striving toward having Atari be the majority component of A-ONE. Like you said, you gotta take the "bad" with the good. <g>

>My apologies. I naturally assume that if they are on line to download
>your publication then they can use usenet. I should know better and do
>concede that not everyone will or want to use usenet. For them a
>round-up of the more interesting threads will be a good Atari read.
>however for the majority of your intended audience it will be old
>news.

Online means a number of sources - the internet only being one of them. I disagree with you regarding the majority of our intended audience seeing old news. _I_ check out the newsgroups almost every day but I don't check out _every_ message. I appreciate the fact that Joe does. The unfortunate part of the newsgroups is that threads break apart and there's also a lot of garbage strewn in with the good stuff. The fact that we're piecing together some of the good, to me, is beneficial.

>>Well, I'm not in the UK. <grin> Are you saying a daily newspaper

>I think you understand what I was trying to get across? <G>

I understand perfectly, but my point is still a valid one. And, I don't necessarily agree with that law in all instances. Another case in point is that we're offering a _free_ publication. The worst you could lose is some of your time and perhaps 2 minutes of online charges weekly. I find that inconsequential.

>Yes I would say that. there are laws that force that in this country
>and I am aware that other countries do not carry the same laws. but in
>all honesty would you not agree that it is a sound and sensible rule
>to follow.

I'd say you're in a minority. I don't agree with the law. It sounds like a law that can get too carried away to the point of being overbearing.

>Would you not also agree that anyone downloading an Atari publication
>would be expecting to see a good proportion aimed at Atari users?

I'd agree that the person should expect to see Atari-related news. Many of our readers have been following our stuff for many years and know what to expect. No one at A-ONE has ever stated or implied that the magazine would be solely Atari-specific. Even our press release stated what we'd be covering. We've always been upfront about it.

>I think we need to clarify that my point is. I was quite rightly
>expecting a majority Atari contet. not all Atari. But certainly not
>so little.

Like I said before....

We're working on more. We're also hoping that members of the Atari community are forthcoming with news and announcements. We're hoping that people like you will take an active role and possibly contribute to the magazine with reviews and other articles.

>Then I can only presume that you receive a lot more positive feedback
>than negative. I have no axe to grind and no war is starting. But you
>did advertise an Atari production in an Atari newsgroup and I felt I
>had good reason to respond with my feedback.

So far, yes. The feedback has been primarily positive so far. In the past 1 1/2 days, 9 out of 10 letters to me have been quite favorable. I haven't heard any feedback from other staff members yet. <g>

I welcome _all_ feedback. It helps us stay on our toes and not get complacent. It helps us to improve.

>All the Best with Jam on it :)

Thank you!

-Dana

4131. Re: new Ethernet card for TT030 !!! ;-)

Yes, I have thought about this, but it would be a _lot_ more expansive,
because I would have to design a completely new graphics card, since
the Tseng ET-4000 chip has been discontinued for many years.

This would mean, contacting ATI or Matrox, getting developpers docs, etc.
Given how small the Atari market is, I don't think it is economically a
very good idea.....

then again, if I receive about 500 pre-orders, I could easily justify
the hardware prototyping costs.

Basically, the choice is in the users' hands: if they want better
hardware, they will _have_ to put their money where their mouth is.
If/when they do, I can start working on it. It's not difficult, but
it takes a lot of efforts which I am not willing to invest unless
there is good money involved.

From: jfhaslam@zetnet.co.uk
Message-ID: <7bu0dd$q07$1@roch.zetnet.co.uk>
Source record: 83282

Hi All!

Has anyone got a full ANSI compatible Gem font (ie bitmap) that I can use in Connect? It needs to have all the IBM graphics characters, so that I can use PC BBSes in all their glory.

I've got a couple of fonts that are look-alike ANSI charcters, but these don't cover the graphics part of the font properly.

I know that this does exist, because I used to have one a couple of years ago, but since a hard disk crash, I lost a lot of files including this font. :(

Cheers!

James

Exactly. How many people will buy my card? Are there enough to justify the efforts in writing the VDI drivers (the hardware deisgn part is much easier than people would think - but programming those VDI drivers is a rather lenghty, unpleasant task)?

> The reason NOVA stopped production was not because demand fell, but
> because there are no more ISA graphic cards on the market.

Same problem for the ET-4000 chips.

I _could_ have acquired several VME cards designs for rather cheap, but since I cannot purchase ET-4000 chips anywhere, what's the point?

I beg to differ, Dennis!

T.U.S. Developments in the UK does a system called the IDEal. It uses the 2.5" IDE hard drives, as found in the Falcon and PC Notebooks.

To quote the blurb on an advert: "the entire hard drive fits inside the standard STe case and is extremely quiet in operation".

In their advert in the latest Atari Computing (inside front cover) they quote the Interface Only costs 59 ukp, with 170Mb 109 ukp, and with 340Mb 139 ukp. They do say they have other sizes too, but you have to contact them for that.

Contact details are: +44 (0)1625 503448 telephone,
http://www.tusdev.demon.co.uk for the Web, and
dave@tusdev.demon.co.uk for email.

Apparently this can be used with their Veloce accelerator, but whether this needs a recase (when used together, as the Veloce on its own doesn't) is not said.

Cheers!

Not so good :-(Personally I have always found Titan very good to
deal with.

>>Well Apex Intro (full version) is on the new Renegade CD available
>>right now from Atari Computing! :-)))
>
>Thats great! Did Titan or Doug Little give permission to include
>Apex Intro on the CD? And what version is it?

Full permission of course! In fact you can upgrade/buy the manual from
Titan. Version is 2.41.

>How do we US Atari folks buy the Renegade CD? Can you ship some of
>them over here to some of the Atari
>dealers for us to buy or do we have to order them from
>Atari Computing?

ATM you can order the CD direct from us for 15.95 (including
extra postage outside the UK).

We're looking into other ways of distributing the CD outside the UK
right now.

>>The CD also features full versions of Thing 1.09, Kandinsky 2.5,
>>Adresse, Edith Pro, Two-in-one etc etc! :-)))
>
>Super Cool! I've been waiting for a CD like this to come about. :)
>I hope there will be lots more Atari CDs to follow soon.
>Maybe I'll....ahem...

It's certainly an excellent value CD. Kandinsky 2.5 alone costs 30 ukp to
register, then you get full version of Thing 1.09 included and all the
rest. You even get ASCII and HTML versions of AC magazine, along with the
contents of all the Reader Disks and loads loads more.

>>I don't think Nemesis actually fixed it, more likely something got
>>knocked back/soldered into place! ;-)
>
>Maybe re-sitting a chip will help it out.

You never know.

>I got some Falcon diagrams that a nice fellow was kind enough

Games like this are usually found with old 520ST and 1040STs that are for
sale used. However I would check B&C computer visions.

http://www.mycomputer.com

or check Ben Hills adds that are in this NG from this month.
Don't know his WEB PAGE off hand.

Also there is a dealer in NEW JERSEY that may have this game.
I can't remember the URL but it had EVANGELOS in it.

Hope this is of some use.
Brian.

Well things are different in the UK. Regardless I am going to have to agree
with your opinions. However in CANADA we have been on a 15year push toward
privatization of everything. Bell Canada was a simple monopoly that was not
government controlled. However it had to answer to government controls and
was forced many times to give large rebates to all customers during years when
profits were to high. Essentially, local phone calls are FREE, however you pay
a few to have a phoneline and this fee is technically a local calls flat rate
fee. However, the monopoly has changed to an oligopoly as United States
phone companies have been allowed to compete under the FREE TRADE Agreement.

Bell had to sell/lease its longdistance phone lines to these companies.
Now we operate similar to the United States. Clearly our LONG DISTANCE charges
have drop easily 50%. However our LOCAL CHARGE to have a phone line has increase
by 300%. So unless you used ALOT of LONG DISTANCE you are taking a bath here.

I am on the BRANT FREENET. They are simply a provider that is NON PROFIT.
It provides the cheapest internet access available, (being an Atari User, I have
always been cheap).

I am allowed 1 hour of internet access per day during the period of
9AM to 12AM. However from 12 AM to 9 AM I have unlimited access.
If you stayed up all night you could have 10 hours per day.
The cost of this service is $60cdn per YEAR.
About $35US per YEAR.

The commercial providers have various limitations such as 20 to 30 hours
per MONTH to "Unlimited Access."

20Hours/month is usually $10./MONTH $120/Year
30Hours/month is usually $20./MONTH $240/Year
Unlimited $30-60Month $360-720Year.
These figures vary somewhat and some people will have better deals than others
but you can find Various IPs quoting these numbers. And some may provide
Cable access. Something I can't take advantage of with my ST/Falcon.

Since my IP is local I pay no phoneline expense while I am online.

Not certain why I write this, but I know that each country is different and
I think here in Canada, I have it pretty good:-).

Later Brian.

Hi Neil. I can understand where you are coming from but I have to
agree with Lous and Katharine. If its Intel or Mac hardware, even
though its running some form of MagiC, its not "Atari"... ;-)

This is a tricky area though. I've also heard people say that the
Hades, Medusa, and Milan are not "real" Atari machines either. I
disagree with them too, after all, these machines were designed with
the TOS market/users in mind, and thats the key element to me...

let me second that - I don't think I've ever seen anyone do a
tutorial series on how to get MiNT up and running on an Atari system -
maybe now it's about time to do so, and AC would be the perfect forum
for it. And Katherine certainly has shown she has the expertise and
knowledge to do such a series of tutorials.

Anyway, this comes from an occasional contributor to AC who
hopefully should have something to write about in the next issue -
maybe about how I recovered from my hard drive crash? :)

BTW, the cover of the latest AC is the handiwork of TAF's President
and my good friend Ken Macdonald - I must admit, it looks stunning :)

Hello Martin-Eric,

qf> Could you please detail the various extensions available that support
qf> long filenames, Unix attributes, etc. ?
Not really. Rockridge is in detail a secret to me too.

qf> I'm just curious, because I
qf> essentialy have no clue as to what's available out there, beyond the
qf> basic ISO-9660 specs.
Mac HFS is AFAIK just the Mac filesystem on CD. Joliet is, similar of VFAT
to
FAT, just a backwards compatible enhancement of ISO 9660 by Microsoft.

For UNIX attributes you have to use Rockridge I suppose. AFAIK this is
just
an ISO 9660 CD (with 8+3), having additional UNIX informations in
additional
files.

Long time ago, I searched the web about Rockridge, because I wanted to
write
a program to make these extensions on my own, but I found nothing usefull.

If somebody knows a proper URL with informations about the structure, I'm

still interested in it ... :-)

Greetings, Oliver

The DOS driver from CD-Tool (HS-ISO.DOS) supports up to 32 character long
filenames on ISO9660 CDs. Some Unix and Amiga CDs actually use this.

>...

>>>Under TOS it won't even work IIRC, so you need a separate DOS-

This is true, however HS-ISO.DOS (CD-Tool) supports audio CDs as a "virtual"
filesystem (surely not ISO9660). And the SPIN.DOS I previously mentioned
surely *exists*, it just hasn't been released yet.

> graphic card?

Hi,

This shouldn't be a major problem as fVDI is looking very good now and
it's free and it's already supporting the ATI RAGE 3D serie of GFX cards.
Writing new drivers for other cards wont be very difficult at all. To get a
basic version up and running on any GFX card would take about 2 days.
If you then want to add hardware acceleration spport (and you realy want
this, I can promise you), add a few weeks (supposing you have got the
required info).

OK, so this is basically just 9660 with some illegal filenames. Properly written drivers would probably reject these, but I guess Atari-drivers are liberal in this respect ;-)

> On a Atari the CD is 100% perfect. You probaly are going to give me another

It's not, I have only made one coaster so far and that was due to a bad disc (crappy Dysans).

> Well, the latest PC Games come on oversized CDs, so if your recorder isn't
> capable of overburning, "backing up" these is a no no.

I have never touched a PC-game in my life, and don't intend to either.

>>cost me more to buy a 4/24x SCSI CD-R, a new SCSI HD and CD-Recorder Pro
>>than getting that partly sponsored 450MHz PC...
> You don't need to buy a new CD writer since you got one already, so the

CD Recorder PRO does not support IDE-devices, so the 8100 won't work.

> BTW: a TEAC 55S is a 4/12x and is cheaper then a HP 8100.

Really? The TEAC is rather expensive here in Norway, where the 8100 was the cheapest thing around six months ago.

First of all, please disable that .vcf crap that ends up polluting your
message.

Then, take a look at the Quick FAQ to get started. It has pointers to
most of what you'll need to know, including how to attach a hard drive
and where to get software. By music, do you mean MIDI or MOD or audio
recording? What other stuff do you have (floppy, monitor, etc...) ?

This effect is typical for wrong terminator or cables. You have to get
everything right in this respect before you can try to use this drive.
Note that your cables have to be as short as possible and they have to
be of good quality.

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 03/08/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection is currently on-line! Unfortunately, there is no
list for this system (cartridge and CD based systems only).

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped! Includes box and manual]:
$ 4.00 Art & Film Director (Epyx) -- $4.30 shipping, due to
weight, counts as 1st item
$ 3.00 California Games (Epyx)
$ 3.00 Death Sword (Epyx)
$ 2.00 Devon Aire (Epyx)
$ 2.00 Dragon Scape (Free Spirit)
$ 2.00 Final Assault (Epyx)
$ 3.00 GFL Football (Gamestar)
$ 2.00 Lands of Havoc (Antic Software)
$ 2.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 3.00 Metro Cross (U.S. Gold / Epyx)
$ 3.00 Paint Pro (Abacus Software)
$ 2.00 Prime Time (First Row)
$ 3.00 Quadralien (Spinnaker)

$ 3.00 Renegade (Taito)
$ 3.00 Stunt Track Racer (Microplay)
$ 2.00 SwiftaR (Accustar)
$ 3.00 Techno Cop (U.S. Gold / Epyx)
$ 4.00 Warship (Strategic Simulations, Inc.)
$ 3.00 Winter Games (Epyx)
$ 3.00 World Games (Epyx)
$ 3.00 World Karate Championship (Epyx)

SPECIAL: Buy one (1) of each listed title and receive 10% off.

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.20 for the first game and $1.10 for each additional game. Shipping for hardware and accessories depends on the distance that the order must travel. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

There is no system security built in to the TOS ROMs, so it's pretty
easy to bypass any password boot up software.

That program is probably just an auto program or an accessory. You can
bypass these by pressing either ALT or CTRL while the system is booting.
ALT usually will boot the A drive, whereas CTRL will boot the C drive
and bypass any AUTOs or ACCs, depending on which HD driver you're using.
Once you're in there, just delete or rename the culprit.

4164. Some questions about atari demoscene!

Newsgroup: comp.sys.atari.st
Date: 1999-03-08 00:00:00 UTC
From: Michael Kargas <mkargas@hotmail.com>
Message-ID: <36E3A152.F8E59B8F@hotmail.com>
Source record: 83057

I am a CPC guy so I have seen demos from the CPC.
I saw also demos from the C64.
I am planning to see from SPECTRUM.

Beacuse I am mad with the demoscene I would like to see the demoscene from differrent machines.

I would like now from Atari st.

So I ask you:
1) Which are the most characteristic, the best the most important, the most state of the art demos on the atari st?

I want some characteristic examples of demos so that I can see how atari st demoscene is going and what effects can really achieve an atari st in the demos.

2) Tell me some emulators so that I can run these demos.
I want emulator that can run these demos.
If it is possible I would want a really fast emulator to run well or enough well in my 486.

If it is not just tell me the best emulators, even if they are slow and I will try them to a friend of mine.
But I want them to run the demos!

Thanks

Michael Kargas
P.S. What does this C64 (I was stunned!!!). Guess what could a Pentium do (What a lame Pentium 5 will do in the future with their lame software!!!)
P.S.2 After this I think that my 486 is too fast!!!

It might be a good idea to find a cheap second-hand CD-ROM (even an old 2x
would do), then install SPIN! and see for yourself what possibilities we
have on the Atari platform.

If you'll pardon my french, you're really starting to sound like an _EX_
Atari user, lately, Hallvard.... *grin*

The whole point with fVDI is that you *don't* have to write "your own fVDI",
but rather provide it with some very basic hardware-drivers. Titans new PCI-
based solution for Falcons use fVDI with an ATI Rage driver. This is not hype,
it's up and running.

> video-chip, while I'm at it I might just design a new computer to go

Actually, designing a custom video-chip is not that hard, unless you want top-
notch 3D-support.

> > You can also use the completely free fVDI Mach-driver (is it complete yet?)
> How can I use it, if it is not complete yet?

Live with the fact that some functionality is missing. It will be finished
though, don't worry.

Hey, I was just asking a question! Il Profesore managed to hook up a PCI-card
to a normal Falcon, so I guess it's not completely impossible.

Partially incorrect. The full version of Metados (as opposed to the
hacked version included with SPIN!) allows reading ISO-9660 at least.
Of what I remember from SPIN! docs, Julian specifically says that if
someone needs to access the CD from singleTOS as well, they should
use the full version, but if one uses MiNT or Magic (with the correct
XFS version) then one can use his mini-metados (which only provides
some basic BIOS hooks).

I wouldn't say that a driver is not properly written if it accepts the CD as it is. In my eyes, there's really no point in making the user's life much harder without a good reason. The CD *writing* software however should make clear that a standard is being violated before proceeding to create such a disk.

There are several extensions that can take you beyond ISO9660's limitations.
Some of them are:

- Rockridge -- gives you long filenames, POSIX file attributes, symlinks
(largely used in the UNIX scene)

- Mac extensions -- allow to store resource forks and some finder information
(type and creator)

- Joliet -- adds long filenames in UNICODE

All of these are supported (at least to some degree) in SPIN.

The MetaDOS and MetaXBS versions that are shipping with SPIN are by definition
not "hacked", as I am the official maintainer of MetaDOS. The SPIN archive
itself does not duplicate any files from the official MetaDOS archive, because
there's simply no reason to do that.

> Of what I remember from SPIN! docs, Julian specifically says that if

MetaXBS simply is MetaDOS without the ability to load DOS drivers. It's only
purpose is to load BOS drivers with minimal impact on the behaviour of MiNT
or MagiC.

Hi Jo. Thanks for the clarification. I'm currently using ICD's Pro
Utils, version 6.5.5. This works with the stipulations I mentioned.
You have to use a Minix partition of 64 megs or less, and it does
not support XHDI.

I just got HDDriver though, and as soon as my new 2 gig 2.5" IDE
drive gets here, I'm switching over... ;-)

Later!

->.

Everything Jo said, plus...let me recommend one single book that has made
the biggest difference in my understanding of MiNT/Unix/Linux...Its "Unix
Unleashed: System Administrator's Edition". It cost me $59.95, and it was
worth every nickle. "Unix For Dummies" was okay, just not enough detail.
Unix unleashed includes a CD with a lot of the latest Unix software, as
well. (it includes the Internet Edition in electronic form as well). Have
fun! ;-)

PS Too bad the CD doesn't include
Atari software! ;-)

4178. Atari compatible SCSI drives

Newsgroup: comp.sys.atari.st
Date: 1999-03-08 00:00:00 UTC
From: Dennis Vermeire <dennis.vermeire@ping.be>
Message-ID: <920914852-766529AEicMi@ping.be>
Source record: 83071

To prevent Jos getting slowly mad and having nightmares about SCSI drives
that don't wanna boot, it might be a good idea if all of us drop a
posting, giving details about the drive(s) we use or have had a bad
experience with.
This way, after a while we'll have a big list and know what drives
work on a Atari, and even more important, what drives to avoid.

I'll start with the several drives I used.....

Quantum 540Mb Lightning YES Bootable
Quantum 730Mb Lightning YES Bootable
Quantum 1.2Gb Fireball YES NOT Bootable
Quantum 2.2Gb Atlas 1 YES Bootable

Seagate 4.5Gb Medialist Pro YES Bootable

Fijutsi 340Mb CPDAC YES Bootable
Fijutsi 2.5Mb MTAS NO --------

Syquest 135Mb EZ Dive YES Bootable

Nomai 540Mb YES NOT Bootable

Cheers from Belgium

Dennis

I'm beginning to have the feeling that this fVDI is a MiNT application ?

If so, this means I'm stuck to ONE OS, and don't have a choice anymore.
Who will be satisfied with a graphic card with a driver that doesn't
work in TOS, MagiC, Geneva ......
Can someone assure me, and tell me that I'm wrong?

Dennis

PCs can't read HFS, atleast not straight out of the box. There's also the
Mac-extension to ISO9660 that adds resource-forks, I have never used this and I
don't know if this format can be read by PCs. Spin can, as Julian pointed out.

> The main thing ofcourse is that the CD can be read on any platform, and
> the files can then be transferred across these platforms without any
> problems.

The annoying bit here is that while your Atari can read all these formats, the two
most wide-spread and supposedly "modern" platforms you want to use can only read
their own ;-) Your Mac definitely works best with HFS-disks, PCs would prefer Joliet
but neither can read each others format... So stick with ISO9660 if you can live
with it.

Once MiNT is installed you wont noticed it. I'm using MiNT/N.AES since
quit some years now. So far maintaining the system consisted only of
adding now and then an update of the MiNT kernel into the auto folder and
editing the mint.cnf. That's all.

4186. Atari ST monitor

Newsgroup: comp.sys.atari.st
Date: 1999-03-08 00:00:00 UTC
From: Guaka <souren@sci.kun.nl>
Message-ID: <7c15phqpk1@wnnews.sci.kun.nl>
Source record: 83079

Hi, everyone!

I recently found an Atari ST on a dump somewhere, but it has no monitor.
So I wonder if there are any Dutch (or Belgian or German) people on this
group who have a monitor left, which they would like to sell for a small
price.
It also might be possible to exchange it for 2 half Atari ST's (without
diskdrive/power supply).
I live in Nijmegen, and my parents in Zuid-Limburg...

Greetz,
Kasper

Hi, nice idea! Here's my personal findings:

Conner 120Mb CP30104 YES Bootable

IBM 100Mb WDS-3100 YES Bootable
IBM 1.0Gb 0663 Unknown, maybe unknown
IBM 2.0Gb 0664-M1H NO. Unusable, drive is differential SCSI

Quantum 850Mb Trailblazer YES Bootable

Syquest 44Mb Removable YES Bootable

Next please?

Dennis, don't go all that negative please.

fVDI is a FREE VDI replacement, being worked on by I gathered a Swedish
crew. Contact Johan Klockars about it. I forgot whether I fetched it from
his own page or from ftp rand.thn.htu.se
It's not finished yet, I ran a previous (I think) version on TOS and on
MagiC. The TOS did a nice job, the MagiC combo had a few drawing probs,
both in TT med rez and on my card. This was some months ago, I don't know
what the exact state is now, but they've come up with improvements.

Hi, Katherine!

If you would write a short series of articles called "The Super Easy, Simple Way To Install and Configure MiNT For Internet Access Using The Mint98 CD That Refuses To Work Properly On The Atari/C-Lab Falcon" (or some variant thereof), you would discover a large and rapt audience paying close attention. I have no doubt that editor Joe Connor would publish your work.

A recent article (well, back in issue 7 I think) about installing icons in drop-down menus using a RCS trick was still getting positive comments in issue 11, IIRC.

4196. Sunday blackout

Newsgroup: comp.sys.atari.st
Date: 1999-03-08 00:00:00 UTC
From: jlog@zetnet.co.uk
Message-ID: <7c1kmv$j26$1@irk.zetnet.co.uk>
Source record: 83089

Not too much alcohol on Saturday, just that for three weekends in a row I have not been able to download anything from this newsgroup via zetnet. I have some posts from 6th March, nothing from the 7th and a few from today (8th). There were 136 apparently waiting tonight but most were of zero length and I maybe got 20 with something in them.

Checked the numbers in default, deleted the default and started again (but this simply re-downloads stuff I have already). I am becoming resigned to it. Don't post anything vital on weekends please :-)

John Logan

4197. STe IDE Interface is here in UK

Newsgroup: comp.sys.atari.st
Date: 1999-03-08 00:00:00 UTC
From: chrisc@zetnet.co.uk
Message-ID: <7c1mgpbih1@roch.zetnet.co.uk>
Source record: 83090

HI Folks...

Great news for all you STe owners out there....the fabulous STartIDE E
interface is finally here. This allows an internal installation of a 2.5"
hard-drive in an STe with a solderless install, comes with a copy of
TOS2.06 and full installation services are available.
Basic price of the board is 50 UKP, installation is 15 UKP including
cabling and a full install with a 60Mb HD (other sizes available) is 95 UKP
including return courier postage to any address in the UK.

Only from Abingdon Synthesis Projects......

BTW, yes this is the interface that Mario Becroft designed before any of
you mention it....I'm his UK agent....

See you all at Stafford on the 18th of April...

I don't know how serious your poll should be taken, if I visit your site and see that MagiC is a couple of votes ahead I usually throw in another two or three for MiNT ;-) Then there's MagiC-users which does exactly the same for MagiC (I know one)...

Chaos? One executable (MINT.PRG) and one configuration-file hardly classifies as "chaos"... MiNT is one thing, whatever else you run under it is a different matter.

If the Milan should have been MagiC-compatible right from the start it would have
been extremely expensive since all the old hardware must have been supported.
Writing hardware-drivers for MagiC is a lot cheaper, faster, simpler and more solid.

Source record: 83136

Martin Byttebier <tos4ever@ping.be> wrote:

>BTW: The MiNT '98 distribution CD contains an easy-to-use installation
>packet.

I don't care what the status of MiNT is, but if I have to fork out 199DM,
I call it commercial software, when using a commercial packet I expect it
to install by means of a couple of mouseclicks... it is called MiNT '98
and not "MiNT previous century". I also want a decent manual and a ongoing
support. Is that to much to ask for? Am I spoiled by ASH products?

Once installed, I don't want to even notice it is there !! I just want to
go on doing the things I'm doing, without spending time maintaining the
system. We are talking about a OS here, this should run in the background
and let the user get on with it.

I announced working on the Ultimate CD collection, and said that if someone
would hold my hand produce a MiNT CD which contains all the relevant stuff
and if possible a easy setup. I've got lot of reactions from people who
would like such a CD, but not one MiNT user has offered any help

So what should I do? Go to the Belgian ftp site and download all the MiNT
related files. Where do I start? What progs are essential, where can I find
some good docs.Do I jump in the deep water with my eyes closed? Am I really
dumb, ignorant and full of crap ? or are more people struggling with this?

>Using the brains is something one doesn't do these days. Everything should
>be as easy as possible.
Sorry, I'll try to use them.
Using my brain I noticed that MagiC 6.1 will have pfork{ compatibility, so in
theory MagiC users will have access to the same apps as MiNT users. My brain
tells me to wait just one more month, get the update and forget about MiNT.
MagiC, does install with a couple of mouseclicks, and in the worst case all
one has to do is edit one config file, which comes very well documented.
It has ongoing support by fulltime professionals, who after their hours
probably relax, to start the next day with a fresh head.

I think the coming months will be very amusing...
MagiC users are usally shut up by means of someone saying "can it do ICQ" or
"what about networks". I'm realy looking forward to the next excuse. It is
happening exactly like me and others said. MagiC is closing the gap, and soon
it will take the lead.
So using my brain, I conclude that I've already got the better OS, I'm very
happy with it, notice that its getting better and features being added with
every new updated which are documented and used by several programmers...
Some people will probably shout "it's not stable on my Hades" or "MiNT/NAES

runs smoother on the Milan", well follow some of the other threads, these are not "real Atari's" and in time they will get supported also, its like you said "Rome isn't build in one day"

So why try MiNT ? well as a Atarian, I like to try out everything, how can I comment on something If I never used it myself?
So, I'm still waiting for someone to direct me into the chaos. What should I do? What files do I need? Do I need tranquilizers? Do I need a new brain?

Cheers from Belgium

Dennis

> and DTP stuff. Is MINT basically for programmers? What is the
> advantage?

The advantage: Plenty of free, up-to-date, powerfull stuff available. It's a unix-derivate, hence very flexible, configurable and powerful in the hands of a skilled user.

The disadvantage: A novice or careless user can make a mess of things, even more so than with other TOS-compatibles since everything is configurable and in the hands of the user.

If you're happy with your current internet-apps there is no reason for you to switch from Geneva, since Geneva too runs normal apps very well. It's the best choice for music apps which tends to be rather nasty hacks, neither MiNT nor MagiC handles these well (with the exception of newer apps (like the SoftJee stuff) which is written with these in mind).

If you decide to try MiNT then start with the most basic things, download MiNT itself and get the feel of it. Have a look at http://atari.nvg.org/n.aes/ to check out N.AES a bit, and take small steps. Too many people have jumped right onto KGMD and cried out "MiNT sucks!" when they don't understand every single bit of it withit the first day or two. Heck, I've been using KGMD (well, it *was* KGMD, not it's more JESMD...) for years and there's still large parts of it I don't fully understand.

Message-ID: <19990307211425.26708.00002239@ngol04.aol.com>
Source record: 83139

Hi all,

I am trying to load the TAF distribution of MiNT X-Windows ect.., I have followed the instructions in the Install.TXT. MiNT boots, X-Windows starts and I can use the mouse but when I have a program open ie. tcsh or telnet I see a cursor but pressing keys on the keybpard does nothing. I hear the click from the speaker but nothing shows up on the screen. I must have missed something but I have no idea what.

The machine that I am installing this on is a STacy2 (upgraded to 4 Meg), TOS 1.04, and the original 20 Meg hard drive(I am currenty bidding on a larger one on e-bay).

The reason I am doing this is that I want to teach myself UNIX. So if you guys could also point me toward other sources of info it would be appriciated.

Thanks
Stephen Davis

p.s. my physical location is northern BC, Canada.

Overburning is a gimmick, and unless you use very good CDR media a lot of
CD ROM drives will not be able to read the extra minutes. But it was You
who said that "backing up" was no problem at all with the 8100.
Well, the latest PC Games come on oversized CDs, so if your recorder isn't
capable of overburning, "backing up" these is a no no.

>I really don't have to defend myself for having a PC, atleast as long as I'm
>using my Falcon 95% of the time. But there are things my Falcon just can't
>do as well or cheap as my PC.
No, you don't have to defend yourself, but the minute someone tells me he/she
can do a certain task better on a PC, I get on my high horse.
I'm not blind, I know that there are tasks which simply can't be done on our
Atari, but if a certain task can be done and even better...well.
The Falcon is perfectly capable of writing every kind of CD you wish

>I'm sure the expensive SCSI CD-R is a nice piece of hardware, but it would
>cost me more to buy a 4/24x SCSI CD-R, a new SCSI HD and CD-Recorder Pro
>than getting that partly sponsored 450MHz PC...
You don't need to buy a new CD writer since you got one already, so the
investment is simple the software. Just suppose you start from scratch, then
the Falcon would also come out at the cheapest option. Not every one is so
lucky to have a partly sponsored computer.
BTW: a TEAC 55S is a 4/12x and is cheaper then a HP 8100.

> "backing up" certain CD's has nothing to with the hardware. I can make

>
>Really? What software do you use?
You know perfectly well what I am using.....
CD RECORDER PRO from SoundPool, although they don't advertise these
functions/features the packet can "backup" whatever You throw at it...
The packet consists of three apps : CD Recorder, CD Audio and CD Copy. With
the Recorder or Copy app I can backup ANYTHING.

>Can you explain exactly what this "atari format" is? Is it a FAT-image? If
>so,
>then it's not readable on anything else. Also, you still need a special
>filesystem-driver for it.
I'll try:
When creating a CD with CD Recorder Pro one has several options to choose from : the usual ISO9660 and variants, DOS, SCSI COPY, DON'T CARE and ATARI. Before burning a CD, the program checks if the files comply to the selected option. So, supposing I select plain ISO, a folder called TEST.1_0 would be rejected and I would have to rename it.
The Atari option lets me burn a CD without complaining, the only option I have to set is if 8 or more nested folders are allowed. The burned CD will contain files and folders which do not comply to the ISO9660 standard, but, -and this is important!!- will be read by ANY CD ROM connected to a Atari, running METADOS with the normal supplied DOS and BOS drivers.
I don't know if such a CD can be read by a MAC or PC, and frankly I don't care about that much either. If I have to burn a CD that has to work on a PC or Mac I'll burn it setting the appropriate settings.
On a Atari the CD is 100% perfect. You probaly are going to give me another lesson about DOS and BOS drivers, but this doesn't interest me at all, it works and that's good enough for me... Why it works is something I don't even want to know. Do you have to know the inner workings of a engine before you can drive a car?

You wanna call me ignorant? go ahead....I can take it -))

Cheers from Belgium

Dennis

PS : why don't you download the demo version from CD Recorder Pro and have a look yourself : http://www.soundpool.de

Hello,
1) It is impossible to vote twice unless you wait two weeks in between. If
there is some way around this, I would hope that Atari users are more honest
then that. If this really is the case I guess I will have to switch polls.
2) At special request I believe I can get a Log of everyone who voted, I
guess I'll have to do this and weed out the cheaters :)

When people sell a monitor is it nearly always with computer.
Those Atari b/w monitors seem to have a shorter life then the Atari
computers themselves.

Commercial there are some dealers selling them.

I second this. Practising Mint98 myself I can think of a possibility
to produce a real good manual that together with Mint98 can call into
existence a foolproof installation that will compare positive with
the Magic setup.
Mint has the potential, I am sure of. For Linux they managed also to
put together an installation that many users are able to bring to a
succesfull installation.

When I manage to get the MintNet going I will at least put things in
text to help others.

>your probs.
>

Well, Bernd found out about my story in this group.
He is not happy. But so am I.

I am not the only one as I just found out.
Somebody else is doing the same also on a clean TT.
But kept quiet about it.

And someone wanted a manual for MiNTNet on a C-Lab Falcon. Also
sounded like having problems.

I really did trust that I would setup my MiNTNet in a wiff...
But it went different as everyone could read.

I will go so far as putting a bigger harddisk in the TT to get enough
space for the BIG implementation to succeed.

When I have concrete questions I will e-mail Axel from AG. He sells
it.

4219. MiNt log making

Newsgroup: comp.sys.atari.st
Date: 1999-03-09 00:00:00 UTC
From: atarist@xs4all.nl
Message-ID: <7c33r7rgr7@news2.xs4all.nl>
Source record: 82899

Maybe it is somewhere in the manuals, but maybe not.

During boot MiNT spews messages to the screen.
Goes on with sh doing scripts.
More messages.

I want all that in a log-file so I can see afterwards what happened.

I tried with AutoMore
And all output of auto-folder programs I can get in a log-file.
But not the MiNT messages. What makes him/her special?

I am sure these messages are not produced for fun or giving an
interesting look.

Is there any MiNT-adapt that knows a solution?

Again Gigahertz (GHz). It looks like we'll be having GHz processors any
time soon, I think the DEC Alpha might already be there actually. The
80x86 is reaching the limits of its architecture.

Incidentally, you have just rediscovered a widespread theoreme in usage
in the computer science world. I can't remember the exact name of that
theoreme, but it substancially says that computer power/capacity doubles
every 2 years, which is basically what you have demonstrated.

The only problem being that Motorola never developped a 128MHz successor
of the 68K... I don't know how fast the ColdFire actually runs...

Have You considered the fact that there is such a thing like a language
barrier? I understand German very good, but putting it in writing is a
complete different ball game. This reminds me about the discussion last
month, about the German MagiC docs...

I think my problems will be solved anyway by ASH -), apperently there is
a whole lot in the pipeline so I'll just hold on a bit and will connect
the TT to the internet/TV cable the ASH way...-)

Someone, mailed me today, and told me he would "love" the have the
MiNT'98 CD, well I'm gonna give this thing one more go, and if it is a
nono, that certain someone can mail me back and have the *****CD for free.
This business is bad for my nerves (not to mention my brain according to
a certain brainspecialist)

Cheers from Belgium

Dennis

Jo Even Skarstein <joska@nuts.edu> wrote:

>That's funny to hear from an ASH-fan ;-)
>When was the last time you got a free MagiC-update?
Every registered ASH user has access to the MAUS BOX from ASH and by simply asking for "a freishaltung" has access to the latest updates. Small updates always are free, major updates have to be paid for and can only be obtained the normal way.
BTW: people who always are knocking IConnect & CAB.OVL, should have a look in the MAUS BOX, these two have improved a whole since the last update.

The Maus BOX is something like a BBS, so it takes a international call, I know these are not cheap, but downloading a average program doesn't take hours, normally you can log out in less then 10 minutes.
This is not ideal, I know, but its better then nothing (eg.MiNT 98)

IMHO Papyrus(R.O.M) has the best update arrangement, whenever there is a update, they send it automatically to ones emailadress.They are the only one AFAIK that offer this service to their users/clients.

All this is only good for people who are connected to the net...

If anyone is interested in getting the latest updates from ASH via the MAUSE BOX => +49 6221 130 36 71, use Zmodem protocol, for fastest download times

Cheers from Belgium

Dennis

>Otherwise you could have downloaded pretty much the same thing for free..
I suppose this is ment as some kind of a joke ?

I have asked several times very polite, where I can get the files I need
and what exactly I need to download.
All the aswers I've got here have been smart remarks or of topic replies.

I for one, don't care anymore, but has it occured to all the gurus in this
group, that others wanting the same thing might be reading this thread and
are getting just a tiny bit confused? -)

This afternoon, I'm gonna give it a last and final try, if it's a nono, the
spare TT goes back in his box, and I'm gonna spend my time doing some more
productive things on the Atari.

A summary of this thread: If you are lucky enough to have acces to cablemodem
and you want to access the net with a "real" Atari, You need a ethernetcard
and the software to drive it. The only OS with network drivers is MiNT.
Get the MiNT 98 CD and install, if you have problems, don't ask for help in
this newsgroup, that's just a waste of time, If you know German ask for help
in the German newsgroups, the author will comment on your reactions, do not
send him personal mail, that's a waste of time also, you'll never get a
reply.
Last hope : find a ftp site and start downloading all MiNT network related
files, unzip, unzoo, untar, unlzh to ones hearts delight and once you've
accumulated over 15Mb crap, do the sensible thing, partition the drive...
If after all this you still have a brain, pack it in, and wait a couple more
months.... ASH is working on it

Cheers from Belgium

Dennis

Actually Netscape is only a web browser/mail/newsreader. All the TCP/IP and dialing functions are now embedded in the winblows. In the days of Win 3.11, you needed to add winsock software to add that functionality.

On an Atari running TOS, all you need is STinG (the TCP/IP and dialer software) and a client like CAB and Newsie. If you are running MiNT, then the MiNTNet extensions have all the networking stuff. Then you add the client of your choice.

The problem with integrated software like Netscape is that if it includes a crappy newsreader or mailer, and you want to use the mail client of your choice, you will still be loading the crappy one included in Netscape while you're browsing the web.

On PCs with virtual ram and stuff, this may not be such of a problem, but on our limited resource machines, you can't afford to load software that you're not using. The result is actually more efficiency: you have the choice of the mail/newsreader and web browser that YOU want to use, without taking up useful resources with stuff you don't need.

The other reason for this is that an integrated architecture is easy for a large company like Microflop or Netscrape to develop, but on the Atari platform we have several lone programmers each concentrating on their own client, doing the best they can, most of the time for free.

If you want one single software package, get CAB2.7 with Fiffi and ASH Mail, and you're set. Or wait (yet again) for WenSuite.

I guess it's possible to run NFS on the NT-server and mount NT-volumes on the Falcon that way, but Samba provides only the server-side of SMB so it won't be useful to this guy. He can ofcourse run Samba on his Falcon and share the Falcon's disks with the NT-server.

Nick said where you're wrong here... :-)

But, let's move up the bus speed: you get problems, big problems.

Increasing the clock is not too bad, but the whole bus is different stuff.
The whole motherboard has to be redesigned, with technology that
suppresses radiation/interference. Won't come cheap. This goes for most of
the regular components as well: I wonder how regular chips/components
would cope with very high frequency switching levels. I bet you won't be
able to get a box for 700 USD...

Ronald, it doesn't! I figure people have read this NG before, and a similar thread has been going on some time ago, remember? That one was about KGMD, but nevertheless...

>Shall we start a tread about our questions?
>Or exchange info and help by e-mail? I really do not want to give
>people a bad impression of the product and all related even
>inadvertendly.

You don't give people an impression that it's a bad product. It's some people that want to read/translate it that way. Who cares?

I figure several people have been trying, not writing about it in here because there are always others telling them they are stupid/dumb/whatever. Better forget it, they must have thought.

NOPE! Mint has potential, and it would be a waste when people just give up on the first try. Therefore, I suggest everyone writes about their own experiences in here, so others can read it, comment positively on it and thus help each other. If you stick to e-mail, a third person never gets to know what another one tells you and may be a solution.

And I don't know another group where one might go to discuss this. The Mintlist is for the cracks, I got the impression. Perfect, but I feel they wouldn't like all beginners stuffing the area with their problems and having to fetch all those messages too. Wouldn't blame them either.

So, stay here, I'm sure others will benefit from it and in the end maybe the result is an installation manifest that works for all.

Just my two Eurocents... (ARE these called cents, btw?)

The Atari will boot from any drive that doesn't require initiator
identification like the Quantum Fireball does. There is nothing more to
it.

> Nomai 540Mb YES NOT Bootable

This is wrong. You can boot from any removable media drive as long as
the media don't have more than 512 physical bytes per sector. The Nomai
drives have 512 physical bytes per sector, i. e. they are bootable..

> Anyway, an interesting look at a humorous trend that Atari might have
> taken, which turned into a eye opener of how far we could go. ;)

You still can...

The easiest way to ride the wave of faster processors is MagiC. I've seen GEMBench results of MagiCMac running on a 233 MHz G3, showing a 5800% increase in CPU speed compared to a standard TT. I don't know if this figure (58 times the CPU speed) is entirely accurate or not, perhaps exaggerated because of the G3's 10ns RAM, but it's very fast nonetheless.

And remember, too, that there are so-called 'Ataris' in use right now running, for instance, MiNT on '060-based machines; and that such TOS variants don't have the overhead incurred by other OSes, so they run much more efficiently than, let's say, the 15,000,000 lines of code that Win98 uses (no exaggeration here).

The point I'm making is that processor technology didn't die alongside Atari Corp.

MiNT sets up it's own devices which automore luckily doesn't know anything about. If it did, everything outputted to the console under MiNT would be swallowed by automore...

> I am sure these messages are not produced for fun or giving an
> interesting look.

Don't be so sure about that ;-)

> Is there any MiNT-adapt that knows a solution?

One solution is to pause/restart the output with control+S/control+Q, but that's not exactly what you want (but perhaps what you *need*?).

I have never tried this myself, but you could try to set the console-device ("CON=" in mint.cfg) to a another device or file. E.g. "CON=u:\a\bootmsg.txt". Try it with an empty floppy first (always A Good Idea regardless of OS or whatever you're testing ;-) 'cause I have no idea if this will work.

Beware that this is a temporarely solution (if it works), and should only be used for debugging.

The latest MagiC-version can capture the boot-sequence to a file (similar to automore), this was suggested implemented in MiNT as well but I don't think it was accepted. One major problem with this is "when to stop" ;-) Under MagiC it's very simple, because MagiC always runs a number of autofolder-programs and then ends up starting it's AES and then it's time to stop logging. A similar approach would also work under MiNT, but it wouldn't be particulary useful since most of the interesting stuff is outputted *after* MiNT has started INIT or GEM (MiNT's equivalent to MagiC starting it's AES)... Almost everything is set up by INIT running a number of scripts (/etc/rc.boot, /etc/rc....), this is out of control of the kernel hence impossible for it to log.

What you could do is to modify /etc/rc.boot and /etc/rc to copy all of it's output to a log-file using tee, this requires some knowledge in shell-programming. Life is tough sometimes, but what you're asking for is actually more complicated than it sounds.

If you want to pursuit this please mail me and I'll help you out the best I can. It would be interesting to get it working, as it would be *very* helpful

when debugging other people's problems.

Hi there,

I had the same problem,and I solved it by deleting a lot of rubbish that had
accumulated on the partition that all your mail and n/g messages go.Thus
making room for the new stuff.
Also, a defrag might help a bit as well.

Hope this helps,

All the best,
Keith & Laura

Netscape is available in a standalone version (i.e. no mailer or
newsreader). I have it installed here (v4.08 for Mac). But CAB is still
much more effecient :-)

Hi Ronald. (this seems odd, my first name is Ronald too!). Anyways, you can
edit SYSLOG.CONF in /etc, look for lines that direct output to /dev/console.

You can change those lines from going to /dev/console to any log file you
want. However, its probably better if you just make it go to a log file in
-addition- to your screen. (/dev/console is your screen). Are you using
Peter Stehliks excellant TosWin 2.3? It will output everything to a TOS
window that is highly configurable. Even those pesky .TTP apps.

Here is part of my SYSLOG.CONF file:

Note that # precedes normal comments, I'll use +++ for comments I'm
adding from this message!

#
# syslog configuration file.

<snip>

# if a non-loghost machine chooses to have such messages
# sent to the loghost machine, un-comment out the following line.
```

```
#
+++ LOOK AT THE DOUBLE LINE BELOW. I ADDED THE 1ST LINE TO MAKE IT
+++ APPEAR ON MY SCREEN (TOSWIN WINDOW "console")
auth.notice /dev/console
auth.notice /var/log/authlog

mail.debug /var/log/syslog

# following line for compatibility with old sendmails. they will send
# messages with no facility code, which will be turned into "user" messages
# by the local syslog daemon. only the "loghost" machine needs the following
# line, to cause these old sendmail log messages to be logged in the
# mail syslog file.
#
+++ SAME THING HERE...
user.alert /dev/console
user.alert /var/log/syslog
#
#
# non-loghost machines will use the following lines to cause "user"
# log messages to be logged locally.
#
+++ AND HERE...
user.err /dev/console
user.err /var/adm/messages
user.alert `root, operator'
user.emerg *
#
# This is for ppp
#
+++ HERE, I DID NOT WANT IT TO GO TO MY SCREEN (TOO LONG!) SO I
+++ COMMENTED OUT THE 1ST LINE, AND USED THE SECOND TO DIRECT OUPUT
+++ TO THE FILE PPP-LOG WHERE I CAN READ IT WHEN I WANT.
#*.info /dev/console
*.info /var/log/ppp-log

I hope this helps somewhat... :-)

I've tried NFS on the PC & ST. It works, but the PC servers/clients are
expensive to buy. Plus, many seem to want authentication from the ST server,
which (AFAIK) does not exist.

If you have a MiNTnet setup, its easier to run a NFS server on the PC & get
access to the PC's files.

I would like to try Samba on the ST ,where are the docs/files for the MiNTnet
version?

> And all output of auto-folder programs I can get in a log-file.
> But not the MiNT messages. What makes him/her special?

Beeing the kernal makes it special. MiNT uses its own output routins
without using the TOS trap interface and so an IO redirection of an
external program can't work for it.

> I am sure these messages are not produced for fun or giving an
> interesting look.
>
> Is there any MiNT-adapt that knows a solution?

I have only two ideas to improve:

1. If you are using version 1.15.1-beta 6 or higher you can insert the
option command "set -q" which turns off informations and only shows
real warnings/errors.

2. Write a short script containing the line "sleep 10" and execute it
from several places in mint.cnf. This gives you the chance to read
the actual screen output for 10 seconds.

I think MiNT should have at least an option to wait for a keypress after
an error or warning like "set -d" and/or a new keyword like
"LOGFILE=xyz".
I will see if that can be included in the next time.

Hope it helps,
Ralph

> which (AFAIK) does not exist.

Partly true:
1. There is a cheap nfs-server for Windows(3.11/95/98/NT): Search for
"Tropic NFS"
this is Shareware from the USA and works perfectly well with the
latest release
of the MiNTnet NFS-Client (costs about 20$).
2. If you need a pcnfsd (when a nfs-client from the pc wants to connect
to the ST)
you could run pcnfsd, there is a (rather old) port available.
3. The better solution for accessing the hard-drive of you Atari is
Samba, which
is available for e.g. at ftp.funet.fi or ftp.uni-giessen.de

Greetings,
Bernd

No, I ment it seriously.

> I have asked several times very polite, where I can get the files I need
> and what exactly I need to download.

And IIRC you got answers, if you didn't then you can get one right now:

1. The MiNT kernel itself.
2. MiNTnet 1.03 (all freeware ethernet-card drivers included).
3. Whatever internet-clients you need.

All of this can be downloaded from ftp.funet.fi, and the docs for MiNTnet will tell you exactly whatever else you need for this and that. If you don't want to read the docs and think for yourself you can either...

a) don't bother, get a PC or Mac.
b) go ahead anyway and rant on c.s.a.s. when the MiNT doesn't read your mind and downloads/installs/configures everything automagically.
c) sit down and wait for somebody to add the necessary functionality to MagiC.

> All the aswers I've got here have been smart remarks or of topic replies.

Yep ;-)

> I for one, don't care anymore, but has it occured to all the gurus in this
> group, that others wanting the same thing might be reading this thread and
> are getting just a tiny bit confused? -)

Definitely. That's why RTFM-answers are most common.

> and you want to access the net with a "real" Atari, You need a ethernetcard
> and the software to drive it. The only OS with network drivers is MiNT.

That depends on which network-card you have, there are some ethernet-drivers for STiNG as well. Ofcourse, STiNG can be a bitch to install too... That's the downside of flexible software, the more options and choices the more complex configuration and installation. Unlike Apple or Microsoft we don't have 3000 professional programmers to conduct HCI-tests and write no-brainer wizards for everything.

> Get the MiNT 98 CD and install, if you have problems, don't ask for help in
> this newsgroup, that's just a waste of time, If you know German ask for help

How many in this newsgroup actually *have* this CD? I have never seen it myself, since I don't need any of it's commercial network-drivers (my card has a free

driver) or web-based configuration (I'm beginning to get familiar with the configuration-files).

> in the German newsgroups, the author will comment on your reactions, do not
> send him personal mail, that's a waste of time also, you'll never get a
> reply.

If this is the case then say so publicly, as you have paid for his support (he has said so himself on the MiNTlist). Anyway, the non-existing support from companies like ASH, Woller and Aixit is why I don't have any faith in the commercial Atari-market anymore.

> Last hope : find a ftp site and start downloading all MiNT network related
> files, unzip, unzoo, untar, unlzh to ones hearts delight and once you've
> accumulated over 15Mb crap, do the sensible thing, partition the drive...

Actually, the sensible thing is (again) to read the docs and download the stuff you actually *need*, but I guess you're tired of hearing this now.

Ahh, the international-call BBS which *always* hangs up on me during the negotiation-phase? The same applies to ComputerInsel's BBS, so I guess our modems can't talk to each-other at all.

> BTW: people who always are knocking IConnect & CAB.OVL, should have a look
> in the MAUS BOX, these two have improved a whole since the last update.

I find the latest version I have (bundled with CAB 2.7) rather good (except that it won't work with nullmodem-cable), but there's not much I can do with the available clients.

How does the updated version work in a LAN? Are there any plans for NFS (or even Appletalk)?

> IMHO Papyrus(R.O.M) has the best update arrangement, whenever there is a
> update, they send it automatically to ones emailadress.They are the only
> one AFAIK that offer this service to their users/clients.

Gribnif has always provided updates on their web-page, not only for bugfixes but also for entire new versions. E.g. if you ever bought Geneva 002 then just download the 007-update for free. Now *that's* support! A pity Geneva doesn't work that well with MiNT yet, if Dan Wilga made a MiNT-only version (something like N.AES) he would have an entire new userbase. And I would gladly pay for it again :-) (I never got the first one, Compo went bust after they cashed my cheque but before they shipped me Geneva...)

As reaction I give you this. I found this message in the Mause.

****

Kein Kundenservice mehr bei ASH.
Ich habe festgestellt, daï¿½ die Atariwelt so geldgeil geworden ist, daï¿½
Sie sogar Microsoft
ï¿½bertrifft.
Ich habe als Beispiel eine groï¿½e Update Aktion gestartet und mehrere
hunderte von Mark
bei ASH ausgegeben, wie zB. MagiC der teurer als Windows 98 und
unausgereifter. Ein paar Tage spï¿½ter, als groï¿½en Dankeschï¿½n, erhaltet
man bei ASH die erfreuliche Nachricht es gibt wieder ein neues Update
fï¿½r viel zu viel Geld natï¿½rlich.
Nicht verlegen auf ein Wortwechsel schreibe ich natï¿½rlich eine E Mail um
zu sehen ob es eine Kulanz gibt und .....nichts
Eine Zweite und .....ï¿½tsch, wieder nix.
Was lernt man davon.
Kulanz, kennen wir nicht!
E-Mails beantworten, wie geht das?
Aber das groï¿½e verarschen, daï¿½ kennen wir.

NO customers service at ASH.
I have found that the Atari world has become so fancy for money , that
it even outclass Microsoft.
Example: I decided to have a big Update action and ordered for several
hundred of German Marks updates at ASH (for instance MagiC which is so
expensive and unmature as Windows 98)
A few days later one received as big thank for the order a newsletter from
ASH announcing again a new Update for a lot of money naturally.

Not shy for a dispute I sended naturally a E-mail in order to
to see if I could count on some kindness of so.....Nothing
A second mail and .....ï¿½tsch (I found no translation for this), again
nothing.

Morality of the story
Kindness, sorry don't know that!
Answering an e-mail, how on earth must we do that?
but we do know how to lead someone up to the garden path.

I have an Atari 520ST with two disk drives and lots of software. It's been boxed up in my closet for years. Everything looks and works like new...it was used very little and only by adults. Is anyone interested in buying it? I could use the closet space, and will sell for a fair price.

4260. Voltage susceptable software - strange symptoms

Newsgroup: comp.sys.atari.st
Date: 1999-03-09 00:00:00 UTC
From: leaver@dynamite.com.au
Message-ID: <7c49shakg1@bomb.dynamite.com.au>
Source record: 82940

Just a follow-up in case anyone else has a similar problem.

A few weeks ago several people - Roger Cain in particular - helped me when my TT died owing to, as it turned out, to an over-voltage power supply.

The symptoms that I experienced before the TT died completely were very strange. Since they have now vanished I must assume that they were all caused by the psu.

Most of the symptoms were hard disk related. In particular, HD Driver v 7.61 had problems where v 7.00 did not. Magic 6 would not boot whereas Magic 5 would. Also in floppy disk writes bit 3 of the first byte in a file would be mysteriously set.

it would appear that with computers anything can cause anything.

Stichting ST <atarist@xs4all.nl> wrote;

>Hallo Dennis, got some inspiration from my 'one of these days' thread?
>Those are the questions that are in my mind also but I had them not
>in those straight words yet.

Not really, but I'll let you in to a secret... last month I bought the MiNT '98, and just like you I'm struggling with this ***** CD
Instead of asking for help in this group, I decided to try it myself, I suppose that not everyone who buys the CD has acces to the net, so those people have to solve/crack it by themselves also.

Where I live I have access to the cable and the networking under MiNT 98 is the only option for now. Well, I have all I need right now, except a working configuration. I used a spare TT and just like you I started from scratch. Every time I solve (or think I solved) a problem, another one pops up... I have now found out that my network card will not be able to work with cablemodem, but this is pure a hardware problem and has nothing to do really with MiNT.

Reading this newsgroup isn't very good for ones moral either. Reading several postings about how "easy" to set up all this is or should be, makes one wander. I've got nearly 20 years experience behind me, and I don't manage to crack/solve this, while other people just go on with it and do their thing. Sometimes "moral support" comes along in the form of another "poor lost soul" who is stuck. I remember Henk Robbers a couple of weeks ago, but what has happened, did he succeed, or did he decide to toss is all in?
Some offer help like saying "if you want to get to know MiNT, start with the basic installation, take time to learn the ins and outs of the OS and move slowly on". Nowhere on the MiNT '98 CD I can find a notion saying that it is only for advanced MiNT users. I don't want to get to know the system, I just want a connection to the cablemodem

I'm not giving up yet, but I can tell you that personally I don't think its worth all the trouble. I gues we're both lucky we've got a spare computer to try this OS on. Imagine, installing this monster on your only working computer.....

What I am going to do though when all this is finished, is to put up a "unbiased report" on my website. Reporting the pros and cons of the different OS. As it is not a magazine, it will contain my own personal views on the matter, and the way things are now, well, its going to be "red hot chili peppers...." I've started a logbook, noting the progres(?) I'm making, well let me tell you, with a bit of luck I'll get the Pullitzer price this year, this thing reads like a novel.....

In Holland there's a happy Dutchman (Jos), in Belgium there's someone who needs a new brain...

Cheers from Belgium

Dennis

Yes I did, and you are right its 150 DM, sorry, taking in account some telephonecalls asking when they would find time posting the CD and been put on hold for several minutes, and adding 15 DM for postage, it will probably add up to 199 DM in total -))

>Bernd Ebert is always ready to help registrated users.
He shouldn't be ready to help, he's obliged to help, we're not talking PD/shareware here. Instead of trying to give help or comment in newgroups, he should be very busy rewriting the setup procedures, and once done give them free to the users of his product, because his product clearly has flaws..

>Am I spoiled by ASH products?
>
>Yes indeed.
Now, that is the most original reply I read for some time. I think I'm gonna stick it on my monitor. Just to remind me what a lucky guy I am.

>>So what should I do? Go to the Belgian ftp site and download all the
>MiNT
>>related files. Where do I start?
>
>The Belgian ftp-site isn't the right place for MiNT stuff.
Sorry, once again... Its my brain going berzerk, what's the use of putting "wrong" MiNT products on the Belgian ftp-site and announcing they can be found there

>Do I need tranquilizers? Do I need a new brain?
>
>Find a new brain.
I will, the local Maxi-GB has some on offer, I'll go down there first thing tomorrow, install them and report back.
Let's hope they come with a ASH installation, if its the MiNT way, You are hereby invited to my funeral or drop by and visit me in the local asylum.

Cheers from Belgium

Dennis, the spoiled by ASH products user

4265. Re: Atari Online News, Etc. #0101

Newsgroup: comp.sys.atari.st
Date: 1999-03-09 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <tZ_E2.57$g92.357@198.235.216.4>
Source record: 83004

I was hoping for something BETTER than the old ST REPORT.

I know that you can do far better than this. I have seen your writings in the past in other media. Clearly what you have here is ONLINE NEWS that has some Atari Coverage which doesn't exist in a majority of other media.

If it is that difficult finding things to write about online for Atarians, then perhaps you could lessen the QUANTITY of ATARI ONLINE and INCREASE the QUALITY.

As for readers being interested in the other news. I don't think that is true because being able to read it everywhere else makes it a dogs breakfast in an Atari Online Publication.

I used to download ST report, but then it became of little value to me. Obviously you have alot of NON ATARI readers who are interested in NON ATARI subjects and you just happen to throw in some ATARI NEWS for them to quickly bypass.

Heres what I am looking for in ATARI ONLINE.

The Quality of Mags such as the defunct:

ST INFORMER
CURRENT NOTES

I know your capabilities and you clearly haven't lost your roots to the Atari World. But really, when you read the NEWSGROUP what 95% of the readers are looking for is HELP.

HELP FOR:

1)LOCATING ATARI COMPUTER DEALERS
2)LOCATING ATARI SOFTWARE
3)LOCATING SUPPLIES FOR ATARI EQUIPMENT
4)USING SOFTWARE
5)INSTALLING HARDWARE MODS
6)LOCATING AUTHORS OF PROGRAMS
7)KEEPING CURRENT IN HARDWARE/SOFTWARE UPDATES
8)LOCATING SOURCE CODES release to PUBLIC DOMAIN
9)INTERACTING BETWEEN PCs/MACS/ATARIS and maybe Amigas:-).
10)USING INSTALLING/UPDATING INTERNET SOFTWARE
11)NEW SOFTWARE RELEASES
12)HADES/MILAN USERS

The List is ENDLESS. There is still ALOT to talk about for ATARI if that is what you are interested in doing. Also there is an online alternative platform magazine that is looking for a TOS/ATARI Editor.

If you just want to be an ST REPORT that is fine, but it is not my interest.
If you would like to be a more ADVANCED Atari Magazine then that would be
EXCELLENT and I would then have it arrive in my email.

Thats my opinion.
And I would be curious to see if others in this NEWsgroup support it or if
I am wrong and they really like the look of AONE.

Brian.

Source record: 83006

Dennis Vermeire wrote:

> I remember Henk Robbers a couple
> of weeks ago, but what has happened, did he succeed, or did he decide to
> toss it all in?

Hallo Dennis.

I finally succeeded.
The problem was not MiNT, but the unpacking.
I was not familiar with unpacking.

First about the cable.
I am on a 2 way TV cable in Amsterdam.
I have atari since 1987.
Only last januari I decided to go on the net, but I foresaw problems on atari
because the ethernet connection.
Then I could buy a second hand wintel laptop with pcmcia W98 32M and CD.
And I bought. 2 boys from the cable were half an hour in my house and I
was mailing and browsing with netscape.
I treat my wintel as my TV, dont want to know what is in there.
I can devote my TT to the real work: programming.
And have a spare computer on which I can run a emulator.
I am typing this in my easy chair in the living room. ;-)

Back to the unpacking.
The final unpack step, untar of the mint sources, failed on the TT.
I went back to the laptop and succeeded using powerzip. :-) :-) :-)
in 10 minutes.

In 1987 I was 2 years out of computers for some reasons.
I was beginning to hate commandline operated systems.
But I missed the programming. I saw atari with its paperwhite screen and
graphic interface and instantly knew:
Thats the way how computers should look like!!!!
I promised myself never to type a commandline again.
And for existing filenames there was the FileSelector.
I was strengthened in this thought when I noticed that TTP programs
tend to loose vital information when scrolling. Even on that computer I
abandoned, this couldnt happen. Deep in the BIOS of that system such
behaviour was considered 'data loss' and output was suspended until you
hit a key.

So my second decision was: never to use a TOS or TTP program.
But I was forced to fail myself on that point, which I regretted very
strongly. ;-)

Today airplanes are 'fly by wire'.
What would happen if the pilot flew his machine by typing commands,
which is, in essence, a 40 year old technology.

Cu
Henk.

>Yup, and I have. It installed automatically. I have moved wdialog to before
>NVDI and then after NVDI. Makes no difference:-(.
Brian,
IIRC you are using TOS 1.0 ? If this is still the case, you've just found the
cullprit. NVDI needs at least TOS 1.02
The reason it works with MagiC, is because this OS takes over control and
NVDI is happy with it. If You want to run NVDI straight from TOS You'll need
to install a higher/newer version.....

Cheers from Belgium

Dennis

Have you considered the third option: Asking the author for help? You have bought a commercial, supported product, that's pretty stupid if you don't intend to use the support. Otherwise you could have downloaded pretty much the same thing for free...

Easiest thing to do is to visit an Apple Macintosh store, as this is a common cable needed to connect external modems to Macs.

Exactly my sentiments. Nima accepts major credit cards (expect to pay a
small surcharge of a couple of dollars), and will either email
you the driver or will allow you to download the software directly from his
web site.

You only need fax him with your order and credit card details, I commend
Nima's service as second to none.

It does - and is.

The good news is that if you've already prepared the motherboard for a
Nemesis then you've done most of the work already! Centek even provide a
replacement SMD resistor for one that had been removed (R216).

>>I dont think you can use a nemesis with a CT2 anyway.

Not yet. I have heard of a networking filesystem for STiNG and MagiC, but IIRC this is not compatible with NFS, SMB or any other widespread protocol. I hope I'm wrong though.

> to create a Drive on my Falcon that maps to the NT File server.

It's not possible, but you can do it the other way around by running MiNT and Samba on your Falcon ;-) What you need is a SMB-client for your Falcon, if somebody wants to port/write one then please go ahead, we need it.

Hi John,

These zero length mails from Zetnet were quite popular a few months ago
and there was some discussion about them in zetnet-atarians, but at
that time several of us had the same problem.

I have not had any of these problems over the weekend. Have you tried
changing from news.zetnet.co.uk to znews.zetnet co.uk or vice versa ?
(You may need to ask for an unfiltered server to do this, if you have the
filtered service at the moment.)

Cheers

Paul

Well, I for one can't simply boot off a floppy if I have a HD attached
without pressing CTRL or ALT. It will just default to the C drive.

If what you want is to create an ISO CD with Rockridge extensions, it would probably the easiest way to port one of the Linux applications capable of creating such a CD image...

Tseng Labs are not even involved in video hardware anymore.
The chips are discontinued and have no 3rd-party equivalent.

The ET-4000 and ET-6000 designs were sold to ATI, but all ATI did
was hack the technology and improve it, which created the Mach 64
series of video cards.

Unfortunately, the Mach 64 chip is _much_ different from the ET-4000,
which means that one could _not_ upgrade, say... a Crazydot design
to use a Mach 64 chip instead.

In the long run, I suppose a new card should be Mach 64 based (ATI
still manufactures variations on it - now nearing the 4th demention)
but then it would have to be designed from scratch.

***

In the long run, porting the Milan's PCI BIOS to TOS 3 and 4, to
access the Titan Eclipse on Falcon and Michael Schwingen's VME-PCI
adapter on M-STE/TT seems like the best approach.

It wouldn't be too difficult to adapt existing Mach 64 drivers to
access the PCI bus through these either.

Hi

I'm in need of a couple of good quality external SCSI cables (centronics style).

I'm a little low on cash at the moment, so can offer 20GBP's worth of Atari software/hardware, PD software or the first (this is what I am told) CD-ROM for the Atari.

We have some members in the Atari Users of North Texas that I know are interested in finding a Ethernet card, so I could publish this in AUNT BYTES.
Since I'm looking at possible becoming a TT user in the future, I would like to know the answer to two questions:

1) What price range do you think it will be?
2) What exactly would a ethernet card allow a TT to do?

Thanks,

Doctor Clu

PS: Anyone know where I can find an Ethernet card for a regular ST?
A quest I'm on for another friend.

One often overlooked XHDI driver is CBHD. The great thing is,
the sources are included and it's now public domain.

Maybe it could eventually be integrated into Milan TOS?

Using STinG, you are limited to FTP.

Using MiNTnet, you can install NFS or Samba (the freeware version of
Microsoft's own SMB).

David,

looking at the typenumber, it may be a bit like the 0663 and 0664 types.
Problem is that only a few jumpers correspond, not all of them.

Looking at the backside, and depending how many jumperpositions there
really are, it may be like this:

. . . . . .
. . . . . .

1 2 3 4 5 6 7 8

1, 2 and 3 are the ID jumpers, where 1 is bit 0, 2 is bit 1, 3 is bit 2.

4 is what they call an option pin. Not relevant

5 is the autostart jumper (on 0663 and 0664 types). If you shorten it, the
drive spins up when power is supplied. I had a 0664 connected but I
had to remove the jumper. Drive then starts after HDDriver is loaded,
with SCSI initiator set (on ID-7). If you leave it autostarting, it
won't get "ready".
6, 7, 8 can be anything. Master/slave stuff, LED bus, termination...
The 0663 and 0664 were completely different here.

Also, note that my 0663 had a block as above, but the docs only
showed/explained me the jumpers 1 thru' 5.

I couldn't find anything on a 0662 type either...

4303. /|\ Atari UT ???

Newsgroup: comp.sys.atari.st
Date: 1999-03-09 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36E4F5C2.4F25@geocities.com>
Source record: 83042

Being new to the Atari world, I've noticed that there was a trend going for a while.

Atari invents a new computer, the Atari ST. (about 1985)?
Then Atari comes out with the Atari TT. (about 1989)?
So if Atari had continued, would the next one be an Atari UT? :)

Also, if we follow the logical progression, Atari develops a new computer that works at 4x the processor speed of the last jump and a jump happens roughly every four years. (At least major jumps... like the one between the ST and TT). If this were the case, would it have gone something like this... ?

Atari ST 8Mhz 1985
Atari TT 32MHZ 1989
Atari UT 128Mhz 1993
Atari VT 512Mhz 1997
Atari WT 2084Mhz 2001 (3thz)
Atari XT 8336Mhz 2005 (8thz)
Atari YT 33344Mhz 2009 (33thz)
Atari ZT 133376Mhz 2013 (133thz)

I look at the last one and laugh... but then I think about it.. is it REALLY all that silly? In 1993 computers WERE at 128 Mhz, and in 1998-1999 we are running computers at 500Mhz. 2084Mhz by 2001? Well, they have beat the 1000Mhz barrier already... so why not? A 1000Mhz is a terrahertz or something like that. So by 2001 we could have a computer running at 2thz? :)

Anyway, an interesting look at a humorous trend that Atari might have taken, which turned into a eye opener of how far we could go. ;)

4304. File format of Personal Finance Manger Plus

Newsgroup: comp.sys.atari.st
Date: 1999-03-09 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <36e4fd4e28d4e0@the-gap.demon.co.uk>
Source record: 83043
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

I've been using Personal Finance Manager Plus 1.04 by Peter Veal for years now, and am very happy with it. One thing that's lacking though is the ability to import/export data in a common format ie. comma delimited etc.

Has anyone already written a import/export program that works with PFM+? If not, I might write one myself, and wondered if anyone knows the actual format of the .MNY file (it would save me having to dig around and guess). Anyone?

As a wanabe Atari WEB browser, I am daunted by the array of programs needed to do the job completely. Does Netscape do the same functions for PCs? If so, why can't a single more powerful program be devised for the Atari? I know my ignorance may be showing, but all the above array of programs has put me off, except for simple e-mail transactions.

4307. Liberty (Freedom v 2.x FS)/Gemjing problems

Newsgroup: comp.sys.atari.st
Date: 1999-03-10 00:00:00 UTC
From: tos4ever@ping.be
Message-ID: <36e6cdbc31ecc41@ping.be>
Source record: 82846

Hello,

Since some time I notice that it's impossible to play sound via Gemjing.
e.g. If I load the famous "cow.htm" into Cab I see Gemjing coming up but
that's that no sound at all.
After studying the Gemjing docs I found a possible reason for this.
If there is no "_SND" cookie installed then Gemjing wont play music.
Sysinfo 4.5 however revealed me that that cookie is installed but I
saw also another sound cookie entry namely McSn.

_SND 1 Sound: GI/Yamaha (PSG)
McSn E2656 Xbios Soundroutinen V 1.00

According to a doc I've found McSn stands for "MacSound for MagiCMac".

As I'm using a Hades running MiNT it took me a while to find out why that
cookie was installed on my system.
It seems now that the McSn cookie is installed by the system library
"Liberty" which is needed to run the fileselector Freedom 2.x (v2.05 in my
case)

So I rebooted my machine but now without Liberty/Freedom 2.05 (I used
Freedom 1.5 instead). Hurray I could hear the cow mooing now.

The problem is that I really want to use Freedom 2.05 and thus Liberty. I
wonder if someone knows a way to get rite of that McSn cookie.

TIA
Martin

>storage you have, the more people waste.)

Very true , the PC world in my opinion is moving to fast for the
software companies to make efficient use of the current hardware , it
doesn't matter how many needless routines and extra bits of code the
hardware is moving fast enough to hide these programming
inefficiencies.

I had a mate with C64 which he kept up with until not so long ago ,
and the some of the latest demos coming out of the little machine
could have shamed the ST! :-)
Really pushing the C64 to it's limits.

Reminds me of the potential which the STe had and still has if it to
was pushed to the limits of it's 'architecture'.

Aha! Must have been more than 6 months then, since I used 0.85. It ran on
MagiC, but had some weird drawing problems (I reported those then).
I'll see if I can fetch the later version and have time to test it.

He where did you find this about the two points?
I got probably the same letter (for 90,-DM) I can't see anything about
points.
There is a list of CD's ranging from 10,-DM to 70,-DM.

>
>Whiteline CD ROM alpha, gamma, delta, omega psi and kappa each for 2
>points (I have 2 points)

These CD's holds mainly soft and lots of Calamus and true type fonts.
There are alos some registrated versions of soft.
If you want a list of the registarted soft mail me privately.

>Compleet MiNT '99 2 points (this?)

MiNT '99 holds the complete MiNT stuff which is available on the Net too.
>
>Linux/68k 3 points (and I have only 2)

I probably go for this. It's version 2.3.
Can someone tell me if this will work on the Hades? I know that previous
versions didn't work.

^^^
That`s not so, - well, from my experience, the MAC software is a lot more expensive, even the shareware is more expensive on the Mac than on the Atari, and it`s almost imposibble to find any new pd software for the MAC.
I am not counting the PC world, where everybody is stealing/pirating software from everubody.

>In a nutshell, many Atari developpers are shooting themselves in the foot.

I don`t mind paying for software upgrades at the price ASH charges for upgrades, one doesn`t need to get every upgrade. I was even considering buying FREEWAY for the MAC. It`s cheap when you are a "power-user", a lot less than if I get it from a Danish Mac supplyer.

cheers

Hello,

I have a Matrix TC120? 3 or 8, I can't read the last #. It has a DB-9 Female connector on it. I tried using a DB-9 Male to HD-15 Female adaptor to connect it to my SVGA. With no luck... Any Ideas? Does someone know the pin layout to help me create an adaptor for it?

Thanks in advance...
Rob

Maybe I have been in the dark ages. I found this information while looking at the NetBSD ports. It seems in Japan, there is a 68K based computer manufactured by Sharp (I don't know if it is the same company we know over here in the States). It looks like there are 68K, 68030 and 68040 versions. Funny thing was there is even an 68060 accelerator for the 030 version. The Sharp web page was all in Japanese (my German is bad enough), so I couldn't make anything out of it, or even if the machines are currently being manufactured. The NetBSD page listed some pretty impressive supported devices for the machine however. I think I need to add one to my collection:). Anyone know more about this machine?

<snip lots of stuuf about free ISPs and British Telcos>

Hi All,

Thought I would chip in with my three pen'uth.

Don't worry about BT and the other telcos not making money out
of calls to Free ISPs. These companies make a good living from
these "cheap rate" local calls.

The larger telcos are getting upset because these calls are
choking up their networks. They would much rather that we
stop using them and make much more expensive long distance calls
instead.

It is these companies that control the networks and the cost of
calls so it is they who are responsible for creating an environment
in which Free ISPs can operate and thrive.

IIRC the company operating the service (the ISP) gets 70% of the
call cost and the telco gets the rest. If the telcos were to cut the
cost of off-peak calls then Free ISPs would not be able to operate.

Large corporations pay substantially less for their calls than the
British householder does because they have clout.

Once again We British are being overcharged for something and then
being told how lucky we are!

ditto electronic goods,
ditto food,
ditto books,
ditto music,
ditto cars,
etc., etc., etc.

Regards,

Peter.

Can you help with a few questions ?

What ST BBS software is available ?
What ST BBS software is still supported ?
Is there any ST BBS software that can be accessed by Telnet ?

Some software that I've used/heard of ....
ST Keep
MiniBBS
RatSoft
Octopus
Forem
BBS Express
Michtron - remember the rash of BBS's that appeared after ST Format put
it on their cover disk :-)
Cheers
John

This code knows how big the screen is, cause it does the
scrolling.

MiNT should really consider scrolling more than the no of lines
that fits the screen as "data loss" which should be prevented at
this very basic level and wait for a key with a short message.

Henk.

4326. Struggling through MiNT chaos

Newsgroup: comp.sys.atari.st
Date: 1999-03-10 00:00:00 UTC
From: vdjole@EUnet.yu
Message-ID: <7c4ededou4@SOLAIR2.EUnet.yu>
Source record: 82945

I apologize in advance to everybody if you have already seen my post
almost identical to this. It seems that my ISP have had some troubles
and the message just vanished- at least from my point of view. So, here
it is again, re-written form memory:

I am using a 4MB Mega ST with TOS2.06 loaded into RAM. I would like to make
a minimum MiNT installation, that would enable me to multitask GEM programs
when the need arise- I do not need the complete filesystem. I would like to
use MiNT with an AES as close to the original TOS as possible- using the
same setup and deskicon files- because I intend to use multitasking only
when I have to.

Why not Magic? Well, I tried it and it seems rather nervous, and besides,
the Magixdesk looks awful, and the jinnee desktop which is very nice is
so huuuge.

Why not N-AES/Thing? Again, somehow I don't like the looks of Thing; probably
just a matter of taste, please, don't spit on me.

So, mostly for compatibility with single-TOS setup, I have tried using
AES 4.1; with NVDI its slowness is bearable, and the change from the TOS2.06
that I am used to is almost unnoticable.

However, the selection and installation of right MiNT files is a nightmare:

* It seems that it is almost impossible to install MiNT if you don't
already have it installed (a nice catch-22 situation). For example, there
twas a post here some time ago (by Henk) that complained on the way MiNT
files are packed, and somebody wisely advised him to use a dearchiving
tool that is available only in MiNT. Also, the LF-only files can not
be comfortably viewed until MinNT is there (though some editors can
cope with this).

* It seems that the KGMD/KEMD installation is rather straightforward, but
one would have to reserve a complete (not small) partition for the
new file system before he can even see what he has got and read the
documentation.

* It seems that the MiNT-keepers would oblige Atarihood very much if,
instead of making a new port of application XYZ from Unix to MiNT,
they made a foolproof installation program, made satisfactory
documentation available and agreed on a single archiving utility
(I understand the benefits of GZIP+TAR, but couldn't they be unified
in a single program or run comfortably under a shell for TOS?).

Here are some items that I couldn't resolve myself, and would be very
thankful for any information:

* What file(s) should I find to read (before installation) with detailed instructions for installing and using MiNT? Containing, for example, a reference list of ALL keywords, values and environment variables needed (for various setups) in MINT.CNF and GEM.CNF; for example, docs for FreeMiNT 1.14.7 say that there is a new keyword added to MINT.CNF: SINGLEMODE. No further comments are given anywhere.

* Is the MINT.PRG+GEM.SYS-ONLY installation efectively equivalent to what is known as MultiTOS?

* AES4.1 is multilingual and, therefore, quite large. I understand that real "MultiTOS" uses AES4.0; which it smaller, faster, more or reliable?

* Is it possible (without being a hacker guru) to edit AES4.1 like there are tools to edit TOS2.06 and 3.06- to remove multilingual balast, edit resources (limit on number of desktop icons is quite small, and some cosmetic details might be changed)

* I have tried MINT.PRG in FreeMiNT version 1.14.7 and it works on my computer. I have tried v.1.15 and it freezes during startup. Why? Docs say that this version has some new features concerning filesystem(s) and there are some utilities, but it is completely unclear how to use that. Which would be the recommended version for my particular CPU and amount of RAM?

* Some older programs won't run in the setup that I have made. I would particularly like to be able to run Megapaint- at the moment it won't go. It seems to load from disk and then just exits. It DOES want to run from NAES/Thing- in "single" mode, but is it possible to start it from AES 4.1?

* What would be the correct order of running, for example: HSMODEM, NVDI, MiNT, LACESCAN? Some docs say that HSMODEM must go before MiNT, but then some programs complain that a RSV-something cookie is missing, so I run HSMODEM again and then it is OK- but this seems stupid.

* The MINTSETT accessory shows a field named "AV-server" which is grayed-out. Is it possible to make this protocol active under AES4.1, and how?

* My computer has TOS1.4 in ROM and I load 2.06 in RAM. Would there be any advantage in using MiNT over TOS2.06 vs. TOS1.4 or would I just be wasting memory?

* Is a shutdown program needed for my setup?

Thanks to anyone for any comments, help, or pointers.

Cu.

|The List is ENDLESS. There is still ALOT to talk about for ATARI if that is
|what you are interested in doing. Also there is an online alternative platform
|magazine that is looking for a TOS/ATARI Editor. <snip>

Brian,

Your points are all well taken. Although I _still_ believe that information about what is going on in the rest of the computing world is very important, we ARE working on listings like active dealers, developers, software and hardware reviews, listings of current program versions, tips and tricks, and several other things. The problem is simply one of time and manpower.

Your high opinion of our abilities is welcomed praise. It's nice to be noticed and appreciated. But in addition to talent, we need more fingers for the keyboards.<g> We're looking for people who's love of the Atari world equals our own so that we can actually make some of the things we

want to see come to life. We've already got several people lined up, but it will take a while before we start seeing some of the features, reviews and articles.

As for the UseNet/People Are Talking, there are many people who either don't have access to the NewsGroups or choose not to wade through the large number of posts. It's been quite well received since we started the column back in STR. As with any feature in A-ONE, if we start hearing that people are tired of it, of course we'll consider discontinuing it. Of course, since you and many others are regulars here in the NewsGroup, everything in People Are Talking is old news to you. But we're going to find other things to keep your attention.

Take care,

Joe Mirando
Managing Editor, A-ONE Magazine

Don't often just post, but I found this tonight and just had to
pass it on.

I have a Supra Express 56k modem on my TT. Now I went and grabbed
the flash updater from their ftp site to get my modem up to current specs.
Well for those that haven't followed the world in general Supra is owned
by Diamond (have been for some time now).

Anyway so I'm poking around ftp.diamondmm.com for a litle bit and
discover that they still have an old atari directory. Nothing exciting.
But just kind of humorous I thought.

Probably could get them to kill it tomorrow if I called up diamond
and said that I downloaded a program from their ftp site and could I
please get some support for it ;)

Indeed, and this is not the problem.

> MiNT should really consider scrolling more than the no of lines
> that fits the screen as "data loss" which should be prevented at
> this very basic level and wait for a key with a short message.

But when do MiNT stop logging?? The kernel have absolutely no idea what init does, and it's the scripts run by init that outputs the interesting stuff. How can the kernel know what and when to log? Or should it wait for a keypress everytime a line scrolls off the console when the user runs an interactive bash- session on it? *That's* the real problem. Logging everything from MiNT's start to INIT or GEM starts is not a problem at all, but there's not much interesting there anyway ;-)

We wouldn't be 68K if Atari had followed Motorola further. We would be
PPC and happy about it.

4335. New MyMAIL

Newsgroup: comp.sys.atari.st
Date: 1999-03-10 00:00:00 UTC
From: epkerha@epk.ericsson.se
Message-ID: <7c5502$9o4@newstoo.ericsson.se>
Source record: 82954

Hi all !

Now it's time again for a new MyMAIL version (0.81)

In this version there is only smaller bugfixes
and some code optimization.

From the history file:
**** 09.03.1999 ****
Rev: 0.81

- Now it is possible to use upp/down arrow
to select user config in user select window.
Enter will close the window.
- Some smaller code optimization in the editor
to get litle faster code.
- More icons (but not all) are now in mono for monocrome users.

You can download from this address:
http://www2.tripnet.se/~erikhall/programs/mymail.html

Best Regards

Erik Hall

Right, I found those a while ago too. There are some Supra Drive format
utilites there. Makes you wonder how well they check their PC related
files:).

> Have reached long time ago and it haven't stopped it yet. It's scary
> how inefficient tech might turn out to be the most widespread.
>

That's one great point this thread has brought out is though the
Atari/TOS platform may only be at between 8-60 mhtz, at least the code
is more efficiently written, so you don't need the 400 mhtz machine to
run massive amounts of bloatware. (Which is not just a fault of
Microsoft, but MANY companies out there. Seems the more speed and
storage you have, the more people waste.)

To give an example of knowing how much room you have to work with, my
dad's first home computer was a Sol Terminal which had 2K of ram.
1K was used by the disk operating system, and the other was able to be
used for programs. No joke! I have been impressed ever since with what
programmers did with that 1K. The best Star Trek game ever was on that
system, and it run off 2K (text characters, but well done!)
I've always wondered how they did it, and wondered how to write such
efficient code.
Eventually my dad managed to construct several boards with dozens of
chips on them and arranged the computer to have 48K. All the other
computer folk at that time thought he was nuts for setting up so much
unneeded ram. :)
That was in 1976.

> tool that is available only in MiNT. Also, the LF-only files can not

Well, the beta-kernels are packed with gzip, but I have seen "production-
kernels" packed with zip and lzh. It depends on what you're looking for. And
FIY, neither tar nor gzip are MiNT-only, they work under TOS or MagiC as well.

> be comfortably viewed until MinNT is there (though some editors can
> cope with this).

TOS' built-in viewer is the only one I know of which doesn't handle these, but
I agree that these files should be CR/LF-formatted.

> * It seems that the MiNT-keepers would oblige Atarihood very much if,
> instead of making a new port of application XYZ from Unix to MiNT,
> they made a foolproof installation program, made satisfactory

The "problem" is that MiNT (i.e. the kernel itself and the additional tools)
are so flexible and comprehensive that it's near impossible to write a wizard
for everything.

If you're looking for something like RPM or Windows install/remove I agree
that it would be a nice thing to have, but again it's a question of time and
resources. If anybody wants to give it a try I would be more than happy to
contribute if I can :-)

> documentation available and agreed on a single archiving utility
> (I understand the benefits of GZIP+TAR, but couldn't they be unified
> in a single program or run comfortably under a shell for TOS?).

Have you tried PacShell? From the docs it looks like it handles tar and gzip
too, but I'm pretty comfortable with a shell so I have never tried it.

> * What file(s) should I find to read (before installation) with detailed
> instructions for installing and using MiNT? Containing, for example, a

There is a READ.ME in the "official" (i.e. not betas) MiNT-releases...

> reference list of ALL keywords, values and environment variables needed
> (for various setups) in MINT.CNF and GEM.CNF; for example, docs for
> FreeMiNT 1.14.7 say that there is a new keyword added to MINT.CNF:
> SINGLEMODE. No further comments are given anywhere.

...but it hasn't been updated since 1.12.something :-(OK, I'm going to sit down in front of my Falcon tonight and put together an archive with a kernel, a commented mint.cfg (or is it .cnf?) and some other stuff I have.

> * Is the MINT.PRG+GEM.SYS-ONLY installation efectively equivalent to what
> is known as MultiTOS?

Yes.

> * AES4.1 is multilingual and, therefore, quite large. I understand that real
> "MultiTOS" uses AES4.0; which it smaller, faster, more or reliable?

It's neither :-) It's bulky, extremely slow and notoriously unreliable. I still can't understand how Atari could ship such a crappy product. It really, really sucks.

> * Is it possible (without being a hacker guru) to edit AES4.1 like there
> are tools to edit TOS2.06 and 3.06- to remove multilingual balast,
> edit resources (limit on number of desktop icons is quite small, and some
> cosmetic details might be changed)

I'm no 4.1-guru, but I know that it can load external resources which can be edited with a normal resource-editor. I'm afraid I don't know anything about the format of this.

You can save a lot of memory by ditching the internal desktop and use something like Gemini instead.

> * I have tried MINT.PRG in FreeMiNT version 1.14.7 and it works on my
> computer. I have tried v.1.15 and it freezes during startup. Why?

There is a problem with this version on 68000-machines. It has been fixed in the 1.15.1-beta kernels.

> Docs say that this version has some new features concerning filesystem(s)
> and there are some utilities, but it is completely unclear how to use that.

You don't need any particular utilites, the only thing you need is to add some keywords to MiNT.CNF:

NEWFATFS=A,C,D,E (List all partitions which will use MiNT's new FAT-FS)
VFAT=A,D,E (List all NEWFATFS-partitions which also use VFAT)

And then there's the two keywords for managing the write-back cache, I can't remember their exact syntax right now...

> Which would be the recommended version for my particular CPU and amount
> of RAM?

I have very little experience with MiNT on 68000 machines, as I didn't use it seriously until I got my Falcon. But 1.15.x (the later ones which actually

work on 68000) are generally faster than older ones.

> * Some older programs won't run in the setup that I have made. I would
> particularly like to be able to run Megapaint- at the moment it won't go.
> It seems to load from disk and then just exits. It DOES want to run
> from NAES/Thing- in "single" mode, but is it possible to start it from
> AES 4.1?

I don't have Megapaint, but it sounds like a bug in the GEM.SYS-beta you use since it works with N.AES.

> * What would be the correct order of running, for example: HSMODEM, NVDI,
> MiNT, LACESCAN? Some docs say that HSMODEM must go before MiNT, but then
> some programs complain that a RSV-something cookie is missing, so I run
> HSMODEM again and then it is OK- but this seems stupid.

I believe I explained this in another thread not long ago. NVDI should definitely run before MiNT. HSMODEM must also run before MiNT, but there is a catch with this: Since MiNT use HS-Modem's new serialdevices for it's own serialdevices it must delete the RSVF-cookie so other applications don't use HS- Modem directly and thus mess things up for the MiNT-devices.

If you don't use these devices though, but only use programs that use RSVF directly you can safely run HS-Modem after MiNT. Beware of conflicts though, you should never mix the two kinds of programs! If you can then you should only use programs that access the serial-ports through MiNT's devices, since these can be locked to prevent confusion if two programs tries to access the same port at the same time.

> * The MINTSETT accessory shows a field named "AV-server" which is grayed-out.
> Is it possible to make this protocol active under AES4.1, and how?

It's greyed-out because you don't have an AV-server installed. Jinnee, Gemini and Thing are all AV-servers, Thing is currently the best. Both Jinnee and Thing use an awful lot of memory though, but you should give Gemini a try.

Most modern software relies on the presence of an AV-server for many things, and your system will definitely work smoother with one installed.

> * My computer has TOS1.4 in ROM and I load 2.06 in RAM. Would there be any
> advantage in using MiNT over TOS2.06 vs. TOS1.4 or would I just be
> wasting memory?

With the newer 1.15-kernels you are basically just wasting memory, since you're only using the (X)BIOS-parts of it anyway and 1.04 has a pretty solid (X)BIOS.

> * Is a shutdown program needed for my setup?

Not really, but you should use one just to sync the filesystems if you use any filesystems with a write-back cache. If you switch off your ST before the write- back cache is flushed you'll probably loose data and maybe even corrupt your filesystems. MiNT syncs the filesystems automatically every 5 second, so if you wait atleast 5 seconds before switching off you're safe.

For the same reason you should be careful with removable media as well.

> Thanks to anyone for any comments, help, or pointers.

I really appreciate these concrete questions for a change :-)

ROTFL!

What Jo really means is, he is running a heavily JoEven'ized KGMD,
where everything in the package has been hacked or updated.

It's been years since I used the TAF distribution, but I remember having a similar problem myself. I tried to look through some old notes yesterday to find out how I solved it but couldn't find anything. However, I do believe it had something to do with NVDI (which btw. is of no use anyway). Sorry I can't be more specific, it's been too long :-)

> The reason I am doing this is that I want to teach myself UNIX. So if you guys
> could also point me toward other sources of info it would be appriciated.

I would recommend that you drop X, since you can't run anything more than one xterm-session anyway with only 4Mb. Look in mint.cnf, IIRC the INIT-command starts X directly. Change this to start u:\bin\bash (or whatever shell you use) instead, you will then boot directly into a command-shell.

I recommend that you buy something like "Unix unleashed" or similar to get familiar with the unix-concept before you start messing around too much.

> everything from MiNT's start to INIT or GEM starts is not a problem at all,
> but there's not much interesting there anyway ;-)

I donï¿½t think so, I would consider it interesting to see the output of
the
device-drivers to see for e.g. wether my ethernet-board was installed
correctly
or not and so on.

Additional logging (from the point MiNT starts init) can be done in the
rc-scripts
by rerouting the std-out and stderr not to /dev/null but to a real
file....
also you can duplicate the messages the rc-scripts are showing on the
screen to
get them delivered to a file.

Later (when Gem is initialized) you can use the "console"-command to get
messages
logged to a file.

So the only part you canï¿½t get your hands on right now is the part MiNT
does before
init is called ;-).

Greetings,
Bernd

If that would be archivers for the "tar" and "gzip" formats they are
available for single-TOS too.

>* It seems that the KGMD/KEMD installation is rather straightforward, but
> one would have to reserve a complete (not small) partition for the

Katherine Ellis has made installation easy for us non-germans too, the
documentation is quite straightforward also. I can't recall that the
docs are inside the installation though. I think that in the same
directory MiNT is (at least on FUNet) an explanatory text about what
the packages are, what they need and how to do it.

>* It seems that the MiNT-keepers would oblige Atarihood very much if,

This exists, at least too a degree. From what I've understand the MiNT
98 CD has a better installer, and the "real" TAR uses gzip when it's
in its proper enviroment. The installer does depack them automatically
though.

I'll get back to you with more details (real answers) to the other
questions later on.

No, that's my job...

>but rather provide it with some very basic hardware-drivers. Titans new PCI-

For a bare bones driver (which would be very) slow, you only need four
routines (apart from whatever setup stuff you might need to reach the
graphics mode you want):
- set pixel
- get pixel
- set colour (as in update internal tables and/or hardware palette)
- get colour (return a previously set colour in usable form to fVDI)

For usable speed you'd also want to implement:
- mouse (the pixel by pixel version of this is _really_ not recommended)
- line (patterns are not really needed, and this will cover solid fills)
- blit
- mono-expand (apart from the obvious icons, this will also give you text)

For real speed add:
- fill
- text

Any of the functions can return specific sub-functions to the fVDI engine,
which will then use the next best method available.

>based solution for Falcons use fVDI with an ATI Rage driver. This is not hype,
>it's up and running.

Yes, I can testify to that.
I have one of the first Eclipse prototype boards running and do most of
the development from within fVDI on the ATI RageII card (mach64 based).

The only major thing still missing (see the fVDI WWW page for details) is
screen->RAM blits. The problem with those is that the screen memory is
bank switched (to get over the 4Mbyte RAM limit of the NOVA).

>> > You can also use the completely free fVDI Mach-driver (is it complete yet?)
>> How can I use it, if it is not complete yet?
>
>Live with the fact that some functionality is missing. It will be finished
>though, don't worry.

It would be a lot easier to get there if I ever got any feedback...
I don't have all that much software to test myself, and time is always
a problem.

>> >> market. Because of technical reasons it is not possible to convert a
>> >> PCI card to VME signals.
>> >
>> >What's the problem?
>> Critical timing, but I suppose following your logic, that's not a problem

It would be rather strange, IMO, if it wasn't possible to do an interface
between the two busses. Especially if you don't worry about bus mastering
and interrupts (none of which should be necessary to get a graphics card
to work).
You can get a _lot_ of things into a modern programmable logic chip of
some kind and they are fast.

That is the law of Mr. Moore: you get more of everything according to
the formula: -----error---error--memory full.
Sorry cannot produce formula because of stack overflow. (TOS error
246: need more memory).

The easy way to go if you do not care to have a screen of 640 x 480
in b/w them you can attach a TV with SCSRT (or via a videorecorder
with SCART.
Only needed is an Atari-PAL-TV-SCART cable.
I have here Atari 13 p male straight cable connectors. Together with
a SCART plug, your own peace of cable and a how to do manual (also
to get here) you can connect in color.
I can also look in many boxes and maybe I am so lucky to find for you
a ready cable. Interested?

Hi folks,

Downer of the day:

In Germany Delta Labs makes the Revolution CD Magazine (in German).
I have a subscription on it and the last issue was nr. 10.
The artikels in the magazine were quit nice (there even was something
about MiNT!) and always a big load of recent software on the disk.
PD, shareware, freeware, Gnu-ware, light-ware, demo-ware. Lots of it.
Sometimes I take a look at a disk and always find something I never
heard of or find a update from a very old program such as Plongo.

You see, I speak a litte bit in the past because negative
interference of outside happenings.

I got a letter of them telling me that they have to stop because they
lost a lot of money (the money from the subscribers) when the
producing company of the CD went bust and their money is gone for
ever. No revolution nr. 11 CD.
They have not enough money left to re-invest.

But they do their best really to soften the blow for me. My DM 40,-
is valued at 2 points. I can now make a choice from their other CD's.

But what o what? help me make up my mind:

Whiteline CD ROM alpha, gamma, delta, omega psi and kappa each for 2
points (I have 2 points)
or
'Erotica' ,'selected signs' or 'all about Signum' each 1 point.

Compleet MiNT '99 2 points (this?)

Linux/68k 3 points (and I have only 2)

A friend of mine still struggles as systems programmer in
a big firm with hundreds of programmers.

The most often used features of modern editors are:
"copy -- paste", and "replace all".

Cunstructing procs or funcs is considered too "specialistic" for
a common programmer.

Henk.

And the Falcon NOVAs really, even if it has been rather long since I last
tried to build the mach64 driver for those.

>>I'm beginning to have the feeling that this fVDI is a MiNT application ?

fVDI is not really an application at all, but a TSR that replaces part
of the system. Since that part (the VDI) is (almost) completely independent
of the rest, it shouldn't matter if you're running TOS, MiNT or MagiC.
(In reality it's not quite that simple.)

>>Can someone assure me, and tell me that I'm wrong?

You're wrong. I currently develop fVDI in TOS since it's more difficult
to debug things under MiNT and I don't own MagiC. As I explained above,
there's little reason for there to be problems on the other systems and
fVDI has worked on all three before (it's been a while since I tested).

>fVDI is a FREE VDI replacement, being worked on by I gathered a Swedish
>crew. Contact Johan Klockars about it. I forgot whether I fetched it from

I don't think I qualify as a 'crew' and I've probably done more than 98%
of the work so far. ;-)
It would be nicer if it was a 'crew', though. (Hint, hint!)

>It's not finished yet, I ran a previous (I think) version on TOS and on

fVDI v0.90beta is more than half a year old, but for a little while yet
I'd still recommend that one. Later beta versions have mainly focused on
making things work well with the Eclipse/RageII.
Two days ago I made v0.91beta available, but I have to change a couple of
things in that before it works really well on anything but the RageII.

>MagiC. The TOS did a nice job, the MagiC combo had a few drawing probs,
>both in TT med rez and on my card. This was some months ago, I don't know
>what the exact state is now, but they've come up with improvements.

Nothing has been changed in the bitplane and FalconTC drivers lately, but
the fVDI engine itself has improved.

>
>http://www.uk.research.att.com/vnc/

I haven't checked how VNC does things (from the front page it sounded as
if it transmitted the entire screen contents (probably only the changed
parts)), but I've actually thought about writing a 'network' driver
which could display VDI graphics on a PC via a parallel connection.

On the other hand, a good Atari emulator on a reasonably fast PC could
outrun my Falcon+AB040, so it would be better to run the software on
that machine instead. Then we 'only' need an fVDI device driver that can
use the native graphics modes on the PC. :-)
Such a driver could be partly native 80x86 code to get some real speed
(or it could even use the Windows GDI, X windows or whatever), without
very much work.
I contacted the TOSBox author about this possibility some time ago, but
he didn't seem interested (which was a bit strange, IMO). I don't know
if PacifiST is still being developed, but that could be another candidate.
(There is of course nothing that's stopping the commercial Atari emulator
authors from writing fVDI device drivers either.)

>
> Jo Even Skarstein
>

It is meant for the pysical screen only.
Consider it as a form of 'hardwiring' applied to software.
Just a rather simple failsafe.
Somewhere in the mint bios is the code that actually physically
is going to throw away a line by moving the screen contents up.
Probably by vro_cpyfm. Only *there* you apply the check. In that case
redirecting and logging is in NO way affected.

In fuzzy code:

```
static int lct = 0;
extern int screenlines;

If I have to move up the screen
then
if lct-1 >= screenlines
then
display some msg or sound a bell or something
wait for key
lct := 0
```

```
fi
move up the screen
increment lct
fi

....
```

If you are able to clear lct on any keyboard input in the same physical screen context, that would be perfect.

Everybody would benefit from this.
I often put some simple printf's in a GEM program I am testing. I dont care if the screen got messed up (I'm testing) but I would be glad if I could relie on the fact that none of my printf's will get lost.

Even If you are debugging mint itself, you may be happy with such a thing. :-)

Henk.

**** Stuff Deleted ***

Thanks Jo & Bernd; I grabbed the SAMBA file off funet.

I am aware of the tropic NFS server, it does work well.

I actually came across a freeware NFS server for the PC (TGPNFS), but it does not appear to work with MiNT. Do the port numbers have to match on each side, because they do not at the moment.

In my setup, FTP & Telnet work fine, the port numbers on each side (as reported by rpcinfo) match.For NFS, they do not. I do not have the setup with me, but I recall MiNT's portmapper has the NFS ports at 2049 & 2050, while the PC has them at 582 (or thereabouts).

I have not found any freeware NFS clients. The available ones are usually $40 upwards.

All I want is to be able to copy some files bwtween machines.Samba should be fine for that.

I have the following software & hardware for sale (I have no ST now).
all s/w is original unless otherwise stated

HARDWARE.....
.....
Naksha Hand Scanner (mono)
Vidi ST + Colour splitter
8bit Sampler

SOFTWARE.....
....
Pagestream 2.? (boxed with manuals)
Stos
Degas Elite
Music Studio
Spectrum512
Quantum Paint
Several original games (Virus, Wizball etc..)

Lots of disks of games (not-so-original)
Several Demos
Shareware stuff
Cover disks from ST User, STWorld, ST Amiga Format / ST Format

Total number of disks must total around 200.

I have to agree.

When I purchased ImageCopy 4, the day after I received my copy from
Computer Direct, a message from Atari Computing asking for a review
of ImageCopy 4.1 landed in my e-mail.

Furious, I called Computer Direct and demanded explanations about why
I wasn't send the most recent version, but they declined responsability.

After a few e-mail exchanges with FaST Club, someone finally agreed
to e-mail me the upgrade package for free, but there was a struggle.

The same thing happened to many people who had just purchased CAB 2.5
from System Solutions, right when CAB 2.6 was released in Germany.

When I think about the Atari scene today, sadly, it has become a market
of people complaining there is no money to be made on Atari products, but
at the same time their prices are twice the amount one would pay for the
same thing on other platforms (in the case of browsers, Netscape is free!)
which results in people moving on to Mac/PC because it's cheaper.

In a nutshell, many Atari developpers are shooting themselves in the foot.

Pity...

: Maybe it is somewhere in the manuals, but maybe not.

: During boot MiNT spews messages to the screen.
: Goes on with sh doing scripts.
: More messages.

: I want all that in a log-file so I can see afterwards what happened.

: I tried with AutoMore
: And all output of auto-folder programs I can get in a log-file.
: But not the MiNT messages. What makes him/her special?

: I am sure these messages are not produced for fun or giving an
: interesting look.

: Is there any MiNT-adapt that knows a solution?

As others have pointed out, you should be able to set the console device to a real file. It does seem to me that the file would have to be on a TOS partition, since MiNT doesn't know about other filesystems until the XFS has been loaded...and the XFS prints something to the console. Bit of chicken before the egg there.

Anyway, to capture the output of shell scripts, you can use a tool called script, which echoes everything (both input and output) to a file. I don't know if it's available for MiNT, but it is on the Linux boxes here at school, so it should be a trivial matter to port it.

Hi, its me (the "other" Ronald) again. Well, I missed the main point of your first post. I.e, that you wanted the messages during boot-up (e.g. from the Auto folder programs). The suggestions I gave you would only work *after* a boot-up.

Martin Byttebier <tos4ever@ping.be> wrote:

>WRONG AGAIN. Bernd speaks very good English. How can he improve the CD if
>nobody tells him about the problems he is encountering.

I don't care what languages he speaks, for my part he may speak Chinese. All I know is that he doesn't reply to email, not in German, English or even Chinese. What the hell do you want me to do ? Drive down there, camp outside his house and beg him to please please please talk to me ?

You and other MiNT fanatics here may find it normal, to ask a programmer help via Newsnet, well I for one don't. If I stumble against a problem I use personal mail. He's not obliged to answer me of course, that's his own prerogative, just like it is mine to say that the Installation routines of MiNT 98 are lousy... which is not suprising really, the programmer kept it all to the general MiNT standard ==> Lets move on, lets make it difficult.

And another thing: It's me having certain problems, and needing help, it's not the other way around. I'm not one of his beta testers. Is this whole mess ever been beta tested I wonder?

BTW: what do you mean with "WRONG AGAIN", is this some kind of game, and are you the referee?, my playing days are over.... I haved moved on

>Kindness, sorry don't know that!
>Answering an e-mail, how on earth must we do that?
>but we do know how to lead someone up to the garden path.

What exactly are you trying to prove here? Maybe I need a new brain, but you
surely need a couple of glasses. READ the posting...
Every ASH customer knows that there are three yearly updates, spring, summer
and winter. This guy tells us he's updating MagiC, in the worst case if he
owned a very old version it would have cost him 69 DM maximum, which is
a lot cheaper then W98 (400DM) and also cheaper then MiNT98.(150DM)
Then he starts raving about the high asking price for the new update, go and
take a look for yourself http://ash.sww.net/news/0199/01991.html, yep, right
29 DM, that will break the bank!!. I suppose somebody from ASH has put a gun
to his head forcing him to get the update ?

He says he received a newsletter, well is that service ? No, You probably
call it a certain form of brainwashing, luring innocent people into the evil
claws of ASH, Forcing them to use that develish OS (MagiC)
I received a newsletter in my mailbox about a week ago, and yesterday the
printed newsletter arrived..... but I'm brainwashed already so I gues that
doesn't count. Whenever I order something from ASH, it arrives here within

10 days, which can't be said about every softwarehouse.

He doesn't tell us what other BIG updates he made, but he tells us they cost several hundred marks, so having a look at the ASH update pricelist, I can only make the conclusion, that he updated every atari product they've got. If this is so, he has access to the FREE in between updates for the ASH products which do not get a major update.

He sends them email complaining, and doesn't get a answer back (this sounds familiar) what did he expect ? a free ride?
What do you expect them to do? you posted this garbage here after all. Just suppose you update Calamus to version 98 today, do you really think that INVERS will give you version 99 for free next month?

There is no such thing like free software from a commercial softwarehouse, if you want free software you have to run that certain wonderfull piece of freeware OS and all the other stuff, that is a option and a choice one makes. If one decides to use software from a commercial softwarehouse that is their choice also, so stop knocking people because they don't use the same apps or OS you do. Just because you are pissed of because MagiC doesn't run on your computer is something which can't be helped by any of us. When the HADES sells in volume, I'm convinced a version for that machine will be available. ASH is a commercial sofwarehouse, not a charity, try to live with it, if you don't like their products, stop using them.

Maybe you could email "your German Friend", and tell him about MiNT and all the wonderfull programs its able to run. If you're very convincing who knows he might just try it out and become a "believer" also. Since he wants free updates, he'll be delighted, a completely new unknown world will open, and if ever he should stumble upon a problem, all he has to do is to write to this newsgroup, where all the MiNT fanatics will aid him and lead him back on the right path, Amen

Cheers from Belgium

Brainless Dennis

4375. Phantasie II

4376. some new TAF Developments

Newsgroup: comp.sys.atari.st
Date: 1999-03-11 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <36e7d28d.0@nemo.idirect.com>
Source record: 82795
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy.alt.atari

we've been pretty busy lately, the executive of the Toronto Atari Federation, in working out and streamlining the club so that it will go on well into the upcoming new millenium. And it's time we let you in some exciting new developments.

NEW LOWER MEMBERSHIP FEES:

Thanks to some judicious restructuring of club finances, as well as a re-think on how resources are put to use in the club, we've been able to put in some substantial savings on the overhead the club generates in order to function. And, we've decided to put what we've been able to save back into the club.

Thereby, we announce that we've slashed membership fees back down to a more affordable level - $25 a year, which includes admission to our monthly (September-June) meetings which feature troubleshooting sessions and the hottest new software and hardware out there for the discriminating Atarian, a table at the famous and exciting TAF FLEA MARKETs, and a subscription to the TAF-produced and highly informative PHOENIX newsletter.

TAF ONLINE! BBS NOW OPEN TO ALL ATARIANS!

since TAF is dedicated to the preservation of all Atari computers, as well as the education of all Atari users whether they be novice or power user, we realize that we are a resource of knowledge that should be shared. We are also cognizant of the fact that many BBSes, due to the huge popularity of the Internet, have fallen by the wayside.

We have thereby now decided to opne up our previously members-only BBS, TAF Online!, to all interested Atarians of all stripes, whether they own the original 8-bits, STs, TTs, STes, Megas, Falcons, or the new generation of TOS clones - we'll even welcome those who have come into the joys of Atari computing via such popular emulators as GEMulator, MagiCMac, MagiCPC, TOSBox, PacifiST, etc. The TAF BBS includes a number of message bases, including the USENET conference comp.sys.atari.st and the FIDONet forums, and also includes file areas for uploading and downloading the latest PD and shareware software offerings (no pirates allowed!).

Interested? Just set your modem to 8-N-1 and dial up TAF Online! at 416-421-8999. Follow the instructions on getting registered on the board (and be sure to read the rules on proper BBS use and ettiquette by our beloved sysop, Dave Lee), and Bob's your uncle. BTW, we can be accessed at up to 28000 baud.

NEW TAF WEB PAGE ADDRESSES

we've been fortunate to have a web page maintained for many years
by Stephen Christian using his ISP account, in which much information
about TAF and Atari may be found. And now it'll be easier to remember
where to find us - since we're now registered to be accessed via not
one, but TWO domain-name redirection services whose names are much
easier to remember.

therefore, you can now get ahold of TAF's web pages with the
following new URLS:

http://welcome.to/taf

http://taf.atari.org

you can still access the TAF web pages at their original URL:

http://www.interlog.com/~schrist/taf.htm

Up for bid is a Atari STe Computer Package.

Atari computer package: STe 4meg/Tos 2.06 allows(Drop and load program).
New DD floppy replace 12/98 from "System of Tomorrow".
New Wizard mouse can be used with STe or Amiga.
*
System Disk Cooling fan(ARCHER) for STe 120VAC 60Hz 12w.
Power Cables/Manual/Computer/TV switcher/RCA cable.
Monitor SM124/Power Cables.
*
Megafile 30 HardDrive-Cables/Manual/System disk.
*
Golden Image Scanner (Blk/white) Text/Photo 100-400DPI.
Org.Manual/Software (Migraph "Touch-up").
Plus Scan:Align Board.
Power Pad.
*
Clock Module External (Eureka/Software)/Battery New.
Infotel Modem 14.4 Fax/Voice (Cables)/Power pad.
Two Stereo speakers for Audio output.
One Org. Atari JoyStick.
Two 8" extension Cable's for Mouse/Joystick.
Extra Org. Atari mouse(Working).
Two replacement DD Floppy drives(epson SMD-380 not working/Org for Parts!
*
STe is Y2K ready!
Perfect for Studio Musician(Midi/Keyboard-Slave control).
*
All Above HardWare/Software is one owner property!
Excellent Condition!!!
*
Any question about above package e-mail:
rescueme@neo.rr.com.

shipping "FREE" w/in the 48 U.S.States
(NO "Free" Shipping internationally).

The AES is the part of TOS that contains all the nifty little gadgets used by GEM (menus, windows, drop downs, pop ups, icons, widgets, etc...). The AES 4.1 is basically the extended GEM.SYS included in MultiTOS or the various MiNT distribution kits. N.AES or MagiC are also compatible with it. You don't actually upgrade to AES 4.1, as it's part of an upgraded operating system.

Basically, what you need is either MiNT, MagiC or N.AES.

I don't know about MyMail, but theres not much point in running FreeGem without a multitasking environment anyway.

MyMAIL is working best in multitasking enviroment
but is not a requirement.

But it needs AES 4.1 to work correct
with lower versions the icons can not be displayed.

4381. [ANN] CoMa 4.9.0 supports USR Pro Message Modem Self-Mode

Newsgroup: comp.sys.atari.st
Date: 1999-03-11 00:00:00 UTC
From: Hartmann@ThePentagon.com
Message-ID: <1doikgu.14toaql1ijz663N@stardust.isdn.cs.tu-berlin.de>
Source record: 82800

Programme-Name: CoMa for Atari Voice/Pro 4.9.0 (COmmunication-MAnager)

Purpose: fax & voice-mail-system, to send & receive fax,
answering machine, mailbox & terminal with internal z-modem

Programme-Type: Shareware / Crippleware

Author: Siegfried Hartmann

Requirement: Computer with MagiC[Mac|PC] or TOS

Download: Softbaer-Mailbox: 030/62709-572 (ISDN X.75 & V.34)
or Homepage: <http://www.ThePentagon.com/Softbaer>

CoMa_Atari_4.9.0.zip (520 KBytes)

****
****

CoMa has the following common functions and attributes in all levels

- english documentation
- fax-class 2 & 2.0
- polling (send poll-request-tone only with class 2.0 and some class
2-modems)
- network-capable fax-job-management (3 jobs in 24 hours)
- Serial fax
- Display of the calling-number with ISDN-modems
- Display of call units with ISDN-Modems
- internal editor
- incoming pages are displayed during fax-reception !!
- text can be mixed with graphic-logos and signatures
- fax-voice-data-number management, including groups
- management for incoming fax/messages/mails
- administration of 8 telephone companys
- zone- & and time-dependent selection of telephone-company
- mailbox with internal send & receive-z-modem
- terminal mit internal z-modem
- support of the USR 56k professional message modem self-mode

* * * * * * * * * * CoMa Voice (additional) * * * * * * * * * *

- Answering machine for ZyXEL, Creatix, Elsa/TriStar,
Sportster VI/Voice/Flash and Smarty/Cybermod, kik & Lasat-Modems
- Day & time programmable answering messages
- Multiple outgoing messages for several ISDN-MSN
- Time dependent redicrection of incoming calls
- Remote control / recall of new received faxes

- Recall of 7 special messages by DTMF-code
- Real time decoding of sound for Mac/Atari-Soundsystem of ZxXEL ADPCM3/ADPCM4, Smarty/Cybermod u-Law- & Rockwell ADPCM4-Sounds
- Wave-Sound conversion in ZyXEL- & Cybermod- & Rockwell-format

* * * * * * CoMa Professional Version (additional) * * * * * *

- fax- and voice-on-demand-system
- any amount of messages via DTMF tone recall is possible
- each category can contain up to 100 messages and/or 100 fax-pages.
- statistic of category recalls
- first-level- and second-level-messages can be put together from multiple voice-files.
- for the mini-mailbox you can assign personal passwords and download-folders to as many users as you want
- personal message for each caller, who has an entry in the numbers-list (with ZyXEL Elite & MicroLink ISDN, if caller MSN is displayed)
- unlimited fax-jobs
- Faxtransmission via polling request (DTMF-PIN not needed - only for Class 2.0 modems)
- permanent poll-sender possible (caller gets fax pages even without sending a poll-request)
- time-dependent messages for 10 MSNs for ISDN
- connect-mode can differ for each MSN

* * * * * * * * * * * New in CoMa 4.9.0 * * * * * * * * * * * * *

- support of the USR 56k professional message modem self-mode
- enable and disable of the self-mode
- display of...
- free modem memory
- number of voice and fax files stored
- number of new voice and fax files
- modem clock
- loading all files in the calls-list
- loading all new files in the calls-list
- clearing the modem memory
- setting the modem clock
- setting the modem parameter
- handle voice-calls
- receive faxes
- ring intensity
- go off-hook after x rings
- tollsaver
- maximum recording time
- monitoring while recording incoming message
- fax ID
- remote control enable and disable
- remote control PIN

- no more waittime (shareware memorial seconds)
- Mac: live scrolling in all windows

- Mac: in use serial port is still available (at own risk!)
- Atari: 2-Level- & Self-Mode-Window could be opend from 'Menu for ACCs'

- various bugfixes

I don't know why there is so much complaining about MiNT going on. From what I remember about MagiC 5, the last version I used, it was much like TOS, with some additional features, and faster (to crash;). I remember the configuration wasn't the easiest to understand, having to rely on post from this newsgroup for details on editing the config files. At least the MiNT config file is not all that difficult to figure out, and is well documented. I honestly can not see why someone would not want MiNT installed on their machine. Combined with NAES, it provides a TOS machine with much more girth, simply put. I'm not talking about the full installation of networking, just the simple MiNT in the autofolder, one config file, and NAES.

I did get an update from Woller a while back, but I thought you had that version as well. Am I an update behind? BTW, Woller answered one of my emails a while ago. I sent a change of address. I hope it is filed:'/

> I have never received any replies at all from ASH. Not one single mail. The
> only response I've had was when critisized them directly here in c.s.a.s.
> (and then it wasn't ASH, but Andreas Kromke who mailed me).

Andreas is easy to get a rouse out of. Just complain about MagiC:). I however found Volker to be very responsive on several occasions. He resolved a problem I had with software I had purchased from Toad computers, software that System Solutions wasn't really interested in updating (which was sold by them in the first place). He has also replied on a few other occasions, but I haven't had the need for any real ongoing support, so the little might seem

like a lot to me.

>
> Same with Aixit, I mailed them several times re. their aixTT, but never got

I did manage to purchase an AxiTT card a couple of years ago, but it wasn't
easy. They ended up confirming the purchase through this newsgroup, and I
just happen to spot it. Some users in Germany do not like to purchase from
them either. I wonder if the Falcon TT ram card they offer was ever fixed to
operate at over 40Mhz.......

Yea, even a reply like, got your order, send more money:).

>Pity...

What i say'd here, but anybody (mostly programmers) laughs..
(But i'm shure laughing will stop in a short time period, imeditaly)

I doasn't buy atari software when i can get better releases of mac software
what does exactly the same (or better) for the same money. Have a look
to Mac ColorIt!, have a look to Grafikconverter..

Sorry, but it is what it is, better (and cheaper) software.

Regards, Robert

Crap, thanks for the URL. Now I have to have one! Anyone speak Japanese well enough to carry on a discussion in one of X68K news groups and talk about hardware?

Mike

I think the key word was proportional _system_ font. You can still use
CFN, TTF, AFB, SPD etc proportional fonts in your programs.

The Atari Software eXchange

Updated: Thursday 11th March 1999

All prices are in GBP's.

I am willing to accept US DOLLARS (USD) as well as GB pounds for
Atarian's outside of the UK.

I have the following Atari gear for sale. Prices do not include
postage, please
ring for postage costs etc...

Atari ST Compilation Packs
Atari STE Discovery Xtra Pack,
featuring: Final Fight, Sim City, Escape from the Planet of
the Robot
Monsters, 9 Lives and the Language Disk. 5
Atari 520STE Turbo Pack,
Featuring: STOS, Hyperpaint 2, Music Maker 2, FirST BASIC,
Blood Money,
Anarchy, Human Killing Machine, Impossible Mission,
Dragon's
Breath, Indianna Jones and the Last Crusade, Outrun,
and Super
Cycle. 15

Compilations
3 Each
Top Shots, featuring: Kick Off + Extra Time.

4 Each
Hollywood Collection, featuring: Ghostbusters II, Indiana Jones and
the Last
Crusade & Robocop. No Batman or
instructions.

5 Each
Champions, featuring: Manchester Untied, World Boxing Championship &
Jahangir
Khan Squash. No Box.
Finale, featuring: Overlander, Ghosts 'n' Goblins, Paperboy & Space
Harrier.
TNT, featuring: Xybots, Toobin, APB, Dragon Spirit & hard drivin'.

Star Wars Trilogy, featuring: Star Wars, The Empire Strikes Back &
Return of the
Jedi. NO box.
Mega-lo-Mania & First Samurai.

Adventure, Strategy, Puzzle & Trivia type
1 Each
Spidertronic
Tau-Ceti. No box or instructions.

2 Each
Archipelagos
Crash Garrett
Deflektor
Go-Moku/Renju
Quizam!
Skweek
The Quest for the Time Bird
Tower of Babel

3 Each
Advanced Dundgeons and Dragons 'Heroes of the Lance'. No box.
Borodino
Chess Player 2150
Corporation
Curruption. No Box.
Driller. Including a model of the planets surface.
Dungeon Master Editor. No box.
Dungeon Master Expansion Set #1 - Chaos Strike Back & Utility Disk.
Federation of Free Traders (F.O.F.T.). No box.
Last Ninja 3
Lords of Chaos
Murder
Populous

4 Each
Operation Stealth

5 Each
Dungeon Master
Kings Quest I. No Box.
Kings Quest II. No Box
Kings Quest III. No Box.
Buy all 3 Kings Quest Adventures for 15 inclusive of postage (UK only).
Leasure Suit Larry in 'The Land of the Lounge Lizards'.
*** WARNING ***
Leasure Suit Larry contains ADULT Material. Parental guidance is
suggested.
Shadowlands
Space Quest. No box.
Terrorpods

10 Each
Frontier - Elite II. 1 meg.
Indy - Indianna Jones and the Last Crusade 'The Graphic Adventure' (6
disks).
I've no idea if this needs 1 meg! It comes with The Arcade game as
well.
Populous II. Both 1 meg and 512k versions.

Simulations
2 Each
Hunter Killer

3 Each
Falcon The Mission Disk Volume 1.

5 Each
Battlehawks 1942
Falcon. The F-16 Fighter Simulation. ï¿½7 including Mission disk 1.
Flight of the Intruder. Additional Features for 1 meg owners.
Mig-29 Fulcrum. 1 meg needed.

7.50 Each
Flight Simulator II. Including Western Europe Scenery disk.
Formula One Grand Prix (Microprose)
Gunship

10 Each
Reach for the Skies. 1 meg.
Silent Service II. Requires 1 meg.

Sports
2 Each
Football Director
Hyperbowl. No Box.
Super League Soccer
World Cricket

4 Each
Kick Off 2 + World Cup 90

5 Each
Sensible Soccer. 1992/3 Season Edition. Computer Game of the Year 1993.

10 Each
Championship Manager End of 1994 Season Data up-Date disk.
Comes with Championship Manager (1 meg) and Championship Manager
Italia.
Altogether 8 disks.

Arcade
1 Each
Hard Drivin'. No instructions or box.
Nitro Boost Challenge

2 Each
Alpha Waves
Bad Company
Ballistix
Cabal
Defenders of the Earth
Fast Food. Featuring Dizzy.
Flood
Formula 1 Grand Prix (not Microprose)
Hard Drivin'
Hong Kong Phooey
Mean Machine
Outrun. No instructions, you don't need them.
Popeye 2
Robocop
Steg The Slug
The Light Corridor
Whirligig
Yogi Bear & Friends in the 'Greed Monster'

3 Each
Awesome
Championship Wrestling
Barbarian (Palace). The one with gladiator 'Wolf' on the box.
Barbarian (Psygnosis)
Cap'n Carnage
Captain America. No Box.
Chase HQ II. No Box.
Defender II
Dragon Breed
First Samuri. No Box.
Golden Axe
Harley-Davidson 'The Road to Sturgis'
Hudson Hawk
Impossamole
Mach 3
Menace
Operation Thunderbolt
Operation Wolf
Oxxonian
Prince of Persia
Risky Woods
Robocop 2
Shadow of the Beast
Speedball 2
Spindizzy Worlds
Spitting Image
Star Breaker (Brand New) Still Shrink wrapped.
Star Wars
Switchblade II
Teenage Mutant Hero Turtles

The New Zealand Story
The Simpsons - Bart V's The Space Mutant
The Untouchables
Thunder Blade
Total Recall
Vigilante
Wizkid. No Box.

4 Each
Ghostbusters II
Lotus III

5 Each
Street Fighter II
Millenium 2.2

From: Todd Ahlstrom <todda@xmission.com>
Message-ID: <36E81C2E.13E87E44@xmission.com>
Source record: 82809

I recently found the ST emulators on the Web. I am having a wonderful time reliving my sleepless high school nights with great ST games like Dungeon Master and Oids. I was wondering if anyone knows where I can get maps, spell books for DM. I used to have them years ago when I had my first ST, but I have since discarded them.

Thanks,
Todd

Louis,

I took a Break from the Card.. Started getting a little Ticked off..
I haven't been in the Usenet group in a while, my ISP's news server has been
down for a LONG time! But I have been on the Delphi forums and working on a
new web site (See Below)
```

Thanks again!

Thanks for the information.

How do I obtain MiNT, MagiC or N.AES

Who sells this software?

Thanks

Sean

Hi, With the GESoft driver in place on the hard disk, when the computer is
switched on it boots off a floppy and when reset is pressed it reboots off C
in the hard disk. Before complete booting has occurred options are presented
to choose what auto prgs are to be installed. Does HDDriver do this? Cheers,
Nigel Williamson.

>Hej Johan, oooops! Mistake...

;-)

>I gather you work alone on XaAES too. How about the Fenix stuff? Also a
>solitary job?

While I've been involved in XaAES since it first became a 'public'
project, it took a while before I really started doing anything
significant with it. Anyway, when XaAES was 'officially' declared dead,
I decided to make a revival effort.
Early last summer I spent some considerable time clearing up the most
obvious problems, in the hope that more people would get interested
if they could see that there were real possibilities, and released a
vew version I called beta7+. Since then I've done a few more things
with the program and the latest binary was release around Christmas.

So, for the past year or so I've indeed been alone working on XaAES,
but Craig Graham (the originator of XaAES) put in a _lot_ more time
back when he was still working on it, and a few others were involved
a couple of years ago.
Recently I've been in touch with another person who's currently trying
to come to grips with the code, so hopefully the development will
speed up a little. ;-)

As to the Fenix project, the only part I'm really involved in is the
VDI, but apart from Sven Karlsson's kernel, I don't think there has
been any other development at all so far. :-(

It really is a pity that the Atari community can't make projects like
this work (BAD MOOD is another example (in which I was also deeply
involved (of course ;-)).

I've actually been on the virge of starting up a Mac emulator project
(port of the Amiga ShapeShifter), but after the luke-warm interest
I got from a few probes, I've completely given up on that one. :-(

>I'll see if I can fetch the later version and have time to test it.

Please, wait until I get v0.91beta cleared up.
With a bit of luck that should happen before the end of the week...

Please direct all replies through E-Mail to bensmith@teleport.com or atari@benjamin.net instead of NewsGroups as I do not regularly read NewsGroups.

At Bravo Sierra Computers you'll find Used and New Atari. Items you've been searching for. Item's new to you and Classic Atari long lost. Have you got Hardening of the Ataris? Check out Bravo Sierra Computers! Have you hugged your Atari today? Buy your Atari & yourself a present today! Buy from someone with 16 years of Atari experience. Buy from someone personable, polite & passionate about His Atari! And if I don't have what you want to buy or I don't know the answer to your question, I'll refer you to someone who does. That's the nice thing about the Atari community and my colleauges in the Atari business. We would rather send our business to a fellow competitor to get what they need than have someone abandon their Atari due to lack of support. For myself, I only use Atari! I get on the InterNet with my Atari ST, I use PageSTream for all my DeskTop Publishing, my DataBase is DataManager ST & besides playing games on my Atari ST I play games on my Atari Jaguar with my collection of Jaguar Games! I won't own neither a PC or a Mac. So buy from someone with a servant's Heart & someone who'll be around to offer you Atari support!

<h3>Click for WebSite!</h3>

FREE Catalogs for Classic Atari 8 Bit & Atari ST Computers! Hard-Ware, SoftWare, Books & Accessories! View Atari Catalogs on the Web at http://www.atari.benjamin.net And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to my site at: ftp.teleport.com/vendors/bensmith/ If you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's not an inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or Both! Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can attach text files to your E-Mail. Catalogs are just regular ASCII text files so you can download them into your text editor and view them, edit them or print them out! It would make things easier if you take my Catalogs, load them into your text editor, delete what you don't want and E-Mail me the rest! To expedite things, include your complete Mailing address so I can figure your Shipping/ Postage & Handling. I'll be back after the weekend.

Please Direct all Replies Through E-Mail to: atari@benjamin.net or bensmith@teleport.com. If you can't reach me at benjamin.net see my E-Mail/Web info in my Signature at the Bottom!

Hi,
I haven't used the internal speaker for years, but I seem to recall that the metronome in CAF doesn't sound through it. You need to send the click to a midi unit (double-click on the "click"-button in the lower right corner and set the output to the desired one).

Has anyone out there has used any of the Atari emulators that are available on the PC right now? I have been a long time Atari owner (back to my 800XL), and unfortunately my STFM gave up the ghost some time ago, but I still have the machine and software on floppy - and as I'll be getting a PII 366 soon for my course, I'd love to be able to run all my old software again,, especially GFA Basic 3.Cheers for any help/advice you can give in advance!

You could try SDDRIVER.PRG on a floppy, you switch off the hard drive, boot up with that in Drive A, switch on the hard drive again, then run the program which will install the hard drive and you can deal with any alterations/deletions. I've done this a number of times when a new program has caused the system to crash or go into a loop.

It came as part of a suite of SDManage programs for setting up my
Quantum hard drive some years ago.

> That`s not so, - well, from my experience, the MAC software is a lot more expensive, even the shareware is more expensive on the Mac than on the Atari, and it`s almost imposibble to find any new pd software for the MAC.

I found the same to be true. I have a couple of Macs too, and searching for shareware/PD is a joke. Nothing is new, and except for a few applications, are quite expensive compaired to the TOS (and only:) world. Commercial applications are WAY over priced. Updates to them cost as much as MagiC-NAES-Photoline and NeoN combined!

> I am not counting the PC world, where everybody is stealing/pirating software from everubody.

:). It's kind of like watching Night of the Living Dead. Everybody is eating everyone else.

>
> >In a nutshell, many Atari developpers are shooting themselves in the foot.
>
> I don`t mind paying for software upgrades at the price ASH charges for upgrades, one doesn`t need to get every upgrade. I was even considering buying FREEWAY for the MAC. It`s cheap when you are a "power-user", a lot less than if I get it from a Danish Mac supplyer.

Right, If you go through the trouble to become a "power-user" (quite hard from the U.S:), upgrade cost are quite reasonable. The hard part is keeping up with them all. I still haven't installed the latest German version of MagiC Mac. The latest NVDI is still setting in my desk. Kobold however (V3.5) works bitchen:). I know I have the latest version of CAB and the update as well, but I don't think I ever installed the update, or even know what it is for.

The BBS isn't to bad to use if you have a friend that speaks German to help out and registers you, and downloads are quite fast. I don't having to register every six months, but I guess that protects them in some way.

Could be a lot worse.

Mike

>
Hi Rob, it's been some time... Still not able to get the card working?
It's a 1208, Matrix never made 1203's...

The 9-pin socket lay-out is:

PIN 1 = red analog
PIN 2 = green analog
PIN 3 = blue analog
PIN 4 = H-sync
PIN 5 = V-sync
PIN 6 = GND
PIN 7 = GND
PIN 8 = GND
PIN 9 = GND

MSA is already a compressed format, so it sounds like that MSA might be for a 1.44M disk. Anyway, there is a utility somewhere that converts MSA to ST and vice versa on the PC. I don't know where though. You should have a look at some ST emulation pages.

You could copy it over to a ramdisk on the Atari with a Parcp or ghostlink and then run MSA, but you'll need at least 2Mb of RAM of course.

Let me try to understand. Netscape is free, IE is free. So ASH is "shooting
themselves in the foot" because they charge money for CAB?

How about a reality check? If you want to make a living out of software
development, you have to charge money -- unless you're sponsored by somebody.
And prices in the Atari market probably will never be able to compete with
prices for Windows software, because the target market is MUCH smaller.

4413. Re: Atari Online News, Etc. #0101

Newsgroup: comp.sys.atari.st
Date: 1999-03-11 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36E779C9.7284@geocities.com>
Source record: 82875

Hello gentlemen,

I have not looked at the A-ONE magazine, but being the editor of the Atari Newsletter for Dallas, Texas, AUNT BYTES, I can say that I have found in this day and age that there are all sorts of directions you can go with a Atari publication.

We have been strictly a ST group for 13 years... and now this year started opening our eyes to ALL things Atari (though we are a ST group with quite a few TT users mixed in with a Hades and C-Lab Falcon user). Even before this year, many things were touched on... developments in the ST world, developments in local computer news, people's experience with Atari, people's views of other platform's developments (usually mixed in with a Atari viewpoint). Plus we had sci-fi stories in there from some of our members. It's fun to look at the back issues. Hell, it's fun to look at the current issues!

The point is, the writers of A-ONE *ARE* Atari users. Atari serves a purpose in the REAL WORLD talking about issues other than Atari, and shows the world that Atari still has a footing amounst everyone else. We are not just geeks with a weird platform. We are regular people using a computer. The fact that a Atari is used to make a newsletter about anything other than Atari says a lot about the platform.

Recently the Atari Users of North Texas held a Y2K discussion on our website. The chat room was packed with Atari users, PC users.. who knows how many were there... our website activity monitor only shows ten at any given time, and we at least had ten.

For Alan Campbell, our Y2k speaker, and the others there, they had a great time on a ATARI related chatroom. Why would Atarians be concerned about Y2K since 8-bits are uneffected and ST's don't have problems until 2017 or so? Because we live in a REAL WORLD with REAL PROBLEMS outside our own desktops. The Atari may keep working, but what about the computer setup at your bank?

So there you go. I think newsletters should supply just that...
...news.

And if a Atari platform makes that happen.. awesome!

You are. I have been running fVDI under everything except MiNT. I'm not
sure if anyone has actaully tried it under MiNT. It works with TOS and
MagiC and it should work under MiNT as well. Don't worry, it will work
on everything you want.

Ehhhh??? If they don't know how to do this, I wont buy anything from them.
Doing a VME<->PCI bridge is one of the most simple thing you can do. You
can even go out and buy a chip in the store which does all this for you.

4418. Newton's Atari?

Newsgroup: comp.sys.atari.st
Date: 1999-03-11 00:00:00 UTC
From: xav@compsoc.man.ac.uk
Message-ID: <7c7oj5$7ie$1@roch.zetnet.co.uk>
Source record: 82880

Note that this is pretty much OFF TOPIC (and LOOONG) for an Atari newsgroup, but I felt
compelled to reply anyway, so you might want to skip this post (or I might have intrigued you enough to read on ;)

In a former life as an exotic dancer, Doctor Clu <clu-da-bard@geocities.com> wrote:
> So I was wondering what has been done so far to connect a Newton MessagePad and a Atari ST.
>

For those of you who have little idea about what a Newton is, or more probably still think they're like the first model in 1994, I just thought I'd share my experiences with you:-

I bought my first Newton (a nNewton 100, one of the earlier models) in 1997 when a load of them were going cheap (�40) in Manchester (probably fallen off the back of an apple cart ;)

Although the handwriting recognition was ropey, it was still far better than I expected it to be (bearing in mind I'm left handed). Furthermore, it proved to me that I would genuinely find a PDA (personal digital assistant) useful. Having tried with various lesser machines over the years, this came as something of a revelatiom to me.

As soon as I could afford to, therefore, I went shopping for a new PDA. I tried the Psions (series 3 and 5), I tried the Wince machines (V1 at the time),
I tried the Palm Pilot, and I tried the (then new) Newton 2100. The Pilot scored quite well, and had I never used a Newton, I might have gone for it, but frankly its functionality was less than the MP100 I was trying to replace.

I decided to go for the 2100, and have never looked back. I admit, it was a pricey machine, but then it gets far more use than my desktop machines, each of which cost the same or more at the time. The form factor's a bit on
the large side, and had they ever released a Pilot sixed Newt, I (together with many other Newton owners) would have snapped one up _in addition_ to the 2100.

So what's so great about it? Well, in hardware terms it's got a couple of PCMCIA card slots (in one I have a modem, in the otheradditional memory), IrDA port (which I use to print to the HP Laser at work), serial port(s) and
large touch sensitive LCD screen - which is the primary form of input. There's a pen in a spring loaded chamber in the case, and an integral protective

cover
that folds right back (unlike the Palm III's). There's also a mic, speaker
and battery compartment.

On a fresh set of AA batteries, with no modem use, I get about 20 hours
continuous use. This equates to about 3 weeks (for me) of practical
day-to-day use. I usually use the rechargeable battery, though, which gives
me about 3-5 days with modem use. And it charges in an hour. The charger
is
beautiful: very slimline, and with swappable fittings to suit all major types
of mains sockets, so I can use it just about anywhere in the world. In case
of extreme emergency I also have a solar panel for it ;)

The real beauty of the Newton, however, is its software. The interface is
perfect for a handheld device, and does not rely on the desktop metaphor
of
Mac, Windows or even Atari. Until you use one, it's hard to comprehend how
different it is, but trust me, it's ideal for the job. The whole system is
highly object oriented, using its own programming language (tools freely
downloadable) which uses an ingenious form of inheritance to keep memory
requirements low, and which means that it's quite easy to hook into any part
of the OS - or even another application. Data sharing is allowed which means
that you rarely (if ever) have to enter the same information into more than
one application (i.e. names & addresses).

The flexibility of the OS has meant that there are lots of extensions to
the basic system, some adding just one or two elements of functionality,
some
completely replacing entire parts of the system. Oh, and the handwriting
recognition on the 2100 is light years ahead of the original.

In use, it's highly intuitive and simple. I remember giving my fax number
to a Wince 2.0 owner a few months back, and in the time it took him to open
Pocket Outlook, find my file and tap in the new data, I'd updated the whole
of his address in my Newton, and was well into reading my mail.

Mail? Yup. Every morning at 6:30 the Newton wakes up, fires up an alarm clock,
and wakes me from my slumbers (it's a damned loud alarm clock, too). I reach
over, flick the power switch, and the alarm clock snoozes for half an hour.
Ten minutes later it wakes up again, connects to zetnet, picks up my mail
and news (and web pages, if I've scheduled any for download), disconnects,
then goes back to sleep. Atr 7:00 the alarm clock goes off again, and I can
lie in bed reading my mail.

Other than that, it contains a very capable word processor (and it has a
lovely (optional) external keyboard) - which I've written several AC articles
on - a spreadsheet, drawing package, graphical calculator, various games
(chess, backgammon, risk, to name but a few), a load of classic books
(Frankenstein, Flatland, Jekyll & Hyde, and hundreds more available) the
expected address book, notepad, dates, timezones, formulae, web browser,
ftp,
telnet, etc., etc., etc. And there's a speech synthesizer which can read

out
the text from virtually any source (I sometimes get it to read my news or mail to me, and it tells me the name of an appointment, rather than just bleeping). Oh, and there's a 12 operator FM synth built in, and even some MIDI apps for the musicians amongst you.

Anyway, that's enough about the machine - though I could go on for ages. BTW, this reply has been written on the Newt. If anyone has any questions, feel free to ask me.

As for the question that the previous poster actually asked, I'm not aware of any Atari software, but there is Linux software which you could probably recompile for MiNT. In addition, on the Newt itself, Steve Weyer's "Sloup" application is often cited as a means of backing up the Newts soups (data storage structures) to any terminal software on another machine.

Oooh, that reminds me. Soups. This is the last thing, honest. But you programmers might find this one interesting; all data storage is in Soups which are freeform databases that can contain any combination of data formats. Items are not stored as "files", but are indexed by queries - just like you would in a database like Access, or an SQL system. This makes them very flexible, and virtually all Newt apps will survive perfectly well if their data is split across physical storage locations (some internal, some on cards) - even if a card is ejected whilst the app is running (roughly the equivalent of simultaneously pulling RAM chips out of a desktop machine whilst removing some of the hard drive platters!). There's also no concept of loading and saving - everything you do is saved as you do it - even if the power dies, or you switch the machine off. Flick it on, and you're right back where you left it.

Anyway, apologuies for the long post; I hope some of you found it interesting.

The maximum nested folders allowed under ISO9960 is eight... this may sound
like a lot, but in fact isn't: DTP
>

I've only been half following this thread, so this might be irrelevant, but...

Assuming Hallvard wants to write the CD simply to back up some existing files,
I'd recommend creating one or more TAR files of them (or ZIPs if you prefer).
This will allow you to preserve long filenames, where relevant, and the
directory structure, provided the TAR you create has an ISO 9660 compatible
filename, and isn't nested too deeply.

Depending on how much time you want to spend on this, you could just tar
the whole directory structure, or create separate tars for various parts.

This was exactly the method I used to use to upload my web pages. I'd write
them on a MiNT system with long filenames, but had to upload them to the Unix
server via a win 3.1 machine. As this intermediate could only handle 8.3 format
filenames, I just tar'd the files at my end, and detar'd them once I'd uploaded
them. And Bill Gates thought he'd foiled me with that one...

Well I only heard a lot of bitchin' about how MiNT sucks until you was asked
directly if you had contacted the developer.

> >Anyway, the non-existing support from companies like ASH, Woller and Aixit
> >is why I don't have any faith in the commercial Atari-market anymore.
> At least they are polite enough to answer ones email, and do You really think

They are? Konstantin Woller answers something like 5% of my mails to him, and
despite his promise two months ago he has not yet mailed me the N.AES-update.
I have never received any replies at all from ASH. Not one single mail. The
only response I've had was when critisized them directly here in c.s.a.s.
(and then it wasn't ASH, but Andreas Kromke who mailed me).

Same with Aixit, I mailed them several times re. their aixTT, but never got
any answers. Considering some rather horrible stories I've heard about them
(hi Martin and Mario!) I didn't take any chances and ordered the card through
a Scandinavian dealer. It doubled my costs but I think it was worth it...

> support is that much better on other platforms ?

On Mac and Windows - definitely. When I contact Adobe or MS I always atleast
get a reply, even though it's not always useful...

> In the maus newsgroups you'll nearly always get a reply from Woller or
> someone from ASH.

If they can do that why don't they reply to private mails? When they have
their email-addresses on their web-sites and encourages people to mail them
they should also have the decency to reply as well. Even a automated "We will
get back to you later"-reply is way better than total silence.

> the TOS market/users in mind, and thats the key element to me...
>

We over at AUNT are talking about this ever so often. We got emulators running. We have found two schools of thought.

1) hardware is the body. The operating system is the brain. Take a PC, which is just a computer to run a program and throw a TOS emulator in there, and suddenly it thinks it's an Atari. :) You could conceivablely throw a fuji on the machine and call it a REALLY FAST TOS box.

We in the Atari 8-bit world have a saying since the Atari 8-bit have survived quite well using PC's with a APE cable to make use of the harddrive and faster modem connections. The saying is, "As long as we don't have to see windows..."

2) The true fun in the Atari world, for the platform, as a hobby, is getting a Atari platform machine to run, keeping it running, and continueing to make it do what you need. For this reason, apps and programs are written, and Atari becomes a unique platform. You could run a program at 5800 % of the speed of a TT, but what is that?
Emulators are like training wheels. You use them to learn abot the ST platform and to be introduced to it. But in time, you loose the training wheels and get a REAL ST. It may take time, and you might have to ship items across "The pond", but in the end, you will have a computer virtually untainted by microsoft, unique, and still does many needs of a computer quite well. It is by using a true Atari and a Atari-clone (Hades, Milan, etc) that the platform has life and support. Without that support and devotion, the platform would not have a purpose to continue.

As for me, I'm currently a Macintosh user (great machine BTW) and I could run MagicMac... the demo was pretty good. But I want to get into a high end Atari and enjoy this alternate platform for however long it lasts.

Considering the popularity of the Milan, the C-Lab, and all the other ones being manufactured... looks like this playform has a lot of life left.

In summary, ANY piece of hardware becomes the operating system that is running (for example, think of all the "Mac users" that were little more than ST owners with a Mac emulator...) PC's and Mac have shown to be exceptional light speed Atari EMULATORS. Nevertheless, they are machines with their own operating system and support software.
True kudos (and a extra star I guess you could say) go to the hardware DEVOTED to the TOS platform. To put it simply, it takes a special kind of Atarian/computer user to use a ATARI SPECIFIC machine.

Aspiring high end Atari user,

Doctor Clu

This machine was IIRC only available in Japan, but you're right - it's cool!
I would gladly trade my TT for just the X68030 case :-) I'm an old Sharp-man
(my first ever computer was a MZ720) and I remember drooling over the
X-series just before I bought my first ST and got hooked on that instead.

There is some stuff about it at "The museum for dead, gone and obsolete
computers" (http://www.computingmuseum.com/).

4427. Jag Catbox sc1224 adaptor...help!

Newsgroup: comp.sys.atari.st
Date: 1999-03-11 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <36E7AB2F.1039@primenet.com>
Source record: 82889

I am soooo angry. I wasted a bunch of time and money ordering a
Catbox from the UK (mainly to hook up to an Atari sc1224 monitor) just
to find out that the once easy to find SC1224 monitor adaptors are about
the hardest possible thing to find on Earth (the UK place didn't have
them).
Does anyone know either a possible place to get one, or if not then
to hell with it and let me know if there are schematics anywhere for
building one and I'll make the damned thing myself. Thanks.

p.s. the B and C electronics Redmond Cable adaptor only works with a
certain type of Atari monitor that I don't have...so I don't want to
mess with that.

The CAB foray into MAC territory in the shape of iCAB goes from strength to strength. See the article in MacWEEK at:

http://macweek.zdnet.com/1999/03/07/germanywed.html

50,000 downloads of the test out version already!!!

Wonder if we humble Atari/Falcon users will get any of the added features (I know that we haven't got the Java engine and any way from the number of errors made in the language as detected by Netscape, I don't think we are missing much).

As with all things TOS/Atari verses PC/MAC it's a case of 'never mind the width, feel the quality'!

I downloaded a program from K.Ellis site called "Freegem."

After booting it up it gave me a message that I needed to have AES
4.1.

Also the new version of MyMail gave me a similar message when I was
checking it out.

What is this,and how do I obtain it to upgrade my Falcon.

Thanks!

I have had Avalon,it does not work on a Falcon.

The program key only works on the ST/STe computers.

If you try to load it on a Falcon you get a message that says," 'bye
no key."

It's a shame because it is a good sample editor.If they had taken some
of the features of Recycle,they would have had a very powerful program
similar to Zero-X.

4432. TAF Meeting March 17th - NVDI 5 Demonstration

Newsgroup: comp.sys.atari.st
Date: 1999-03-11 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <36e7d288.0@nemo.idirect.com>
Source record: 82894
Cross-posted to: comp.sys.atari.st,comp.sys.atari.advocacy,alt.atari

Agenda for the Wednsday, March 17th, 1999, meeting of the Toronto Atari Federation:

Are you considering migrating to another computer platform because you can't find drivers for the new inkjet and laser printers on the market? Have you had it with GDOS and its bitmapped fonts, and want to use the many Postscript Type 1, TrueType and Speedo vector fonts out there for your projects? Or are you craving for some system speed in the video output of your classic ST?

Then this upcoming TAF meeting may well be right up your alley - for we'll be doing a hands-on demonstration of the Behne Brothers' newest version of their screen accelerator/font handler! Now at version 5, NVDI optimizes the ST/TT/Falcon/TOS clones' video output for faster screen redrawing and updates, as well as acting as a superior font handling package that opens up the many public domain and commercial fonts enjoyed by Mac and PC users for use in many of the ST's word processor and art packages. PLUS! This new version of NVDI offers literally dozens of new printer drivers, including ones for the latest offerings from Hewlett-Packard, Canon and Epson. AND! If you're a user of a third-party graphics card, or use the MagiCMac and MagiCPC emulators. you'll be pleased to know that NVDI now no longer requires a special version to be installed...

We'll also be testing output from some of the many Atari programs that can make use of NVDI 5, utilizing a donated HP DeskJet 540, so you can see the results for yourself.

If printed output is your specialty, if you've been drooling over printers like the Epson 740, or if you want to put some spark in the ol' dog, the demo of NVDI was tailored especially for you! See you there!

TORONTO ATARI FEDERATION meetings are held on the third Wednsday of the month in the North York Memorial Community Hall on the lower (or concourse) level of the North York Civic Library at 5110 Yonge Street at Parkholme Avenue. Public transport users can take the TTC's Yonge-University-Spadina line to North York Centre Station.

Meetings start at 7:00 PM; admission for non-members is $2. A one-year membership is $25 CDN a year, which includes a subscription to the club newsletter PHOENIX and full use of the TAF BBS. TAF membership IS Atari support!

TAF Info: - 416-533-0504 or 416-766-4743
TAF Online! BBS - 416-421-8999 [8-N-1] now open to ALL Atarians

TAF Internet WEb Page - http://welcome.to/taf or http://taf.atari.org
TAF e-mail contact - dreibel@idirect.com or anarkist@idirect.com

Han,

You'll need to upgrade to TOS 3.06 and upgrade the FD1772 drive controller chip to the newer AJAX controller, if you haven't already done so on your system. Also, you'll have to toggle the dip switch that allows formatting of a 1.44mb floppy. If you can find an Epson SMD-340 HD floppy, its an exact fit and will accept the Atari-specific faceplate and eject button from your old floppy. The jumpers on the 1.44 mb floppy will also have to be reset for the TT030.

1. Buy FD.
2. Plug it in.
3. Switch on the TT and enjoy the new FD :-)

The only problem I can think of is that some newer floppydrives are
hardcoded to ID 1, to avoid soldering you should get one which can be
jumpered to ID 0.

I don't have an Ajax in my TT but 1.44 still works without any problems
at all.

Oh, you'll probably have to hack either the case or the front/button of
the FD as well.

From: atarist@xs4all.nl
Message-ID: <7cbq11$7as$1@news2.xs4all.nl>
Source record: 82752

I have been quit about the MiNT CD Mint98.

Have contact now with Bernd but no reaction to e-mail to Axel.

Today I did try and I am much further now.

The problem was: some nasty messages that I thought were important
seem not to be that.

I installed n.aes and desktop Thing and it seems that without that no
adminstration of network capabilities is possible.

The complaint of the ready-installed CAB 1.5 about 'home.html not
found' I solved by a drag&drop of that file to cab.
Then I could type in the right url and the administration part
started without trouble.

I can set up the network!
Only reading manuals is urgently needed I think to know what I am
doing.

But:....
suddenly the sun comes from behind the clouds. Not seen for a long
time. And the temperatuur outside is rising to a record 12 C.

A sudden outbreak of SPRING.

I go and sit in the sun.

I have the following items for sale!
Mega St 2. 2 Megs Ram, Mouse & keyboard $75
Falcon 030 with fpu, 810 Megs Hard Drive & zram 14meg upgrade (Bid on this until 25 March Highest bidders wins)

Send e-mail to Maurice0515@my-dejanews.com or Mobie@yahoo.com

Thanks I must sell these item ASAP

Moe

4445. Re: Struggling through MiNT chaos

Newsgroup: comp.sys.atari.st
Date: 1999-03-12 00:00:00 UTC
From: vdjole@EUnet.yu
Message-ID: <7cbvl1qpd1@SOLAIR2.EUnet.yu>
Source record: 82757

Well, I am getting used to this thing slowly, and I come with new questions:

On 10 Mar 1999 10:48:13 , joska@nuts.edu wrote:
>In article <7c4ededou4@SOLAIR2.EUnet.yu>,
> vdjole@EUnet.yu (Djordje Vukovic) wrote:

>> just a matter of taste, please, don't spit on me.
>
>You don't *have* to use Thing.

But SOME sort of desktop would be needed for comfortable work; N-AES
does not have one? And I understood that N-AES and Thing are especially
tuned to fit together?

>> * It seems that it is almost impossible to install MiNT if you don't

>Well, the beta-kernels are packed with gzip, but I have seen "production-
>kernels" packed with zip and lzh. It depends on what you're looking for. And
>FIY, neither tar nor gzip are MiNT-only, they work under TOS or MagiC as well.

Unfortunately, I deleted the thread "Compression sucks..." from my
offline newsbase, and I have no patience to look on the net again. If I
remember correctly, Henk did not refer directly to tar/gzip but said
that he would like something be done automatically when he downloaded Mint
archives, and someone suggested him to use Mint<something>...

>> be comfortably viewed until MinNT is there (though some editors can
>> cope with this).
>
>TOS' built-in viewer is the only one I know of which doesn't handle these, but
>I agree that these files should be CR/LF-formatted.

I do not quite see the wisdom of this LF-only MiNT convention. I KNOW
that this is Unix standard. But it is also contrary to the complete
heritage of software and online documentation on Atari/TOS. And any Unix
applications ported to MiNT have to be recompiled and adjusted anyway;
I guess that most text I/O would be done on a per-record basis through
a call of some C function or other, which may as well follow the
TOS CR-LF conventions?

Btw. I think one uses an Atari mostly for its Atari-specific charms. If
one wants to run as-real-as-possible-Unix, that can probably be done
simpler and more efficiently on another type of machine.

>> * It seems that the MiNT-keepers would oblige Atarihood very much if,
>> instead of making a new port of application XYZ from Unix to MiNT,
>> they made a foolproof installation program, made satisfactory
>
>The "problem" is that MiNT (i.e. the kernel itself and the additional tools)
>are so flexible and comprehensive that it's near impossible to write a wizard
>for everything.

It may be so. But the hardest thing is to get started at all. So some
installation wizard would be welcome to set-up a minimum installation
automatically. As the user gets to know his way around this, he would
probably figure how to continue for a full setup tuned to his wishes.

Consider this, for example: I have read here that the KGMD/KEMD installation
is simple. So I download the KEMD_R2 and KGMD archives. I unpack KEMD,
find that there is GEM.SYS inside, and I find instructions are INDEED
VERY SIMPLE to follow, but I have to unpack KGMD (very well), and then
I have to download two complete directories from nic.funet.fi (a lot of
large files with names that tell me nothing); after I do that, I have to
devote a complete, rather large partition to MiNT and run an installation
program that will put a lot of files on the this partition. Then I will
be able to copy MINT.PRG from some folder on that partition into AUTO
folder on my boot drive and have available MINT.PRG+GEM.SYS which is
about all I wanted for a quick start in MiNT.

I do not feel inclined to re-partition my disk right now, so I abandon
this "simple" aproach and experiment by downloading a couple of archives
containing several versions of binaries of MINT.PRG. I get the
setup to work. Some time later I divine telepathically that the install
program KGMDINST.TOS (which I had from the beginning) seems to be MINT.PRG
itself, though a somewhat obsolete version.

Meanwhile, I read docs I collected from all those files that I downloaded,
and find them rather incomplete and not up-to-date, apart from showing me
that MiNT is quite a serious system, worth knowing and using.

>> * AES4.1 is multilingual and, therefore, quite large. I understand that real
>> "MultiTOS" uses AES4.0; which it smaller, faster, more or reliable?
>
>It's neither :-) It's bulky, extremely slow and notoriously unreliable. I
>still can't understand how Atari could ship such a crappy product. It really,
>really sucks.

So if I use some newer FreeMiNT MINT.PRG and AES 4.1 GEM.SYS that would be
better than using the "real" MultiTos pack? Is there some other version
of GEM.SYS that would work better (i.e. faster but reliably) than this
AES4.1 and have a similar feel?

>> * Is it possible (without being a hacker guru) to edit AES4.1 like there
>> are tools to edit TOS2.06 and 3.06- to remove multilingual balast,

>> edit resources (limit on number of desktop icons is quite small, and some

>
>I'm no 4.1-guru, but I know that it can load external resources which can be
>edited with a normal resource-editor. I'm afraid I don't know anything about
>the format of this.

Ihe first time I successfully started MiNT with AES 4.1 it immediately
recognized my complete TOS 2.06 setup from NEWDESK.INF and DESKICON.RSC
(which delighted me quite a lot). Is it possible to make it load
other resource files, too (i.e. for changing the menus and dialogs)? And how?

>You can save a lot of memory by ditching the internal desktop and use
>something like Gemini instead.

But how, as the dekstop is integral with AES here- it would remain in memory?
Besides, I quite like this "TOS-original" desktop (a matter of taste).
I would rather ditch the german, french, spanish etc. desktop from the file
in order to make it smaller.

>> * Some older programs won't run in the setup that I have made. I would
>> particularly like to be able to run Megapaint- at the moment it won't go.

>> from NAES/Thing- in "single" mode, but is it possible to start it from
>> AES 4.1?
>
>I don't have Megapaint, but it sounds like a bug in the GEM.SYS-beta you use
>since it works with N.AES.
>

I will rephrase my question to be more general: I have found that the said
Megapaint will work in N-AES/Thing and also in Magic but only in "single"
mode (on both systems). Can this "single" mode of running a program be
achieved with AES.4.1, and how?

>If you don't use these devices though, but only use programs that use RSVF
>directly you can safely run HS-Modem after MiNT. Beware of conflicts though,
>you should never mix the two kinds of programs! If you can then you should
>only use programs that access the serial-ports through MiNT's devices, since
>these can be locked to prevent confusion if two programs tries to access the
>same port at the same time.

Obviously, I'll have to experiment a little. So far, I have found out
that Cab + iConnect seem to work.

>> * The MINTSETT accessory shows a field named "AV-server" which is grayed-out.
>> Is it possible to make this protocol active under AES4.1, and how?
>
>It's greyed-out because you don't have an AV-server installed. Jinnee, Gemini
>and Thing are all AV-servers, Thing is currently the best. Both Jinnee and
>Thing use an awful lot of memory though, but you should give Gemini a try.
>
>Most modern software relies on the presence of an AV-server for many things,

>and your system will definitely work smoother with one installed.

I will rephrase: is it possible to keep the AES4.1's original desktop and have an AV-server by loading some resident utility with this singular functionality?

>> advantage in using MiNT over TOS2.06 vs. TOS1.4 or would I just be
>> wasting memory?
>
>With the newer 1.15-kernels you are basically just wasting memory, since
>you're only using the (X)BIOS-parts of it anyway and 1.04 has a pretty solid
>(X)BIOS.

It seems that an application can be aware which TOS is in MiNT's roots (at least SYSINFO reports TOS 1.4 and 2.06 in these two cases). I hope that it would not cause problems if I use V1.4...

I have a new question: When I load MultiTOS-like MiNT+AES4.1, the fonts made available by NVDI (V4.11) get completely confused and if a non-system font is selected, garbaged characters are displayed in dekstop windows. Why, and is there a way to correct this? Applications get fonts correctly.

Kare.hampf@pp.inet.fi (K. Hampf) wrote:

>though.

We have just read in this same newsgroup some sad stories about installing MiNT from that CD.

My first impression is that MiNT+AES4.1 (I've got so far for the moment) work rather slowly but quite reliably. I was able to crash it a couple of times but only by messing up the setup and then running some program which it didn't like, and this was a repeatable event. On the other hand, I have had an uncomfortable experience with Magic 5.1 which was much faster but collapsed all of a sudden at any time much more often than I liked. I do not have the knowledge to do that myself, but I have the feeling that by shredding and patching the AES4.1 GEM.SYS file a little, replacing some time-critical routines, a quite nice and fast multitasking, and very TOS-compatible AES might be produced. Though, with everybody liking Thing so much, it seems unlikely this will ever be done.

Btw. I find it quite strange that some users find Magic a very stable system and they can't get Mint+etc to work reliably, while with some other

users it is quite the opposite. Obviously it depends a lot on the whole user's working environment- and it does not speak very favorably about any of these two systems. A decent OS must not be crashed by anything a user or an application might do. Maybe some sort of conflict-catcher utility, like the one that exists on Macs, might be possible and useful (if there is somebody to write it)...

Thanks to everybody for any given and future help. I appologize for the fact that all my posts seem to get quite long...

Cu.

Euch, here in Deerlijk (near Lille, France) it was around 17 C today.
At my computer room it's already 24 C without any additional heating.

>I go and sit in the sun.

Lucky guy you're. I had to work today until 17.00.

There's not much N.AES-specific in Thing, so you can just as well use
e.g. Gemini.

> I do not quite see the wisdom of this LF-only MiNT convention. I KNOW

This was recently discussed on the MiNTlist, but it was rejected. I
really didn't follow that thread closely, but the arguments seemed
very reasonable.

Ofcourse, there's nothing that stops us from distributing the
read.me-files with CR/LF apart from lazyness...

> Btw. I think one uses an Atari mostly for its Atari-specific charms. If

MiNT'98 is an attempt at this, the same was MD, TAF, KGMD etc...

> program that will put a lot of files on the this partition. Then I will
> be able to copy MINT.PRG from some folder on that partition into AUTO
> folder on my boot drive and have available MINT.PRG+GEM.SYS which is

You didn't need all that, mint.prg + gem.sys (and their respective
configuration-files, mint.cnf and gem.cnf) is all you need.

> So if I use some newer FreeMiNT MINT.PRG and AES 4.1 GEM.SYS that would be
> better than using the "real" MultiTos pack? Is there some other version

Much better. Remember that it's a beta though (Atari never finished it),
but it's still a lot faster and more stabler than the released version.
It's actually rather good.

> of GEM.SYS that would work better (i.e. faster but reliably) than this
> AES4.1 and have a similar feel?

Yes, N.AES. It's commercial though. You can find some more info at....

http://atari.nvg.org/n.aes/

> (which delighted me quite a lot). Is it possible to make it load
> other resource files, too (i.e. for changing the menus and dialogs)? And how?

It is, but I have never done so I can't say exactly *how* :-(I have been
using N.AES for most of my 'MiNT-career'.

>>You can save a lot of memory by ditching the internal desktop and use
>>something like Gemini instead.

> But how, as the dekstop is integral with AES here- it would remain in memory?

Probably because it don't get initialised.

> Besides, I quite like this "TOS-original" desktop (a matter of taste).

Beware that there are several problems with it. The two most serious flaws
is that it doesn't understand the AV-protocol (*very* handy) and that
neither the desktop nor the fileselector handles long filenames.

> I will rephrase my question to be more general: I have found that the said

Sorry, I don't know if this is possible.

> Obviously, I'll have to experiment a little. So far, I have found out

:-) iConnect under MultiTOS? It took me two days to get it working under
N.AES, but never got it really stable.

Possibly, but the only separate AV-server I've heard of is an extension to
MagXdesk and I would be surprised if it worked with anything else. You can
try it, I beleive you can find it on Bengy's MagiC-page at...

http://bengy.atari.org/

> It seems that an application can be aware which TOS is in MiNT's roots

I really doubt that, but if you do get problems you can always revert to
the disk-loaded 2.06.

Do you have a Falcon? I had similar problems with MagiC on my own Falcon,
in the end I lost faith in it and gave it up. Later versions are reported
to work a lot better, but I never managed to install MagiC6 on my Falcon
(halted during booting and complained about missing screen-drivers) so I
installed it on my TT instead.

> so much, it seems unlikely this will ever be done.

Thing is separate from the AES, so that has nothing to do with it. It's
probably easier to put some effort into oAESis or XaAES than hacking
through a 300Kb binary. Also, most MiNTers seems to be using N.AES these
days, and it sounds like this is what you need.

> Btw. I find it quite strange that some users find Magic a very stable
> system and they can't get Mint+etc to work reliably, while with some other
> users it is quite the opposite. Obviously it depends a lot on the whole

Some Falcons (like mine) totally refuses to run MagiC reliably, I guess
that's why this situation has arised.

> of these two systems. A decent OS must not be crashed by anything a
> user or an application might do. Maybe some sort of conflict-catcher

I have been debugging some USERDEFs for six straight hours now without one
single reboot :-) There's not many AESes that survives repeated bus-errors
and stack overflows in USERDEFs... OTOH I can easily take down the entire
system simply by forgetting to turn off the 040 writeback-cache when
loading ImageCopy...

>I can see if it fits without gutting my STe?

Why not leave the keyboard in the original plactic case & just extend the
internal keyboard lead. I've done this, 2 metres is no problem. Use serial
port cable & put a DIN connector on the rackmount panel so you can detach the
keyboard for transport..

That will take care of the mouse too.

If you want, you can hack the plactic case & cut it off just where the
keyboard ends. Fit a piece of plastic to cover the gash.

As for the board dimensions, as a rough guide, the motherboard fills the STE
case completly, except for a small cutout near the mouse/joystick ports.

If you can fit the STE in the rackmount case, then the board will fit.

If you are considering adding hard disks, etc, then get a PC PSU, as the STE
PSU is not up to the job of powering lots of peripherals.

>
>http://www.bpwl.com/ar/emulator/5200/

Well, if it's the same as the other one I've tried (called ATARI802 with a Falcon-specific version) then it's not very useful. This one (ATARI802) will indeed load ATR files (ie. games), but the emulation is so pathetically slow that it is unuseable. I'll check that site out though, thanks.

Source record: 82831

esc a ï¿½crit :
>
> Thanks for the information.
>
> How do I obtain MiNT, MagiC or N.AES

MiNT is freeware. You "just" have to get your hands on a distribution
kit. Try ftp.funet.fi for the KGMD/KEMD kit. There was also a TAF kit.
These give you a unix-like environment with a GEM front-end, which is
pretty neat, but you need lots of RAM and a HD. The old MultiTOS kit
that came with some Falcon is apparently still copyrighted and can't be
distributed for some reason.

MagiC and N.AES are both commercial. N.AES actually included MINT. MagiC
is a replacement OS, easier to install, but less compatible and less
"hackable" (Will I get flamed for saying this?).

>

Rob,

pin assignment for the regular SVGA 15 pin connector:

pin 1 = red video
pin 2 = green video
pin 3 = blue video
pin 4 = ground
pin 5 = ground
pin 6 = red ground
pin 7 = green ground
pin 8 = blue ground
pin 9 = NC (no connection)
pin 10 = sync ground
pin 11 = ground
pin 12 = NC
pin 13 = H sync
pin 14 = V sync
pin 15 = NC

HTH again :-)

>wonder if someone knows a way to get rite of that McSn cookie.

I gues you can't have it both ways, one thing you could try it so substitute
GEMJING for another sample/soundplayer.
PHPLAYER by William Wong is such a program and according to the docs is also
compatible with Gemjing (commandline). Under MiNT the player needs to have
Super/Global access to memory so that flag has to be set. I don't know if
this is a problem
download from http://probehouse.atari.org

Cheers from Belgium

Dennis

Great news Dan. I let my membership lapse a while back since I was
never able to attend the meetings and with the wealth of Atari info on
the net I couldn't justify the $35 just for the BBS. I would have been
prepared to pay a smaller amount for the BBS, but not $25 when
most material was available free elsewhere. And while the ST is still
my "first love", as a collector I am needs-be multi-platform and may
be on PC or Mac one minute and a CP/M or CoCo the next. Missed the
community tho.
.
See you on the Board.

> Can anyone tell me what a "moniterm" monitor is? Is it a 19" monitor for
> the Atari?

Correct.

> Will it work with my computer (I've got a Mega STe. TOS 2.5)?

It won't, as it needs either a TT or a Mega ST with a special
graphics-card.

> And will it work with most programs?

Yes, it's very compatible as it's basically just a taller and wider
mono-mode.

Load liberty into qed (or any other binary editor) and search for McSn.
Replace this with something else, like MxSx. Liberty will now install a
'MxSx'-cookie which GEMJing definitely won't search for ;-)

Does this AES system affect Midi software?

I run Cubase Audio Falcon,on a 14 Meg /85Meg internal Drive Falcon.
I do have the MultiTOS kit disks,but they are corrupted,so I won't
install them on my system.Plus, when ever I read articles MultiTOS
never seems to get good credit,so I never bothered to put it on
my computer.

Would putting AES on my system affect the way how Cubase runs?

>
>MagiC and N.AES are both commercial. N.AES actually included MINT. MagiC

>"hackable" (Will I get flamed for saying this?).

I know it's been said that Cubase does not work with MagiC,I would
like to have one of these replacement OSs,but I do not want to
buy one if they affect Cubase's performance.
I mainly use my Falcon for Midi/Audio recording.

>
>>
>> Who sells this software?
>
>That depends on which country you live in...

Well,I live in Bermuda,I normally buy my Atari software and Hardware
from,companies such as Wizztronics,and Systems For Tomorrow in

the USA.
I've Heard about MagiC,but I've never heard of N.AES before.
Is N.AES software from Europe?
Seems like all the best Atari software is in Europe.

Thanks!

We're moving, and while I sold my ST while ago, I just discovered I still have some peripherals.

I'd like to give them to someone in the Atlanta area, so I don't have to hassle with a trip to UPS. Anyone willing to come out to Marietta (or meet me at work in Alpharetta during the day) to pick 'em up is welcome to the following:

"Spectre GCR" MacPlus emulator -- has original box, manuals, and some update diskettes. Mac ROM is in the emu cart. Cool thing about the GCR is that it read and wrote Mac diskettes (kinda funny, now that Apple's killing floppy diskettes).

Atari Sf 314 floppy drive -- I think this is just single-sided (400K), but truthfully I forget. Anyways, I've got the big ol' power supply and a round disk cable for it.

Both items are "as is". Free stuff means you get what you pay for.

Contact me by e-mail if you're interested. If I don't get any reponses by 3/22, I'll UPS 'em to anyone interested.

4485. cab problem displaying Jpeg

Newsgroup: comp.sys.atari.st
Date: 1999-03-13 00:00:00 UTC
From: Tom & Glynis McCartney <tmccartn@calcna.ab.ca>
Message-ID: <7cf9d8$ejg@ds2.acs.ucalgary.ca>
Source record: 82647

I finally got a copy of CAB 2.7 and installed it on my Falcon. The
install went fine. The iconnect set up worked fine on my second attempt.
But when ever I display pages or even try to display a stand alone file
with a Jpeg I get a blank square where the Jpeg should be. I tried both
the jpeg ovl file that comes with CAB and the Jpegd file for the falcon
neither one works. What am doing wrong?

System: Falcon 030 with 4mB RAM. 500 MB harddisk space. Magic 5,NVDI 4.

Any help would be appreciated.

Tom McCartney

>tuned to fit together?

You can use Jinnee too but then you may find that you can't use the MiNT
applications as Jinnee seems to require that an applications end with a
extension. So for instance you will not be able to launch *fsck* but if
you rename it to *fsck.ttp* it will work.
I don't think Thing is especially tuned for N.AES. It's true however that
N.AES comes with a special version of Thing but it has the same
possiblities as the normal Thing version. The only special is that it will
only run with N.AES.

>Btw. I find it quite strange that some users find Magic a very stable

I don't know much about the Mac but I've seen my brother's G3 hanging on
several occassions so that conflict-catcher seems not to work very good.

4492. Re: Newton's Atari?

Newsgroup: comp.sys.atari.st
Date: 1999-03-13 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36EA11DD.5532@geocities.com>
Source record: 82776

Xav,

This is too eiree!! But I like it. So you are a Atari user AND a Newton user. This is way cool. Not only a Newton user, but a 2100 user. That's rare!

Simply put, Newton 2x00 handhelds are the BOMB! A little about my work in the Atari realm, and then MY story.

Currently working on getting a website, sponsored by the server of the Atari Users of North Texas, to contain ways of getting palm tops and PDA's connected to the Atari platform.

It appears that we'll be getting terminal programs that will allow null modem connections and then get a good null modem connection program for the Atari, and that will be good at establishing a crude link. Other applications will be featured later.
We hope on getting a good collection of Portfolio files from one of our members to put on the web... but all and all, the important thing is to get other non-Atari palmtops connected, in particular, the Newton!

Talked to Steve Weyer (the creator of the programming utility that you can use to program NewtonScript *WIHTOUT A DESKTOP* but on the Newton itself), and he suggested the slourp application.
Steve also mentioned, much to my surprise, that he had worked for Atari Corp back when the Atari 800 was the big platform and the ST was being prototyped. That was cool!

But yeh, have you ever had much luck getting a Newton & Atari connected? Anything we can find out will be cool.

MY STORY....

Served as a missionary in Guam for one year while in college. When I got back, my birthday&christmas present from my dad was a Newton 110 messagePad.
He figured since I liked Macintosh, I would like Newton. However, they were in two different worlds. I thanked my dad for the cool looking device, sometimes used it for a calculator, but really didn't have any need for a personal data assistant. I would pull it out from time to time to show off to friends, and watch the notes crumple up and get tossed in the trashcan when I deleted messages. (Really cute animation if you've never seen it)
When I got to college, the Newton would get pulled out of mothballs when I needed a calculator and especially a way to keep up with the myriad of assignments I had.
After having it almost two years, I managed to find a way to get a

connection utility. Then it got really cool. Games, applications... books. It rocked.

I was happy with the Newton 110. It did all I wanted, and I am not one to spend more than $200 on any given computer. My Atari 400 I bought in 1982 for $150 with a $50 rebate. My Macintosh 128K I got for $200 in 1989, and in 1997 I got my Macintosh Performa 550 for $150 after it had sat on the shelf for a year. I have a slew of other computers, all bought for under $200... most under $50.
I saw the Newton 2000. Looked cool, but figured my Newton 110 would do the job till I saved the money to upgrade. But then I tested it at the Apple store. I have never been as impressed in a jump in technology.

The adds said "Objects in mirror might be moving 10x faster than normal" and they were right, with 160 mhtz of power (verses the 25 mhtz of the 110) the thing was lightning fast. The graphics on the 2000 were awesome, the sound great, and the applications fabulous! Though I had a keyboard working with a software patch, the 2000 accepted it with ease. And what truly shocked me, IT RECOGNIZED MY HANDWRITING!!! And that's a trick. :)

I went out on a limb, applied for the loan, and bought that sucker three months later! Only last month did I finally pay the thing off. (Newton 2000, carrying case, keyboard = $1100) But I tell you, the experience has been great.
I was one of the first to autodial Apple the morning the 2100 upgrade was available and got the free 2 meg flashram card. ;)

In summary, Newton IS another platform. Just like PC, Mac, Amiga, and Atari, the Newton is it's own platform. It's greatest strength and weakness I guess you could say. I learned from the Newton how much fun it can be to use a different platform, to run not neccessarily with, but alongside the PC stampede.

That's why I getting into a platform I just recently discovered, the Atari, and that's why I'm setting up my website. Like chocolate and peanut butter, I think they'll go great together. ;)

So... perhaps with a ST emulator, the Newton 2000 could become what the STpad was meant to be? Just a thought...

Doctor Clu

Bengy Collins wrote:

> > I just got MagiC and intalled it...
> > It has the wrong keyboard layout!

I had the same problem. I was furious. I had a harsh
conversation with my supplier ACN. I wanted my money back, because
I could not use their product anymore. Here in the Netherlands
the direct seller is responsible for the quality and good working
of the products they sell. (Even the grocery next door).

But wherever you are, this is a case for suing.
They accept your money, knowing that their product will disable your hardware.

In the end I edited the keytabl.sys myself.
I didnt have the patience to actually sue the ACN or ASH.

ASH incorporated more flexibility in the MagiC nucleus, which is a
good idee, but apparently they did it only for their own convenience.

I think it would take a involved programmer 1/2 hour to produce
any language keytabl.sys from versions 5.x

Far much less time than make the decision to do nothing
or at least give a description of how to make a keytabl.sys

It is a shame.
Henk.

To be honest, I don't know much about these stuff. But wil fVDI also make it
posible to work with, for example, a RageII on machines like a Hades or Milan?
If it's easy to write new 'drivers' for it then I see a huge
potential. Maybe once it is posible, to make program which generates
such driver. And where all that the user has to do, is inserting some
information regarding the graficscard, which can be found in the
manual (or on the net or so).

4499. Atari ST - SCSI, Zip drive, Akai S2000 question

Newsgroup: comp.sys.atari.st
Date: 1999-03-13 00:00:00 UTC
From: screenstyles@hotmail.com
Message-ID: <7ce2rdnqm1@nnrp1.dejanews.com>
Source record: 82783

Hello,

Would it be possible to get some kind of SCSI adaptor and use my ST as part of a SCSI chain, something like this:

Akai S2000 <----> Iomega Zip 100 <----> Atari ST w\SCSI adaptor (Terminated) (Terminated)

Would it be difficult to terminate the chain at the Atari end?

Ideally I would like to be able to use a Zip disk as an HD for my ST, and also send SCSI sample dumps (from Avalon or Zero-X) to my Akai.

Could someone recommend a good PD/freeware HD driver that I could use with my Zip drive in the chain described above?

Please email me at screenstyles@hotmail.com

Thanks,
Paul.

4504. Desktop IMG on Neodesk 3

Newsgroup: comp.sys.atari.st
Date: 1999-03-13 00:00:00 UTC
From: tconrardy@hotmail.com
Message-ID: <7ceeds$i92$1@news.ncal.verio.com>
Source record: 82788

Hello All:

What is the procedure to use an .IMG or .NEO picture for the desktop
on NEODESK 3?

You can do it on ver 2, and I downloaded the demo ver 4, where there
is a dialog box for desktop pictures, but I can't figure out how to do
it on Neodesk 3! (it came with my Atari...no docs)

Any info would be great..I guess I am looking for a neodesk 3 user.

Thanx

Hello!

The Atari Users Group in Northeast Ohio, USA, is meeting at
7:30 PM at Peoples Community Church, 631 North Rocky River Drive,
Berea Ohio. This also includes 8-bit users too. I am brining my
Falcon030 setup, to demo and show.

Any questions, feel free to email me.

Regards,

Jim W. Krych

4507. WARNING: Wensuite 3 beta 3 can cause severe probs

Newsgroup: comp.sys.atari.st
Date: 1999-03-13 00:00:00 UTC
From: tos4ever@ping.be
Message-ID: <36eac1721f4e7b0@ping.be>
Source record: 82791

Hello,

I just found that the French browser Wensuite 3 beta 3 can cause severe problems.
For some dark reason Wensuite creates inside Wensuite's main dir sometimes an folder -at least the desktop Thing v1.27 recognise it as an folder- without a name. To my best knowledge there is no way to rename or delete such a nameless folder. Maybe you can do it with a diskmonitor but that is far beyond my knowledge.
Also Edge doesn't recognise this as a fault so you it can't repair you HD.
Some prg's like Diamond backup 3 doesn't like such dirs. DB3 crashes and take the whole system down when it encounter a nameless folder.

The desktop Thing v1.27 doesn't like it either. If you try to delete such a dir via Thing's delete option you'll get a warning box which says something like this:

Thing can not handle such deeply nested folder structures!
[cancel]

The worst is that the [cancel] buttom doesn't do anything. You may click on [cancel] until you drop dead but that message won't go away.
Reboot is the only possibility.

The only way I know to get rite of that unlabeled dir is zeroing the partition with a harddisk tool.

Up for bid is a Atari STe Computer Package.

Atari computer package: STe 4meg/Tos 2.06 allows(Drop and load program).
New DD floppy replace 12/98 from "System of Tomorrow".
New Wizard mouse can be used with STe or Amiga.
*
System Disk Cooling fan(ARCHER) for STe 120VAC 60Hz 12w.
Power Cables/Manual/Computer/TV switcher/RCA cable.
Monitor SM124/Power Cables.
*
Megafile 30 HardDrive-Cables/Manual/System disk.
*
Golden Image Scanner (Blk/white) Text/Photo 100-400DPI.
Org.Manual/Software (Migraph "Touch-up").
Plus Scan:Align Board.
Power Pad.
*
Clock Module External (Eureka/Software)/Battery New.
Infotel Modem 14.4 Fax/Voice (Cables)/Power pad.
Two Stereo speakers for Audio output.
One Org. Atari JoyStick.
Two 8" extension Cable's for Mouse/Joystick.
Extra Org. Atari mouse(Working).
Two replacement DD Floppy drives(epson SMD-380 not working/Org for Parts!
*
STe is Y2K ready!
Perfect for Studio Musician(Midi/Keyboard-Slave control).
*
All Above HardWare/Software is one owner property!
Excellent Condition!!!
*
Any question about above package e-mail:

...
>To be honest, I don't know much about these stuff. But wil fVDI also make it
>posible to work with, for example, a RageII on machines like a Hades or Milan?

There's no problem with that, in principle.
For the time being you'd probably have to change a few relatively minor
things and recompile, though (a PCI card on the Hades/Milan is probably
not accesses in exactly the same way).

>If it's easy to write new 'drivers' for it then I see a huge

'Easy' is of course a relative term.
Once there is a fully working non-accelerated driver and one for a
hardware accelerated card, it should be possible to base other drivers
on those sources. That still doesn't mean that anyone could do it...

>potential. Maybe once it is posible, to make program which generates
>such driver. And where all that the user has to do, is inserting some
>information regarding the graficscard, which can be found in the

Hardware accelerated graphics cards are much too complex for something
like that to work. While they probably share the same basic principles
for many things, the details are likely to vary a lot.
(I've not looked at anything besides the mach64 yet.)

>manual (or on the net or so).

A major problem is that there is no documentation available for most
current cards. You may not even be able to get hardware information when
you sign up as a developer (and if you do it may not cover all features
(such as 3D or video support)).

Tom,

Assuming that the *.ovl's are in the Modules folder, you might check in "Options" under "Display" and make sure that you don't have "text instead of images" marked. With the commerical version that might be a default setting.

As I share a SCSI EZ drive between ST and pc, I have tried the idea, it
failed.

This would be brilliant if someone can come up with the solution, as
this would mean I can keep both the machines linked up!

Hi, well I figure whether you drink Lapin Kulta, Heineken, Coors Lager,
Yugoslavian Pivo, Belgian superbeer or whatever, the end-effect of "a
couple too many" will always be that of the sledgehammer... :-)

PS: it's the same with wine, btw!

PS-2: looking at the subject line, one gets the impression that it's about
a new brand of beer???

Hi Tom,- don`t know if this helps, but do you have JPEGD.PRG in the Auto folder?
It`s Brainstorms JPEG decoder program. Can`t remember where I got it, but it might be from the ftp.lib6.fr/pub/atari/

I run almost the same setup as you, well- I did before, and always have that
program in the Auto folder. It`s a left over from CAB 1.5.

cheers

Joergen

It exist a lot of them on the Falcon but I must say these are
definitely NOT Mah-Jong games ... these are Shangaï¿½ like games ... the
full mah-jong game (four players) is far more interesting and this
game DOES NOT EXIST on Atari !

If the drive is a SCSI one (50-pin interface on the back) then you'll need a converter like the Link series, and an external case of some sort. If it is an IDE one then by using one of Mario Becrofts (Tariland NZ) IDE hosts you might be able to fit it internally (easy with 2.5" quite hard with 3.5") or once again in an external case to provide power...

Probably the most famous finnish beer. It's exported all around the
world. The name means "Lappish Gold" btw.

Other well-known finnish beers: Koff (winner of Best Lagger price
of the World Brewer's Assocoation in 1994), Karjala, Karhu.

4540. Q:Using export.drv on Falcon (Cubase)

Newsgroup: comp.sys.atari.st
Date: 1999-03-14 00:00:00 UTC
From: Anders G{rder <f93anga@dd.chalmers.se>
Message-ID: <7cg96qnfp1@eol.dd.chalmers.se>
Source record: 82677

Hello,

I am currently upgrading my MIDI-setup from STE to Falcon. On the STE I used a handy
16 channel MIDI out expander connected to my serial out. As I use Cubase I used the
export.drv to run it. Now I built a similar cable for Falcon (9 pin) and since I know this
is
a different interface I am now looking for a new driver for Falcon. Is there one or do I
have
to open my Falcon and find the old connector?

best regards

Anders Gï¿½rder

> you get extended cables for these (3metres?), also mouse ext?. 2. Does
> anyone know the exact dimensions of the STe motherboard and PSU so I can
> see if it fits without gutting my STe?

1. I think you can get them from Titan (sales@titan-bss.co.uk)
2. I'm sure it will fit width wise - depends on how deep the box is. My Falcon fits into such a box so I'm sure an STe will.

Depending on what you use your STe for, don't forget that it can be inconvenient to have a dongle (if you use Cubase) and MIDI cables plugged into the side if the unit is mounted in a rack.

>need to make it work?

ST225 is old, low capacity, but power hungry MFM drive. Cables and
connections will not be enough, and as I know there is no MFM disk interface
for Atari's. Perhaps Atari Megafile 30 had something like that.
My advice: forget this drive, give it to some computer museum and buy 2.5
inch IDE drive.

Pera

You can have a look at my WoodTTower at:

http://ping4.ping.be/dipching-drulkhor/HARSOF-E.HTM

But be aware it only exist one exemplar of this Tower in the world
because it's handmade with triangular HD leds !!!

First: know no sulution.
But I have a remark.
Seemingly there is a grave error in the translated French documents
of Atari.

I have seen more French programs making a mess with folders.

And making strange paths like:

C:\a_name\pov\pov\pov

or ....\pov\\pov

or filling a fileselector box with a pre-choice of
*.**.inf

I thought maybe there is a conflict because of I have a UK TOS and
they a French one.

But Martin, you do have a French/Belgium keybord at least?

As far as I can see: HDDRiver software and the Link adaptor should be
able to allow two masters on the bus.
But it also can be a problem of the ZIP especially if he is of the
Plus type i.e. intelligent knowing when parallel port and when SCSI
is used and also knowing if SCSI-termination is possible.
Its intellligence in this has been reported to fail sometimes.

Any one a real good solution?

> in the Atari realm, and then MY story...

Well, count me too. I also am an Atari user as well as a Newton user. Currently, I own a Falcon, TT, Mega 4 (all used) and my original 1040 ST (purchased new with color monitor for approx. $1100). I bought a used Newton 100 and after a couple of months threw my Franklin planner away. The Newton was the most fun community since the Atari. I guess I like the underdogs. After being "hook" I save my money and bought a Newton MP2000 (which has since been upgraded).

Then the curtain dropped and the Newton was cancelled. I thought, how strange, every platform or system I buy goes under or dies. I saw it with Ohio Scientic (my first 8 bit computer), Atari, Newton and recently Syquest (maker of removable hard drives).

Neron
N8WSF

P.S. I really like Steve Weyer's shareware program Newtscape and his continuing support!

I don't think the zip is fast enough. I believe there are some recorders on the market that will write to zip, but the data is compressed.
Perhaps you could use the zip to back-up/archive after recording to hard disk.
By US Code Title 47, Sec.227(a)(2)(B), a computer/modem/printer meets the definition of a telephone fax machine. By Sec.227(b)(1)(C), it is unlawful to send any unsolicited advertisement to such equipment. By Sec.227(b)(3)(C), a violation of the aforementioned Section is punishable by law.

There used to be a whole lot of firms who sold tower cases for the
complete Atari line. The only one left that I know of is based in Germany
They sell two towers for the TT, a normal and a luxe (?) edition.
Price is between 170DM and 500DM depending on the options one likes...

Pentagon Gmhb
Heerbrink 4
310079 Almstedt
Tel: 050 - 6090 6666
Fax: 050 - 6090 6686
No email or website, I gues they stil live in the dark ages -))

This firm has some very interesting stuff for sale !!

- 16 MB original Falcon RAM board with 16MB Ram : 111 DM
- New !! SM 124 monitors : 111 DM
- new Lynx II : 59 DM, new games for lynx :between 33DM and 49DM
- PC Keyboard Interface : 79 DM
- New Portfolio + set : 299 DM
The set consists of : two 64K RAM cards, serial interface + cable
and software, also some bundled software...

They send goods to all over Europe, payment COD

A bit off topic -)), but maybe some people might be interested in this
stuff, certainly at those prices....

Cheers from Belgium

Dennis

The commercial version is 2.41, there's a not very good beta version from Wensuite called 3B3, this can be found at the Belgium ftp site ftp://193.190.205.13/atari/incoming/internet

There's also Draconis, which is also a integrated WWW program, a demo can be found at http://www.mucs.com, this is also not very good...

That's a bit drastic...
With a disk editor like Knife, Dade, Diskus etc go to the partition, and
click on directory....
When you see the folder you want to delete, replace the first character,
with E5 (hexadecimal), You should now see a funny looking character, which
I can't type here. Now save the directory.

That's all there is to it....

Cheers from Belgium

Jos,

go to the first bloody stupid PC shop and get a midi or big tower (AT
model).
The TT's mainboard won't fit in a minitower. I know a friend of mine built
his STe into a bigtower. Gotta extend some ports to the "outside", but the
major advantage is the bigger PSU and additional room for hardware. I've
got this minitower for my SCSI gear and I don't regret it. The TT's PSU is
something like 85 watts, if I recollect well. Not something to hook a
grafics card, additional big HD, more TT-ram etc to... Let alone another
CD-ROM drive etc.... Even a minitower comes standard with at least a PSU
of 200 watts... at a price of around 90 Dutch guilders.

The TT's casing isn't all that bad; just the PSU's rating and the bloody
fan sounding like an idling P&W J-79 are not my favorites... :-)

4572. CAB.OVL 1.3017 Release Package available

Newsgroup: comp.sys.atari.st
Date: 1999-03-14 00:00:00 UTC
From: baldrick@dilbert.netset.com
Message-ID: <7ch63vrte1@athena.netset.com>
Source record: 82709

CAB.OVL 1.3017 Release Package is available on my web site now.

http://www.netset.com/~baldrick/

Changes?

It's a release package, so I've updated the documentation.

Authentification has been verified to be working.

Another modification to the 'referer' support.

68000 and 68030 versions available in archive.

Dan Ackerman
aka baldrick@netset.com

4573. FS (US only): Hard drive, Spectre GCR, SuperCharger, ST books & disks

Newsgroup: comp.sys.atari.st
Date: 1999-03-14 00:00:00 UTC
From: gwestndrf@aol.com
Message-ID: <19990314162749.04947.00000532@ngol01.aol.com>
Source record: 82710

For Sale:

1) Spectre GCR cartridge w/128K ROMs, Spectre 3.0 software, System 6.0.8, owner's manual, 100+ 3-1/2 DS/DD disks of software for Macintosh.

2) SuperCharger w/power supply, DMA cable, installation & other miscellaneous DOS software, owner's manual, original box.

3) Quantum P40S hard drive (42Mb) - Formatted and setup to run both of above when connected to an ICD host adapter. This item is the bare hard drive only.

4) 5-1/4 720K internal floppy disk drive w/cable to connect to Atari ST floppy drive port.

All of above for $50.00 plus shipping. I would like to sell these as a system. However, I will also consider offers on individual items. Everthing is in excellent working condition.

Other items for sale (make offer):

1) Turner's Atari ST books (volumes 1, 2 & 3)
2) Compute's "Learning C" book
3) Sam's 520ST technical service data package
4) 100's of 3-1/2 DS/DD floppy disks.

Please reply to Gail at my e-mail address: gwestndrf@aol.com

4574. Cuase/Atari question

Newsgroup: comp.sys.atari.st
Date: 1999-03-14 00:00:00 UTC
From: ajwells@ix.netcom.com
Message-ID: <36EC0B6B.2507@ix.netcom.com>
Source record: 82711
Cross-posted to: alt.steinberg.cubase,comp.sys.atari.st

Here is a real stupid one, but anyway... I just added a megafile drive to my Atari ST and I cant figure out how to switch drives from inside Cubase... what I want to do is to run Cubase off the hard drive and then open up some midi files that are on floppy... but when the dialog box comes up, it only gives me the hard drive as a selectable option... I'm sure I'm just missing a keystroke somewhere... thanks in advance

4megs of ram only? Are you sure you're not just out of mem? Tried doing just
a bare boot..then trying? Really if you're going to be doing some serious
browsing with CAB under MagiC, and NVDI, 4 megs just doesnt cut it.

4576. Re: Getting 520 ST on the net

Newsgroup: comp.sys.atari.st
Date: 1999-03-14 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36EC359E.548D@geocities.com>
Source record: 82713

From yet another 520 ST (4 Meg) user...

I have concluded that STinG is a myth... but from what I've seen of Cab 1.5 so far (I will probably buy the commercial version when I get this up and running) I'm impressed.

So yeh, last night I figured I would start the treasure hunt and get things going. After finding out how to un LZH a file (I'm coming from the Macintosh world... LZH.. what's that?) I was able to get Cab 1.5 from the Cab site. It was the German version. (Is there an English version? If not.. I needed to learn German...) and the way it set up the HTML was really nice. Can't wait to see how this thing runs.
Of course, I uncompressed STinG, and the only files I could find that were executable were files that would load for second, quickly display some error message, and then return me back to the main menu.

So far my understanding of browsing on the ST goes something like this... Cab is the browser, and you need AT LEAST 1.5. The connection and PPP/TCP stack to run Cab, at least the one I've heard most suggested is STinG, which is a offshoot of STiK.
I've seen in the Cab program where other telnet, newsgroups, Ftp, and others would be added. Nice. But I guess I just need to get the connection utility set up.

Any advice at this point?

Also, since I plan to be running this program for mainly text (since I'm working with a 8 mhtz machine running with probably a 19200K buad port at best), what features should I turn off to make it more efficient, and how do I turn off the auto load on the graphics.

Thanks in advance,

Doctor Clu

Hello everybody !
something very strange happens since I changed my harddisk for a SCSI 3 Seagate Baracuda.This shark works fine but...........when I hook up my Toshiba CDROMplayer (Extern) to the SCSI bus of my TT030, it seems to damage the bootpartition.The icons of Jinnee are gone and after the second try, the TT won't boot up again, also when I on the 3rd try removes the SCSI cable !!!
This never happened with my old 500Mb Seagate....
What can be the bloody reason ??
Please help or share your experience with me.I changed the SCSI ID of the Toshiba, it didn't help. So what ??????????

Hmm.. Syquest gone? I'm sorry to hear that but not unexpected. I looked into getting a Syquest a while back used for a reasonable price, but decided to spend a few more dollars on a Zip Drive. I think that was the way a lot of people went.
Ohio Scientific? I'm curious, never heard of that.

Yeh, the Newton Community has recently had it's one year anniversary since the discontinuation of the Newton, and things are still rolling. Sure, quite a few have switched over the palm and other platforms, and then they come back. It's funny. The Newton is a wonderful little device. The newton community right now has it's list serve, NewtonTalk, Newton Underground, and quite a few other places that still have a lot of activity. And you're right, they do have a community about as fun as the Atari one. They also have some newton running websites, which I think is cool. (Do we have any ST computers as servers?)

So that makes three 2000 users.. that rocks. Yeh, I'm getting accustomed to the ST, but I hope to make the two machines (ST/2000) talk to each other. Should be interesting. I'm figuring a null modem connection between the two.

Just wish I had the source code for the PC or Mac connection utilities! Argg!

Good to hear from you!

Doctor Clu

It depends on what type of ITEM selector you have installed. If it is
the "normal" item selector, you should have a selection of what drives
yoy can access. Choose 'A" for floppy.

>The rest of the world is forgotten, or at least not paid any
>attention to.

I'm afraid I don't know much about v6 but Magic v5 had a particular
way of dealing with the keyboard mapping:

At 'install' time it would copy the existing keytable and copy it into
MAGIC.RAM before writing MAGIC.RAM to disc. This meant that if you
spent some time geting the mapping right BEFORE you installed Magic it
would remain correct thereafter without the need for using re-mapping
utiliies at each boot-up.

Has anyone tried this method with v6, it could be the permanent answer
to all these probs (and will avoid having to load CKBD etc. on each
boot).

You should not too though, if you are only use Mag!x 2.x, and not using a replacement desktop, you can still make Magxdesk understand the AVSERVER protocol by use A Bartons "AVserver" :-)
This sounds good for you, since chances are you are using a ST with possibly, limited RAM (mag!x2 didnt work on falcon)
Well download it from the authors web page, http://www.barton.de as my download bay is still down,

I haven't tried, but there is a HD/CAF compatibility page somewhere. I can't remember the URL, but the Zip is mentioned as being able to do 4 tracks simultaneously, which is not bad considering the speed of the device. 100 Megs will only allow two 5 minute stereo files anyway.

As fast as i have a working code for this that i can release
i will do it.

I have to redesign some parts of the program to make it possible
to handle news, this work has started but will take time as
i do all coding at my free time and that time is very small.
Sometimes it is hard to do coding both at work here and at home.

I think he may be talking about the .ST images we see everywhere.

This is something I want to know also as there a programs to convert these
disk images to Atari disk for Mac, PC...but no bloody Atari!

Is there an ATARI program to convert a .ST image to a standard 720K floppy?

Thanks

James

That's a very small inconvenience compared to what happens if two separate
apps tries to use the sound-hardware directly at the same time ;-)

I don't find this strange at all. N.Thing is not personalized like registered Thing is, so if N.Thing could run under TOS, MagiC or Geneva as well it would probably kill Thing as a shareware-product.

The downside with this is that you have to wait for the next N.AES-update (every other year or so...) to update your desktop, so you might just as well register Thing for the frequent updates.

> When you buy MiNT98 CD and N.aes the you have two times Thing.

So is there a registered Thing on MiNT98?

4603. Millennium bug

Newsgroup: comp.sys.atari.st
Date: 1999-03-15 00:00:00 UTC
From: philipt@dial.pipex.com
Message-ID: <7cirnskps1@plug.news.pipex.net>
Source record: 82604

TOS 2.06 and Y2K
The ST(E) Millennium Bug

Gemdos stores the date in one word, with bits 9-15 being the year minus 1980. Hence the year 1990 is stored as 10, 1999 as 19, and 2000 as 20 etc. With 7 bits any number up to 127 can be stored, corresponding to 2107. (Gemdos may limit this to 119 ?).

The Gemdos functions tgetdate ($2A) and tsetdate ($2B) invoke the lower-level Xbios routines Gettime (23) and Settime (22). These routines read the date/time from, and send it to, the Intelligent Keyboard Controller or IKC. [This is a big 20-pin chip on the underside of the keyboard]. The IKC contains the "real-time" clock. Now, data are transmitted to and from the IKC in packed BCD format: each byte containing two decimal digits. One byte is allocated to the year, hence a two-decimal digit year is stored and processed in the IKC.
For the year 1999, stored by GEMDOS in memory as 19 (25 hex), one might expect that the value 19 BCD would be the byte written to/read from the IKC by Settime and Gettime.
But no, these routines add/subtract an offset of 80 decimal. Thus for the year 1999, Settime gets the value 19 from tsetdate (or by direct Xbios function call), adds 80 to produce 99, and sends 99 as a 2-digit BCD to the IKC. Conversely, Gettime gets the BCD number 99 from the IKC, subtracts 80 from it, then packs 19 into the prescribed DOS format.
So what about year 2000? This is stored by Gemdos as 20 (well within its capable range), but Settime changes this to 100 and then of course fails to encode this as a two-digit BCD. [In fact Settime sends illegal nibbles to the IKC, which are ignored].

As far as I know, Settime and Gettime are the only routines used for communicating with the RTC in the IKC. So it does not matter if the IKC stores the year 19 or 99, so long as Settime and Gettime agree to add/remove the same offset. I suggest zero offset. To stop Settime adding 80 to the year, the patch for TOS 2.06 UK (and probably German version too) is:
1F43 $80 change to $00
and to stop Gettime subtracting 80 from the year:
1E91 $50 change to $00

For other versions of TOS, look for strings beginning with $80123c001b... and $501400e982...

With these changes, TOS can handle dates up to 2079. For example, using Control Panel to enter the year 15, Gemdos interprets this to

be 2015, subtracts 1980 giving 35, passes this value to modified Settime, which now stores 35 BCD correctly in the IKC.

In a date-sorted window, files of the year 00 are correctly shown as later than those of 99.

OK, all ready for the next century now...

Acknowledgements
Most of the above information is taken from "Atari ST Internals", Abacus Software 1988.
The patches have been tested using the TOS RAM Loader program from Pera Putnik

In article <7ch1u1$9sd$1@uni00nw.unity.ncsu.edu>, dated 14 Mar 1999 19:16:17 GMT bwmott@unity.ncsu.edu stated:

> Has anyone had any luck using one of these monitors with
> an Atari ST? If so what pin connections did you use?

The pin outs (in analog RGB mode) are:

1 & 2 - ground
3 - red
4 - green
5 - blue
6 - none
7 - composite sync
8 - Hsync (?)
9 - Vsync(?)

I am uncertain as to whether the 1080 actually supports separate horizontal and vertical sync in analog mode (it does in digital [RGBI] mode).

With an ST, since the syncs are negative, and the simple solution would be to tie the two sync lines together (using either a couple of resistors, probably 330ohm, or diodes), and feeding those into the composite sync input on the 1080.

I have noticed in the past that some 1080's are very finicky about sync, so even if your cable is properly made, success is not guaranteed.

Doctor Clu <clu-da-bar@geocities.com> wrote on 14-03-99:

> Any advice at this point?
This takes me back to the days when I wanted to go on the net, all I knew
was that CAB was a browser and that one could view HTML files with it
I didn't have a clue about what I needed and how to install. So I took the
easy way out and ordered the commercial CAB
Installing this was just a matter of mouseclicks, and being very lucky the
ISP I choose didn't need a script file either. So in a matter of minutes
the program was installed, and I could surf and conquer the net....

Only then I found out about STIK/STING, I figured I didn't need it because
I was already on the net, I never heard or read anything about newsgroups,
ftp, ICQ etc...One day I wanted to download a certain file and CAB always
just returned a error code. The file was on a ftp site, and since I didn't
had a ftp program this was a nono. So I started reading all kinds of FAQ and
surfed to some Atari WWW links. I downloaded a ftp program, which said it
needed STIK/STING, I searched hi and lo for a IConnect client, but found out
this didn't exist. In that same period I wanted to send email also, at first
I used hotmail, but this was not a real solution, and yes you guessed.. no
email progs for IConnect, but a few for STIK/STING. So I downloaded
everything I needed, read the docs...and took the plunge in the deep water...

I didn't have to worry about HSMODEM because this was already set up for
CAB/BBS connection, so after installing STING, editing the various config
files and CPX I crossed my fingers and connected.... It took me a lot of
time before everything was set up the way its supposed to be, and compared
to the easy installation from IConnect this was like going back to the
stoneage...

But, I could email, download ftp files and even surf the WWW so I wondered
why I ever bought the commercial CAB? I noticed that surfing the WWW was not
as fast with STING and that the OVL file sometimes needed a lot of time to
do the same things opposed to the commercial OVL. But I didn't care and was
a very happy Belgian, I could do it all....

I use MagiC since version 3.0 and STING and his clients all run smoothly
under this OS (the same applies for MiNT), but somehow the available apps
just were not to my liking....they worked allright, some had bugs, but with
every new release they got better, it was just the way they look, feel and
handle which I didn't really like.... One day ASH announced Emailer for
Iconnect, when I saw the program running for the first time, I WANTED it,
it had the "right" handling and feel, and since that day I never used
anything else anymore, I don't even look about what's on offer lately...
CAB 2.7 comes with FiFi which is a ftp program and also works OK. So, now
I'm back on IConnect and his clients. There's no ICQ client for this

combination available, but since I don't need this, I don't miss it either.

The reason most people use STING and his clients are because its freeware and also because ASH Emailer en FiFi need a multitasking OS to run.

So, what should YOU do ? I gues its a matter of taste... If you use Magic as OS and you're not bothered about paying extra for the Emailer/newsgroup program go IConnect. Installation is very easy, and all the programs work just like they supposed to do.
If You mainly work under Single TOS go the STING way, it will take a while longer to setup correctly, but once installed it is very stable and if you encounter problems, people in the newsgroup will offer you all the help you need.
If you use MinT, go the STING way also, some of the clients for MiNT are very good

There's one more thing: speed
Somehow the IConnect combination is 25% faster then the STING combination, I don't know why, but that's the way it is. I reported this a while back in the newsgroup but apart from some other IConnect users who confirmed this, nobody really came up with a answer or solution.

Since you haven't bought anything yet, I would start with the STING setup and when you buy a new CAB, which you should do because version 1.5 is very limited you can always install IConnect and see what it does for you....

Good Luck and
Cheers from Belgium

Dennis

Yes, and I repeat, it's in the Quick FAQ. The program's called ST2DISK
from Pascal Nowak and it's available at:
http://st2disk.atari.org

Remember that downloading pirate games from the net is illegal.

>Is there an ATARI program to convert a .ST image to a standard 720K floppy?
YES
About a week ago, Pascal Nowak announced ST2DISK.PRG in this newsgroup.
I deleted the posting but the website was on atari.org
So take a look through last weeks postings...

The program converts a .ST disk to a .MSA file, with MSA.PRG you can transfer
the .MSA file to a normal Atari floppy....
The program is free, but you need to register it to get a free key by email.

Cheers from Belgium

Dennis

4615. Weird zip file problem

Newsgroup: comp.sys.atari.st

From: screenstyles@hotmail.com
Message-ID: <7cjaqr$vr0$1@nnrp1.dejanews.com>
Source record: 82616

Hello,

Problem: I have d'loaded a Zip file, and I can't get it to unzip succesfully for my Atari ST. If I expand the archive on a PC (with PKZip or Winzip) everything SEEMs to work fine, but when I take the disks to the Atari I find that dozens of phantom files with helpful names like 'Aa.' have appeared, and that the files I wanted to get at are corrupt. The phantom 'Aa.' files are invisible on the PC, and impossible to delete on the Atari. PK Zip and WinZip both report no errors in the Zip file. If I try to unzip the files with ST Zip it just crashes. I have never had this problem before - any idea what's going on? I have downloaded the offending Zip file on three occaisions, but I get the same thing every time.

Help!

Please.

Paul~

Only one comment: this does not seem to be true for Falcon machines.
The IKBD time is automatically zeroed by Falcon TOS on startup and the
time is not set. Of course, Falcons have separate hardware time of day
clock...

Those Aa files are what's left of the VFAT filenames (long filenames and
upper/lowcase characters from the Winblows world). The other files
probably have names like filena~1.txt or something like that. Just
ignore the Aa files and rename and copy the real files over to another
disk.

STZip probably crashes because it can't deal with VFAT filenames.

4618. Computer Dungeon Update

Newsgroup: comp.sys.atari.st
Date: 1999-03-15 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <19990315123014.27820.00001091@ng-ft1.aol.com>
Source record: 82619

Hello

Just a note to let you know that we just updated the Computer Dungeon website. This update includes a new product listing that features a Like New STacy2, a new Portfolio system, and a new XEGS system. Also included some new downloads for your ST and Falcon. Will add more updates as time allows.

Please stop by and check out our website by pointing your browser to:

http://www.cyberspy.com/~cdungeon/dungeon.htm

Thanks for taking the time to read this and we look forward to helping you with all your Atari needs.

Al Horton
The Computer Dungeon

Or maybe they have different Ataris in France? French programs
which do not contain surprisingly serious bugs (worst example:
Sound Studio of Studio Capitale) are hard to find.

Hi Cal, I beat you to it. Fnordadel and its source code is available
at:

http://users.snip.net/~mhop

Several versions of it, actually. Still trying to track down the
source code for the latest version.

>If ya can run Linux/68k, check out Citadel/UX at

Hello,

A little special:

Get the Atari Compendium CD and the Suzy B 2 CD Set for $20 shipped in the US. For Canada, $22, and for other countries, the cost should only be $23 to $25.

All prices are in US dollars. All items will be shipped via First Class mail or Air. I also have Mouse Masters, Monitor Masters, Eureka Clock Cartridges, and Atari Portfolio PC Card Drives and Parallel Port interfaces for anyone interested.

It's not difficult to recase a Falcon in a AT bigtower, basically all you
have to do is to make extensions for the ports and perhaps cut away parts
of the 5.25" slots to make room for the huge Falcon motherboard.

Hi,

> i was wondering if anybody has managed to get a 100 meg zip
> drive working with caf.Every time i start to record i get
> a scsi 3 error, what does thi mean?

There shouldn't be any problems.
I've tried the Zip and it was ok up to 6 tracks in 48kHz, but on the 7th track, I got the familiar ï¿½HD too slowï¿½ message...
If you have some fragmentation on the Zip disk, I guess the number of possible tracks will be reduced rather quickly, since the Zip is a slow one.
You could check out my homepage to find some info about various harddisksï¿½ compatibility with CAF. Most of the HD's on the page are getting old now, but every now and then I get reports about new ones, so keep your eyes open and report all tested drives to me, please...

>to open my Falcon and find the old connector?

The serial port expander won't work with CAF as far as I know (I couldn't get it to work myself when I tried - probably the same problem as with the Midex, with too old technology that won't keep up with the speed), so get an MO-4 from SoundPool instead and get yourself 4 extra midi outs from the printer port.

For a dummy like me it's probably better to make a back-up (minus that
faulty dir) and zeroing the whole partition.
This has the advantage that after reinstalling the soft I'll have a
optimized partition.

Anyway thanks for the help.

If one use a French TOS, German TOS, English TOS, Dutch TOS or whatever
shouldn't make any different I guess.
Anyway the most French developpers uses Falcon's.
About Wensuite. I really don't understand why one can make such a bad
prog. They are developing that thing already more then two year and it's
still very unstable, at least on my Hades and TT 030.
Every new version they make seems to contain more bugs (or features).
The only positive point is that it's so damned fast but that's about all
I'm afraid. One can read a review of Wensuite in the latest ST-computer.
The reviewer wasn't very pleased with Wensuite either.

BTW: Do you know that the forthcoming Light of Adamas pro will support
Java-script? If I may believe the advertissement the pro-version should be
available at Neuss fair.
Only I wish it was a little bit more stable. Furthermore I wished I could
use it under 64k or 24b color mode. For some reason the colors are wrong
on my setup.

For those who understand a little German I enclosed the text as found on
the Maus.

****
Die Pro-Version des Draconis-Internet-Paketes kommt!!!

Vorstellung der neuen Pro-Version auf der ATARI-Fri¿½hjahrsmesse 1999.
Auf der Messe, die vom 10-11.4.1999 in der Stadthalle Neuss stattfindet,
werden wir die neue PRO-Version des Draconis-Paketes vorstellen.

Die PRO-Version enthi¿½lt zusi¿½tzlich einen FTP-und einen Telnet-Client. Als
weiteres Highlight wird die Pro-Version eine JavaScript-Anpassung
enthalten, so dai¿½ Sie auch mit Ihrem ATARI nicht mehr auf die Features von
Web-Seiten verzichten mi¿½ssen, die Java-Script zwingend voraussetzen.

Mit der PRO-Version macht das Draconis-Paket einen deutlichen Schritt
zu einem multifunktionalen Gesamtpaket fi¿½r alle wichtigen Internet-Dienste.

Hi Roger!!

I had/have the Magic.ram [version 5] patched so all the nasty German
keys were changed but also my Polish ogonki were placed under the numerical
keypad. Patching done using Gemhexed.prg [any other diskeditor should do].
No CHKBD needed as well!

I m not so sure about solving the same problem with Magic6???

> Anyway the most French developpers uses Falcon's.

This (development machine) should not matter as long as the program is not
Falcon specific. StudioSon (that is the correct name for the Studio Capitale
program) is a Falcon specific sound application. Yet it does not work correctly
on a Falcon! Well, okay, perhaps it is not MiNT friendly? Nopes, it works
the same way (= equally bad) under plain TOS. I don't know, how they managed to
do it, even submenus in the user interface are screwed up. Perhaps they do them
manually? FYI, Falcon TOS supports submenus, no need doing them with tricks.
The actual sound part does not work stable either (docs say it is not stable
under MagiC, gosh, how does the "instability" look like if THIS is called
stability?), you get all sorts of crap noises in weird moments just like the
program wasn't able to have a full control over the sound subsystem. And so on.

Then such a developer would certainly say "Well, we gave up the development because
of no interest". What an interest can be in a crap software?

I had similar impressions on first versions of Wensuite (later I gave up testing).

This calls for a recent story.
My TT with internal SCSI-1 Seagate drive, extrenat (after 50 cm
flatcable a 44 Mb Syquest, then (50 cm round cable) a CD-ROM then
(200 cm round cable to a Epson scanner, then with a 25 cm flatcable
to a Quantum drive.
The last one on the bus (the Quantum) gave read/write erorrs even
with SCSI-verify.
Yesterday I opened up the TT to get the Seagate out and that
doubtfull Quantum in.
And what did I see?

terminators: 3 red boogies in the TT righthand back-corner!!!

How could it ever work?

Yes there was an artikle in the Dutch ST magazine a long time back.
It indeed concerned itself with a LightHouse.

We managesd to get things in it but, when repairing it was a hassle
that tower. A TT box is in my opinion easier.

I once had the same.
My solution was: I opened the SCSI-ROM box.
I found out that although there was SCSI-in and a SCSI-out connector
the drive was terminated.
Puttng a terminator in the SCSI-out gave the errors.
Also see if maybe there is a T-slit made in the box.

Hey, did you ever get more real Thing updates than N.AES-updates? The
steps from 1.25 to 1.27 don't count, as they were almost only bugfixes
...

Ciao

Thomas

4640. TOS/Magic info required

Newsgroup: comp.sys.atari.st
Date: 1999-03-15 00:00:00 UTC
From: David Bolt <dbolt@my-ste.demon.co.uk>
Message-ID: <Ydc38FA6bP72Ewq0@my-ste.demon.co.uk>
Source record: 82641

I'm looking for some info on all the different versions of TOS,
specifically the locations of the following sequences of bytes within
TOS. The first sequence is:

04 00 00 50 14 00 E9 82

The second sequence is:

06 10 00 80 12 3C 00 1B

I've already got this info for the following UK TOS versions

Version Location 1 Location 2
1.00 $FC1D20 $FC1DC2
1.02 $FC1F16 $FC1FBB
1.04 $FC316C $FC321E
1.62 $E03344 $E033F6
2.06 $E01E8E $E01F40
Magic 5.11 $005CA4 $005D56

Of special importance is the locations in the Milan and Hades versions
of TOS.

Thanks in advance.

From: tNhOoSpPmAaMn@uoguelph.ca
Message-ID: <7ck1as$p3u$1@testinfo.uoguelph.ca>
Source record: 82642

: The House has a bill set up for a vote ASAP on whether to charge LD
: charges for Internet access even if you dial-up locally. This is
: something that affects each of us. Please read and forward:

: Congress will be voting in less than two weeks. CNN stated that the
: Government would, in two weeks time, decide to allow or not allow a
: charge to your phone bill equal to a Long Distance call EACH time you
: access the Internet.

: The address is http://www.house.gov/writerep/

: If you choose, visit the address above and fill out the necessary form!
: If EACH one of us, forwards this message on to others in a hurry, we
: may be able to prevent this injustice from happening!

: PLEASE PASS THIS ON!!!

I suspect this may be something of a hoax, being unintentionally passed along. First, there are no references, either to the CNN web site or any other news organization. Second, the URL listed above contains no information about the "bill" mentioned; it only lets you look up your representative. Third, there's no mention of the bill number. I don't know how the House of Representatives works, but here in Canada each bill from each sitting of the House of Commons has a bill number (e.g., Bill C-55, the anti-split-run magazine bill). Finally, since when does Congress involve itself in telecommunications regulations? Isn't that the job of the FCC?

I seem to recall there was just such a proposal before the FCC at one time, but it got tossed.

MagiC-PC is very usable with apps such as papyrus and Calamus. I have no
experience of GFA, though ISTR reading of problems with it under Atari
MagiC so I'd be a little suspicious of it under MagiC-PC. That said, the
version I'm using is v1.2 (=Atari v5.11), and the new MagiC6 is supposed to
be a vast improvement.

Nope, but I got them several months after the rest of the world ;-) It
took me a bit over 6 months to get the 1.1.7-update (N.AES), and if I
hadn't been able to get 1.2.0 from "alternate" sources I would still be
using 1.1.7...

Like I explained in the previous posting ==> TERMINATION.
If the termination is not right, one can get all kind of strange problems,
one of them is when you save anything to harddisk, the directory gets
corrupted.... next time you boot ==> zippo

Just check the termination very carefully, and soon you'll be a very
happy Dutchman again -)))

Cheers from Belgium

>Jinnee are gone and after the second try, the TT won't boot up again,

Sorry Jos, this is probably going to drive you mad..... but according
to the description this is definitly a Termination problem....
Check out if termination is set on the CDROM and also plug in a
external terminator in the back.
Also have a look inside the TT, see if the terminators are still there.
In theory they can be removed, but I've heard a lot of funny stories
about TT's going berzerk without them. To play it supersafe also
terminate the harddisk....

Good Luck

Dennis

4647. TOS ftp client for STiK API updated

Newsgroup: comp.sys.atari.st

The place to go for most information on MagiC 6 is the MagiC Online page.
If you go to the download - patches section, you will find several programs
which will remap your keyboard.
Try http://bengy.atari.org/patches.htm

>sure I'm just missing a keystroke somewhere... thanks in advance

Sounds like you have an earlier TOS (operating system). All you have
to do is click on the line that's showing you the path to the drive,
go left with the arrow buttons to get into a position to delete the
(C) (or whatever letter your hard drive is) (with the backspace key),
replace it with (A) then click on the top left corner of that box
(funny little icon) and then it will read and write to your floppy.

Alternatively we're talking a TOS upgrade here! (On a chip, though it
is possible to get one on floppy ...)

4652. Help! calling Calamus SL/SLM804 experts

Newsgroup: comp.sys.atari.st
Date: 1999-03-15 00:00:00 UTC
From: db361@torfree.net
Message-ID: <F8MACJ.72M.0.bloor@torfree.net>
Source record: 82732

Dear Atari enthusiasts:

For those of you who have missed you XEST fanzine fix, my apologies.
Another one is on the way.

Meanwhile, my SLM804 laser printer and my TT030 (4/4/540/NVDI/TOS3.05)
are not co-operating much, as of late.

When I try to print a document from Calamus SL the printer dialogue
defaults to the letter size paper and the automatic feeder tray, no
matter what I try. You can't change it in the printer dialogue panel.
I've hacked with my CALAMUS.SET file using a text editor, but nothing
seems to change the printer's new `fixed' default.

I know that I am missing something obvious, here. Advice, please.

Thanks.

Magic, geneva, MiNT whatever will do.
The only thing you hae to take care is to just have an AVSERER desktop :)

Thing, Jinnee, Neodesk (up to some extent, but for just avstart, that'll
do)

This is how it works:

Your desktop, (for example THING) is the one you use:
Somewhere (depending on your OS) you need to assign the env variable
AVSERVER (not! AV SERVER, nor, AV_SERVER, nor, avserver, nor AvSeRvER ;)
anyway, AVSERVER=THING, (not the path of THING.APP, just the global name
of the desktop, could be AVSERVER=JINNEE is you use JINNEE desktop)

Once done, the applicatios that will use the av-protocol will know who to
talk to when exchanging data, commands.

The desktop you use will need to have some files assigned to some
application, in example:
you want all the *.wav files to be played by gemjing program.
And all *.mid to be played by your midi file player and so on.
This is a global setting. Which is very nice, because no need to mess with
that very often, (same goes for graphics, *.jpg assigned to imagecopy4
etc)

What popgem (here) does, is, asks the avserver to play the file.wav as if
you doubled click on it from the desktop.
So thing will know how to forward the request to the appropriate
application.

Basically:
popgem ask AVSERVER, run effect.wav.
AVSERVER is THING (for example).
THING will check in its database (cfg files) how to play *.wav.
THING sees that *.wav files have been assigned to C:\players\playwav.ttp
THING then starts playwav.ttp with the sound files as asked by the
av-client (popgem here), hence the file effect.wav

Easy?
Clearer?
I made this long because it seems there are many people still wondering
what AVSERVER is, and what it can do.

The pros of using avserver by applications:
(in my opinion of course).
It guarantees that the files will be played fine no matter the machines.
Because the user is the one deciding which player will handle the *.wav

files.
More flexible (same reason as above)
The program is much smaller, and it is very easy for a programer to add
av-protocol calls. (few lines of code only).
Very fast to code, because don't have to mess with the *.wav formats etc.
All the hard works has been done by the player. SO why duplicating the
efforts?

cons:
The users need to have an AVSERVER desktop.
And multitasking OS.
If many applications asked for the same type of requests to the avserver,
it might create a mess? (never dealt with that).
In example, popgem calls sound player, but atarirc also ask to play a
sound on the same player. I guess they would be delayed.
That's all.

Source record: 82735

Hi from another 520 ST (4 meg) user. I posted a message earlier, but I guess it got lost.

Hey there, I loaded up Cab 1.5 last night. First off, is there an english version and if so, where can I find it? If not, I have no problem learning German. (Since English is a "Germanic" language anyway right?) :)

Secondly, I take it STinG is the connection software to connect Cab to the web. I loaded that up as well, or tried to. Have to admit, I didn't find many executable files in Sting, and those I did find quickly errored out and returned me to the mail menu.

I need some elementary beginning help on getting this set up. I am new to the Atari world, but would love to get this set up and on the internet.. even if just to get E-mail, newsgroups, and the text off webpages with no graphics (which is my plan at this point).

I'm thinking the ST can accomplish the basic computer needs of today, and I'm having fun making it do so. Any help will be appreciated.

New ST user,

Doctor Clu

Actually, Cubase will not run under any multitasking system, because it
would conflict with its own multitasking MIDI system.

If you want to run such a system, you need a bootmanager so that you can
select under which envirnment you wish to start your computer each time
you boot.

>
> Would putting AES on my system affect the way how Cubase runs?

Yes. Cubase won't run under MiNT or MagiC.

> >
> >MagiC and N.AES are both commercial. N.AES actually included MINT. MagiC

Then don't bother really... If you wanted to use it for DTP or internet
stuff, then it would definitely be worth the hassle, but not if you only
run Cubase.

Yes it's still under development. The current version is WS 3beta 4.

The problem is that they seem to be developing under MagicMac, and the
beta versions are VERY buggy and crash all the time. You should really
wait a few months. The downloadable beta 3 is not worth the download.

The CAB archive contains all the international files. You'll find a
cab_e.rsc file that should replace the cab.rsc to make it an english
version. Same for all the docs and readmes.

That's it. The only other compatible one is MiNTnet, but it only runs on
MiNT. As a beginner, you don't want to bother with that yet. There are
also some complete proprietary packages such as CAB 2.7+PPPconnect or
Adamas or WenSuite, but these are commercial and incompatible with STinG
client software.

> I've seen in the Cab program where other telnet, newsgroups, Ftp, and

You'll find it right away as soon as you setup the english rsc file.

>about TT's going berzerk without them. To play it supersafe also
>terminate the harddisk....
>
Hi again,

I've explained Jos already by e-mail before that I suspect his termination
to be wrong.
But before he starts terminating every device, I'll explain once more:

TT's SCSI goes two ways: one flatcable to the internal HD. This one needs
a terminator or the drive set to "termination ON" (whatever the
possibilities).
The other way goes towards the SCSI port: whatever you connect, be sure it
is on ONE LONG BIG line, no Y or T connections. The end of this line has
to be terminated too, whether that is an active terminator or the last
device on the line with termination enabled. Everything else (read "in
between": NO termination.

Also don't leave a piece of 10 cm flatcable going further out, beyond the
last connector on the line. Cut the flatcable just beyond the connector.
If you have a flatcable with 6 connectors, use the last device on the last
connector, not on nr. 3.... or hook a terminator onto the last connector.

If this all is OK and the problem remains, check the position of the
connectors on the flatcable: it's possible to create shortcircuits or no
connections doing this not precise enough...

> able to allow two masters on the bus.

This is only possible with the LINK97 (not LINK96 or any other!) host adapter. The link adapter has to care for everything in this case, not the software. Two initiators (there is no "master" in SCSI terms) supported by software are possible with SCSI, not with ST ACSI. In this case the hardware must handle everything and the only hardware that can do this for the ST/STE is the LINK97.

They HAVE TO be removed if there is an internal and and external device.
In this case the TT is in the midst of the SCSI chain and thus must not
be terminated.

He could attach it as a second host inside a Megafile. These had
provisions for a second device. But I agree, that's about it.

Frank, you should contact Mario Becroft in NZ (not too far from Oz), to
get an IDE interface for your STF. With a 2.5" IDE drive you'll have a
very neat setup.

Yes, Rein, that's the HARD way to do it :-)

My point was that the Magic 'Install' sequence writes the 'current'
keyboard tables into MAGIC.RAM so if you get the keyboard mapping
right (with whatever utility) and THEN install Magic the patching will
be done automatically.

Roger, beats me too...

I know the terminators removed works OK here and with a friend's TT. We both have "remakes" (with, you won't believe it, Intels...). Must be late revision boards if not the latest.

Perhaps earlier boards have problems with going by SCSI's rules... It all sounds completely Atari-wise again: only half-done jobs on several ports (remember the printer one, the Midi-ports, Falcon's SCSI, etc.)

Reading Dennis' statement supports this too...

I believe Jos operated the external SCSI with the terminators in place which didn't work; he might check by removing them.

I DON"T BELIEVE IT!! An Atari WITHOUT MIDI PORTS!??!! Now THAT
that was a marketing blunder! I know TOS can do a lot more then Midi,but the
midi ports have changed many a musicians mind to sticking with the Atari
Platform.

Tim

So have you tried Cubase running under Geneva?

How does Cubase Perform under it?

How much of the 14 megs of Falcon memory is used by Geneva?

A fully loaded Cubase Audio Program when loaded takes alot of ram.
With 2 programs like that running together in must not leave much ram
To do audio recording and midi in Cubase.

Is this So?

Thanks!

sean

Hi Roger

This would mean that I can disable all the keytabl.sys
and reboot?.

I have done that just now, but now I am back to a german
keyboard: a qwertzuiop. I did a cold reboot.

I do not remember if I installed under TOS or MagiC 5,
but I know that both had the UK keyboard layout.

The problem is that I do not have V5 anymore, and I think it is
not sure if the above worked with TOS 3.06

Greetings
Henk.

Hi all

I have a rather old TT, februari 1991, it came with TOS 3.05

First I changed to 3.06.
Some 5 years ago I changed the ST157N for a LPS340.
I have now the old ST157N in a standard SCSI box for use with the 1040ST
and a link, and as unit 1 extern on the TT.
I didnt change a thing on termination, it all just worked.
Never had a problem.

Cheers
Henk.

Hello "John,

n> MagiC-PC is very usable with apps such as papyrus and Calamus. I have
no
n> experience of GFA, though ISTR reading of problems with it under Atari
n> MagiC so I'd be a little suspicious of it under MagiC-PC. That said,
the
The problems are the same on every MagiC version on every system (and can

also occur with MultiTOS).

The interpreter works fine (as long as you can say that about GfA ;->) as
a
SingleTask, but the compiler needs a patch (there are different ones, i.e
GFA-
Patch, which also exists in an English version), because it has a nasty
fault on its memory allocation.

n> version I'm using is v1.2 (=Atari v5.11), and the new MagiC6 is
supposed to
n> be a vast improvement.
The 6.0 offers general improvements, but the now released 6.1 is said to
be 2
to 3 times as fast as the 6.0 (just waiting for the update at the moment).

It does a sort of "on the fly precompiling" the 68000 code for much faster

emulation.

>Please e-mail me with any answer to my question.

Aside from second hand shops etc, you'll also find the Amiga mice
worth looking at. Many were switchable so that they'd fit either
machine (switch just swaps the axis in one direction iirc). Thus is
would be possible to modify a non switchable Amiga mouse anyway.

In the meantime, hold down the ALT key and use the arrow keys to make
the mouse move. Use SHIFT in conjunction with this for finer movement.
Left button is the "Insert", right is "ClrHome" (still holding down
ALT).

I'm sure Uwe meant once one starts using the internal AND external
scsi devices one needs to remove the internal terminators in the TT.
The scsi bus needs to be terminated on both sides, the TT being one
unless it's in the middle (scsi wierdness aside).

>Platform.
>

Tim,

first of, the Milan is NOT an Atari. It's a newly designed piece of hardware, built around TOS, to be TOS-compatible. The firm got a license to develop TOS for these purposes. Furthermore it's got nothing to do with Atari. And as you may know, Atari ceased to exist.

Then, the Milan comes cheap. Using PC components, it can be. Also, the machine is complete, but not completely complete. One user wants it to use for Midi, another one doesn't. So: make the Midi stuff additional, so the user not using it doesn't have to pay for it. Same with SCSI gear. It's a basic machine, you can expand it at extra cost. The basic model is rather cheap. So don't call this a marketing blunder, people have been thinking about this machine. Besides, the way Atari ever incorporated Midi wasn't much either: it works basicly, that's it.

PS: Michael, how about a free 060 model, incl. SCSI, supercard, 19" monitor for this posting??? Well, OK, skip the 19" monitor...
Well, OK, skip the supercard.... Drats, I'll take a basic model... :-)

Don't count on it.. Diamond Back, that is. I have a Wangdat 3100 that I used with my Falcon, and Diamond Back would back up and verify that everything was OK.. but then it would have trouble locating the storage sets on restore, and it would work maybe half the time! Thank GOD I backed up my songs to jaz and didn't rely on this stupid software.

Maybe there's a better software program..

I've been trying to use CAF on a TT030 (master) sync'd to a PC running Sonic Foundry's ACID (slave). It almost works, ACID is about 20ms fast for some reason. 20ms isn't much, but it isn't quite tight enough for my stuff, I've been trying to find work arounds. I can't seem to get CAF to generate a SMPTE offset, despite playing with the synchronization menu.

The tightest way to do it would have CAF generate SMPTE 30fps over a midi cable. The slave machine needs to know how to interpret SMPTE / midi time code. An alternative would be to use plain vanilla midi clock, which is 24 pulses per quarter note. Midi clock is nice for programs that look for midi start/continue/stop messages, SMPTE doesn't generate this type of info.

I'm sure someone here will correct me if I'm wrong -- I'm not much of an expert on this but trying to learn.

Hello,
Well the MagiC WebRing is right now in its begining stage. I havn't asked any sites to join yet or advertise it very much because I am need of some GFX, or Images , imagemaps, to use. The AtariWebring has quite a few ones, and so does the MagiC WebRing. I have recieved 4 different gfx, but I would like more. Could anyone who likes to play with GFX a bit help me out here, just make something simple, small, big, straight, round whatever. I just want to make sure that there is an image that suites all different types of pages.
The images I have already recieved are Very high quality professional looking, and I thank those who have helped me already.

I know of one Ma Jong type game called Mah Jong Solitaire.
It was made by Cali-Co. Superior Software. According to
the docs it will work on any Atari ST, Mega or TT with
a Color monitor and mouse. I think it was written in
GFA Basic 3.0 and runs in ST Low. Haven't tried running
it on the Falcon but the docs says it will run on a
hard drive. I have the original disk and it was
copyrighted around 90 or 91. I have never played it
but booted it up to take a look at it. Looks interesting.
Graphics are pretty good too. It has different
Layouts to choose from. I see no option for different
Tiles.

Also I have a game called Shanghai by Activision that
is based on Mah-Jongg according to the manual.
This one has different ways to play such as solitaire,
Team effort, Tournament and Challenge. There are
144 tiles in all with different suits. I don't think
there is a option to choose a different set of tiles
in this version. I think the copyright is around

1986. I booted it up on a 4meg STe and it looks
real good.

I think NeoDesk 3 can use the following picture formats for
a desktop picture...

PI1 or .PC1 ST Low resolution 16 colors
PI2 or .PC2 ST Medium resolution 4 colors
PI3 or .PC3 ST High resolution 2 colors

These are Degas and Degas Elite formats. I think the NeoChrome
format is supported too, Not sure about the .IMG format in version 3.

If your picture is a Degas low resolution one, try renaming it to
NEOPIC_L.PI1 and put it into the NEODESK 3 folder. Next time you
bootup it should be displayed as a desktop picture.
If your picture is a Degas Medium resolution one, then you have to
rename it to NEOPIC_M.PI2 or NEOPIC_H.PI3 for High resolution.

If you want to try a .IMG picture then try renaming like above.
And place it into the NEODESK 3 folder.
I'm not sure if the .IMG format is supported in NeoDesk 3.

Hope this helps,
phantomm@eastky.net

I am using a replacment desktop , Ease 3.1. Sorry I should have
mentioned it before.

I've set the Ease option in 'applications' for GemJing to run .wav sound
files , however still no sound.

Here's my Magix.Inf

```
#_MAG MAG!X V2.01
#_DEV 1
#_TRM C:\UTILITY\VT52.PRG
#_TSL 1 32
#_FLG 1 ; logo left
#_ENV DESKFMT=C:\UTILITY\MGFORMAT.PRG
#_ENV AVSERVER=EASE
#_SCP C:\CLIPBRD
#_ACC C:\
#_APP C:\AUTO\APPS
#_CTR
#a000000
#b000000
#c???000?000<00<?00;;400;0;;;4440??0;;?0?;0;;;0??03111103
#d ;
```

Maybe Ease v3.1 does not support this AVSERVER method? Can anyone
confirm this?

Cheers for the download suggestion I'm of to try it now,

Bye

Paul Mac

Hi Stephen
```

I had a STE before so i was surfing in b\w and now i&#65533;m using 1024*768*64kso it
is a rather large step up. And it is much faster (the ads said 20 times).
Also i bought a 17" monitor also a large step from Ataris 12". Over all i think
i&#65533;m glad i did it. But it has been a little steep learning Mint, but i didn&#65533;t
know anything about before.

Cheers J&#65533;rgen

4702. [Magic6] Limit Memeory Broken?

Newsgroup: comp.sys.atari.st
Date: 1999-03-16 00:00:00 UTC
From: bjr@localink4.com
Message-ID: <7ckqsq$f93$2@remarQ.com>
Source record: 82559

I've never used MagiC untill a few days now...
I've read the manual a dozen times and still can't figure this out.

How do I limit the amount of memory PageStream2.2 takes?
I did the install application, limit memory dialog.
I also ran limitmem.ttp ../PGS2.PRG 4000
.
Well...it still hogs up all the memory on my 14meg Falcon.

Any tips here?

Brian

4703. [MagiC] How to UNLOCK files/folders?

Newsgroup: comp.sys.atari.st
Date: 1999-03-16 00:00:00 UTC
From: bjr@localink4.com
Message-ID: <7ckr6p$f93$3@remarQ.com>
Source record: 82560

Since installing Magic 6 on my Falcon...I frequently find that
I can no longer delete some files or folders. How do I unlock these?

Also, what's the best way to set/unset the fast bit and such with MagiC?
I tried launching NeoDesk4 on the side to set these bits...but it usually
complains with a file open or set read only error (as above).

Brian

Thanks for all the replies on this subject. I have been offered an
original which I'm going to have. The Link 96/7's sound good and I
suppose will be hard to find. New ones seem a bit on the pricey side.

I've always managed for my requirements with a with 40-100 mb
hard drives, so if I can find one < 1 gb it will seem huge.

Cheers

My poor ST has gotten a bit flaky and no longer boots from the hard drive, and on boots from a floppy sporadically. I have tried all that I can think of to get this thing up and running, but to no avail.

What I need it for is to transfer songs, both finished and unfinished, to my Mac.

I live in the DC area, and there doesn't seem to be anybody who works on Ataris anymore, not even Toad, which surprized me.

I would rather not buy a new machine if I can avoid it, and don't want to send it away. If anyone can suggest things to try, or lives in the area and can help me out I would sure appreciate it.

I have had some success at getting PowerST to work, but I don't have everything backed up to floppies. I do have things backed up to a Syquest 44 meg cart. I even recently acquired another Syquest drive that I can use on my Mac. Is there anyway to read the Atari cart on the Mac?

Well, anything anyone can suggest would be greatly appreciated.

Thanks,

Shane King

Not too well at the moment I'm afraid. It has no MIDI ports, and there
were plans to either design a MIDI board or use a SB16 for sound, but
I'm not sure of the status of these projects.

The Hades is a better (but more expensive) choice, with the famous (and
expensive) StarTrack board, which includes a DSP, MIDI, etc... and even
runs CAF.

Hmm... I have an internal HD (terminated) and an external bus to HD,
CDR and streamer. I removed the termination close to the TT SCSI port
and everything went MAD!!! So I put the termination chip back in
again. Puzzled but pragmatic :-)

Besides, not only has it nothing to do with Ataris, it also does not
concern "all of us", merely because a large portion of us don't live in
the US. Even if it is true, I'm sure it would be more appropriate in
soc.usa.politics or comp.telecomm.legal.

Yup, probably the most common mistake: the bloody TT terminators.
I recall when I started using the external SCSI, the first thing I did was
remove the bastards... (had a friend telling me to do so).
The problem with wrong termination always is that even with faulty
termination the stuff seems to work OK. Then hook in another device, still
no problems. By the time you hook on another one you never suspect the
termination when you get problems... :-)

Have you pulled them out already, Jos????

Well, I think the Milan can do exactly the same. At least I know the Milan
can use the StarTrack card. A VME adaptor for one of the ISA slots is
available. As for standard MIDI ports, I think I remember that a MIDI card
is either in development or already available... anyone? So, the cheapest
choise would be a Milan 040 with a StarTrack (if not the MIDI card is
available in which case that would be cheaper). But until the 060 Milan is
available, the fastest choise (but by far the most expensive) one would
be, as stated, the Hades060 :)

>Jos

Well, I'm not a girl (or AM I???????) but Uwe clearly stated that:

ONCE ONE STARTS USING THE EXTERNAL SCSI BUS, ONE NEEDS TO REMOVE THE
INTERNAL TERMINATORS IN THE TT!!!!!!!

Simple as that.

This is what I heard years ago when I got my TT as well, and once I
connected my tower to the bus, I pulled them out. Never had one problem.

I happen to have them lying around between the gear: three pieces, they're
rectangular bodies, 8 pins each, lightbrownish color. Mark them before
pulling them out, so you know how to put them back in if needed (haven't
got a clue whether or not it makes any difference, but just to be on the
safe side).

To be complete: if you operate your TT with only the internal HD
connected, you need to put the terminators back in. Or, make a centronics
plug with an active terminator, to take the place of the external cable.

I wouldn't bet on it, but I figure at least 50 percent of the TT owners
operate the bunch faulty... (Jos, I gather you want a tower, not a fawlty
tower :-))

If you start getting problems with the terminators removed, I'd say you
did something wrong on the termination of the "external end". Sometimes it
shows, sometimes not. I can operate my TT quite OK without the external
chain connected and without the terminators back in place, but it's not

"the official way".

PS: I went to the bathroom in between and checked: I'm NOT a girl...

Oh... and Karhu means "bear" - the bottle has a bear face on it.
Karjala is the name of the state that overlaps the Finnish-Russian
eastern border.

> Here in Ghent, there's a pub who claims they've got all the best and

as someone who used to have a mono system for many years, I can
well imagine the feeling :) But, I was able to find many interesting
games that would run in mono:

OXYD (mono version)
Super Breakout
Worms
Space Quest III - The Pirates of Pestulon (in fact many early
Sierra games run in mono mode)
Just about any Simarils games (like the Ishar series) run in mono
The Secret Of Monkey Island runs in mono
Runner's Revenge (a Lode Runner clone that was great, you could
literally play it for hours...)
Lure Of The Temptress
Hitchhiker's Guide To The Galaxy (okay, it's a text adventure, but
it's a good one :)

On 16-03-99 Louis <louis.holleman.demon.nl> wrote:

>*ONCE ONE STARTS USING THE EXTERNAL SCSI BUS, ONE NEEDS TO REMOVE THE*
>*INTERNAL TERMINATORS IN THE TT!!!!!!!*
>Simple as that.

The problem with a TT is that it is not that simple.....

I've got two TT's here. One I use daily and the other one is reserved
in case distaster strikes-)). Using exactly the SAME SCSI setup on
both TT's is NOT POSSIBLE !!!
On the daily used TT, the terminators got to be inserted on the board
or all kind of weird things start happening. On the other TT it's just
the opposite..... I use the same internal harddisk on both, and connect
the rest to the external SCSI port.

Internal Harddisk = Seagate Medialist 4.5Gb ID 0 terminated !!
External Harddisk = Quantum Fireball 3.0Gb ID 1
External Harddisk = Quantum Fireball 1.2Gb ID 2
External CD Writer = PHILIPS 2600 ID 3
External CD Writer = TEAC 55S ID 4
External CD ROM = Pioneer 24x ID 5
Epson Scanner = GT ID 6 terminated !!
TT030 ID 7
The terminators are plugged in on the board and the internal harddisk
is terminated by a active terminator, the Epson scanner is terminated
with a external passive terminator AND a active terminator inside.

Perhaps Atari made some changes between different revisions, but I do
know that pulling out the terminators is giving way to all kind of
strange behaviours on that one TT.
If I don't use a double termination on ID0 and ID6, everything works
and behaves normal, until I start writing a CD, then things go wrong,
SoundPool suggested the double termination and since then I haven't
got problems anymore....

The problems Jos Vlietstra is encountering, all sound like a faulty
termination. So if a single termination doesn't work, try a double one,
it might not be according to the rules, but it works and that's what
he desperatly wants right now......a working set up.

Cheers from Belgium

Dennis

I went to MABN Schiedam NL for a demonstration.
The following happened.

Paul Moerman (The shop keeper) teared a MILAN out of a cardboard box,
put it on a table, plugged in a PC keyboard and monitor and
lo and behold:
within a minute I was playing with MiNT, N.AES and Thing without
problems. It was all nicely installed on the HD beforehand.

Than Paul did some simple trick and showed me the flash ROM OS
working.

That was the default H/W configuration.
040, IDE HD 1Gb 16Mb

This costs EUR 771 (1699 Dutch guilders). No monitor. incl VAT.

It looked so promising that
I decided that I would have a 060, PCI SCSI HD&CD, 19" monitor.
I am not easy satisfied. ;-)
I still will pay less than I payed for my TT with NEC3D 8 years
ago.

And now I am waiting for this miracle to happen.

Cheers
Henk.

Designing a VME<->PCI bridge is actually very hard - at least if you want decent performance. The biggest problem is that VME is an asynchronous bus, whilst PCI is a synchronous bus. To handle this you really need to include FIFO buffers between the two busses, which means you can't implement it all in a big PAL device.

Fortunately, as the previous poster says, you can go out and buy a chip that does the job for you. The one I know about, and have used is the Tundra Semiconducter 'Universe' (see http://www.tundra.com/Tundra for more info). I have also seen references to a part made by IBM, but know no more about it.

Well, you're not far off, actually its made of cherries. Some people
even argue if this really is beer. I don't really like it very much
but "Sudden Death" sounded nice to end the posting....

>They each provide 9% of pure malt octane that kills a horse in seconds
Just try to get your hands on a "Golden Carolus" this one contains over
18.5%, kills a elephant in a split second -))

To stay on the topic: MiNT translated to Dutch/Flemish means Munt. There
is a beer which is called Munt..... comes from South Africa, its a lager.

So I figured:
Although I can't run MiNT, I sure as hell can drink it -)))

>Layouts to choose from. I see no option for different
>Tiles.

MahJong Solitaire from Calico is a great game. It does
support different tile layouts - about a dozen or so of
them. I thought it also supported different tile faces
but I could be wrong on that since I always use the same
face. (I also play Mahjong solitaire on the BeBox and I
know its face is different and have trouble switching
between the two.) I thought the tile faces were selectable
under one of the menus - but since I always use the same
set of tiles, it could just be a faulty memory making me
think it supports multiple tile sets.

It does run from hard drive. It runs in low rez so if you
ran it on the falcon you would have to go to compatibility
mode - low rez. I don't recall if I ever put it on my falcon
or not. I usually run it from an Adspeed Mega2+2 ST running
Tos 1.4.

I have poured many more hours into that game than I should
have but we all need a diversion once in a while. Must be
why it takes me so long to get my taxes done every year.

Sob! Sob! Sob!

Anyone want a ICD Link II with software, manual etc... for a p/x or
straight swap on a Link 97;) Pretty please.

The Link II's cost more than the Link '97's!

Cash is a little short my end but I am willing to make up with
PD/shareware software or something, as this will make my life a whole
lot easier if I can link Atari + SCSI + PC.

Mr HD Driver, any idea why HD driver doesn't detect a PD drive (ICD
does) v7.51!

Aye...tried this, and it doesn't seem to work.
It insists on eating up all but about 46k of memory.

Maybe someone knows about a simple app or ttp that lets you enter an
amount of memory to 'hog' until you close it? Then I could just run
that first, then pagestream, and quit the former. A temporary solution
at least.

Thanks,
Brian

Don't count on Keyboard ever mentioning anything about Atari again.
Heck, they've almost pronounced the Mac dead already!

Electronic Musician might be a bit more receptive, because of their
"hackers" background.

>Platform.

To keep the Milan as cheap as possible it comes in some kind of standard
version with no Midi and SCSI-ports.
But both things can be added.

Midi card: 79,-DM
SCSI card + driver: 200,-DM
Milan sound card: 149,-DM
Milan VME-bus card: 279,-DM
ROM-port card (4 ports): 169,-DM

It's up to the user to decide what he wants. I for instance don't make
music so why should I have a midi-port?

Nope iCab has nothing to do with Atari. It's a Mac software of which no serious Mac user will think to use it. Why should they? Icab cost some money, MIE and Netscape are for free (and maybe much better).

Sure it's the same author. I only hope that the lattest Cab-for-atari version isn't the last one he has make for the Atari. The last version is Cab 2.70e. I wonder if the "e" stands for "Ende" (The end) or for something else.

No help from me but...

after installign a MiNT with MiNtnet and stuffI installed the files
from the n.aes disks (3 flops, 1.4 kb each).
From these disks and only from these disk I had trouble: as soon as
with a filecopy a folder was created the first file that should be
placed in that new filder gave the message: Fila Aa cannot be read.
Yust like your Aa problem.

Then something should also be the case in my situation: installing
aes files from disks gets complaints about Aa files.
I wil test MiNT 1.15 (with vfat) to see what happens.

Me also am not a girl.

The TT I mentioned from which I removed the internal terminators (3
red boogies) was brought in here with 'scanner stops many times
halfway'. (scanner=epson 9000 scsi)
For many years the machine was used dayly for DTP.No problem until
1/2 year ago with that scanner.
But also I could not find fault with scanner: it was I suppose indeed
the SCSI.

Hi folks, I'm wanting to use my Atari a lot more, and one thing that would help is a text Editor/ Word Precessor that I save in simple ascii format, and would work from a floppy disk.. since I don't want to use my harddisk whenever possible.

Any suggestions and locations on the net where I could download it?

Thanks!

Doctor Clu

4758. CAB.OVL 1.3100 package released

Newsgroup: comp.sys.atari.st
Date: 1999-03-17 00:00:00 UTC
From: baldrick@dilbert.netset.com
Message-ID: <7cosjvcfk1@athena.netset.com>
Source record: 82541

CAB.OVL 1.3100 released on my page.

Fixes the following problems.

1) I accidentally did the 1.3017 package release with a 1.2904
68000 binary in the archive. This has been fixed. (Sorry about that)

2) I've hopefully fixed the no_proxy support.

I didn't update any of the documentation.

Sorry again,

Dan Ackerman

Source record: 82544

On 14 Mar 1999 23:23:17 , Jos Vlietstra wrote:

Hi my dear friends !
Your contributions did finally pay off.There were moments of despair, moments
in which I hated to be an Atarian, especially when I saw my brother happily
loading his new 3D Formule One Super game,sitting behind his steering
wheel with his feet on the pedals and driving like crazy through the desert of
Africa.....I COULDN'T EVEN GET A SINGLE SPEED CDROM
STARTED ON MY SEVEN YEARS OLD TT.....
But today I was lucky, inspired by your messages. I bought an external
50 pins terminatorplug , a big fat grey plug. I even asked for those 'red boogies'
Nobody had heard of it, even smiled when I stumbled the word 'Atari' ,
so I came home with just the big plug. My CDROM player has SCSI in and
SCSI out, so I put the plug in the SCSI out. Installed SPIN! and turned
the TT off. Then I switched it on, normally no booting but terrible bombing,
this time , IT BOOTS !!!!!!!!!! But.....no, the Spin programs aren't getting
installed, I had an empty Z (CDROM) folder on my Jinnee desktop.
So I switched off the terminator dipswitch on the CDROMplayer and then..
everything worked !! I can't describe the joy I felt then, if you would be
here at that moment I would hug you to death, I think.
So everybody who said it was temination, was right. But still.....in the old
situation, with my old Seagate 500MB , termination in this way wasn't
necessary. This phenomenon stays bizarre for me.....
You can't even say this is a case of double termination, cause the termination
on the CDROM player itself is switched off , only the SCSI out is terminated.
But folks, thanks for everything !
You were great !
Jos

Hi

There are several good ones:

1. Edith profesional
2. 7 Up
3.Everest

all three of these fit on a 720K floopy!

You can get them at Umich...I don't have the web addy handy.,
I heard you can't get there from FTP anymore from Harvards List, but
they have a www site...AH...found it!

The sequence is always the same.
Firstly - both feet are on one ship.
Secondly - one feet is on the first ship and the other on the second ship.
thirdly - both feet are on the second ship.

There are other software that migrate in this way... Superbase is one example.
YES this have alot to do with Atari.... need I say more...

Rgds
William

From: (unknown)
Message-ID: <36f04d1a.122814576@news.pclink.com>
Source record: 82405

You may have run out of disk space. One bug I have discovered in Cubase is that if I shut the machine down, or re-boot without first quitting Cubase, the last recorded audio file will fill the entire remaining space on the partition. Look for an abnormally large file.

Anorther bug I encounter is that if when I record to the last partition, the waveform drawings are not created properly. Just a big black line.

Using HD Driver to format the drives may solve these problems. Atari's own format utility can not properly create large partitions.

Under the "Audio" menu un-tick "Use Waveforms"
You can have Cubase draw the waveforms later if you need them.
Makes recording much faster too.

Good Luck!

By US Code Title 47, Sec.227(a)(2)(B), a computer/modem/printer meets the definition of a telephone fax machine. By Sec.227(b)(1)(C), it is unlawful to send any unsolicited advertisement to such equipment. By Sec.227(b)(3)(C), a violation of the aforementioned Section is punishable by law.

The fastest way is to use removable media for data exchange (HDDRIVER
supports this without additional software) or to share a SCSI hard disk
drive between both computers.

Hey Jo! (sounds familiar) Please watch what you say. Generalizing
nationality-based stereotypes on a multinational newsgroup is not a very
constructive way to handle a discussion. We are not on f.c.s.a and the
discussion has certainly not got down to those levels... yet.

Try a RAM disk, one that can be removed without rebooting (like M-Disk 6). You could have it install at a predefined size, launch PageStream, then remove the RAM disk to make available that memory for other things. M-Disk's RAM can be resized and removed any number of times during a session (it's an accessory).

I'll bet that your power supply has gone south. For temporary use,
borrow a pc power supply and haywire it in, making sure that you
have taken the right voltages to the right terminals. Sheldon Winick
in North Carolina has power supplies for sale, if you want to
continue using it in its pretty form.

If I am not mistaken, they are just multiple resistors in a single package; as such, they would be entirely symmetrical - put 'em in the holes anyway they will go.

This thread is getting interesting, because I have always attributed these sorts of problems to lousy, cheap scsi cables, following the advice of Chris Krowchuk, since departed Ataridom. If TT termination is a problem, maybe it is time for me to pop the top off of this one, and take a look - although I have not had troubles lately.

Hello,

I'm was wondering if there is a better Cubase version for an Atari ST out there somewhere. I'm using Cubase 2.1 now but somesort of virus messup with my computer so it's not working anymore now. Now I'm looking for a new Cubase but I haven't been able to find one yet. A friend of mine had Cubase audio but it doesn't work on my ST with 4Megs of RAM. I don't know much about this stuff but I only need a Cubase again so I can make some music again. I don't want to get a PC and use Cubase on it cause it's terrible on PC's I just wanna stick to my old trusty Atari.

Regards,

Arnaud Loonstra

4785. TOS loading in RAM

Newsgroup: comp.sys.atari.st
Date: 1999-03-18 00:00:00 UTC
From: mhop@snip.net
Message-ID: <36f0d5ae.127774053@news.snip.net>
Source record: 82422

I got several programs that allegedly load alternate versions of TOS in RAM, but no directions on how to configure it, except for RAMTOS26 which crashes on bootup. It may be the version of TOS 2.06 that I aquired, but I have TOS 1.04 on another ST and used TOSDUMP to get an IMG file of it and I still can't get it loaded (using something other than RAMTOS, since it seems to be only for 2.06.

QUICKTOS crashes, and seems to be only for downgrading to tos 1.0, which I already have, so I'm not surprised it crashed loading 1.04.

I have several others such as RELO_TOS and TOSBOOT but don't know where to put the files to have them boot. Sometimes they're suppose to go in the AUTO folder, other times in any folder. I'm going to keep trying different ways until it works.

Any suggestions anyone may have would be welcome.

What virus "messed" with you computer? What did it do exactly? Why not
just reinstall Cubase? Or is it a pirate copy?

Thanks for your clarification! I guess that makes sense to have a basic
machine, then upgrade from there to your specific need. When I first read the
specs, I thought it was a SUPER TOS machine. I still wonder if it would be
better then , say a TT for midi stuff.(once you install the card that is !)

Tim

Hello to all...

I must apologize to several people who have recently called and left messages on our voice mail for not returning your phone calls yet.

Unfortunately, I am currently working 12hour to 14hour days at my full time job and the hours I am at home have not left me a decent hour to return anyones phone calls (I don't think anyone, no matter how devoted an Atari user wants a 2am phone call about software).

Not sure how long my current extended work hours wilI continue. But for the present time, if you are interested in ordering any products that we have listed on our website, please send your inquires via Email to "ComDungeon@aol.com". I continue to read and respond to all Email inquires on a daily basis and have been able to ship all Email orders within 24hrs of my receiving payment.

Again, I apologize to those who have telephoned us and haven't had their phone calls returned. This is not the normal way that The Computer Dungeon does business.

As soon as my work schedule returns to more "normal" hours, I will post to this newsgroup that I'll be available for telephone orders.

Thanks for your patience and understanding.

4791. CDRecorder2 HELP

Newsgroup: comp.sys.atari.st
Date: 1999-03-18 00:00:00 UTC
From: Jacques Rypko <rypko@lal.in2p3.fr>
Message-ID: <36F16007.3988@lal.in2p3.fr>
Source record: 82428

hello from France

Could you help me about CDRecorder2 ?
SoundPool is not very cooperatif !
I have a CD writer Yamaha CRW2460,and CAF.

In AudioMode there is no problem:
- I write some files.aif from my HD to my CD
- I copy correctly my files.aif(avr) from my CD to
my HD.
- I have to convert the files.avr to files.aif with
the shareware program 5to5,because CAF works
only with files.aif

The problem appears when I want to archive some datas
in multissession.
I proceed like this :
1- I put on my HD for example,the files fileA.aif and fileA.all
in a folder folderA.don .
It seems the suffix of the folder is necessary ?
2- I open CDRecorderPro,then 2 windows appear:
- the checklist of my HD
- New.CD empty
I put my folderA.don in the New.CD window(drag and drop),
then a other window appears,DataTracks.
There is my folderA.don in the 3 windows.
3- I record on a virgin CD,with no option "no more session",because
I 'm going to continue to record other sessions latter.
At the end of writing this first session,there is the message
" closing session",why ?
I hope it's not about multissesiion,but about current session ?
4- I check my CD,with the command "read previous session"
I can see the previous session(the first session,folderA.don)
in grey color, on the New.CD window

HERE IS THE PROBLEM
5- Now,I want to copy this first session (folderA.don) from the CD
to my HD,is it possible (the multissession is not close) ?
I proceed like this,I use CDCopy,and with the tool CPX,I choose the
first session,then during the copy there is the message "error
while reading session".
I cannot copy my CD to my HD,what do you think about this ?

In second time I ask you about,how to continue the multissession !

Best regards J. Rypko

4793. Re: iCAB now available for 680x00 macintoshes

Newsgroup: comp.sys.atari.st
Date: 1999-03-18 00:00:00 UTC
From: Dennis Vermeire <dennis.vermeire@ping.be>
Message-ID: <921767924-17384AEicMi@ping.be>
Source record: 82430

>Nope iCab has nothing to do with Atari.
Most of the time I tend to disagree with the opinions of Martin and Katherine in this group but just for once -) I fully agree.....

The release of iCab if of NO relevance to a Atari user. With a Atari user I mean everyone who runs TOS, MagiC and MiNT on his system. Every Atari user has been silently hoping that CAB 2.8 (or whatever) would have seen the light of day.....instead we're getting iCab smacked around our ears and I for one fail to see what is good about this ?

>It's a Mac software of which no serious Mac user will think to use it.
>Why should they?
Yes, why ? Compared to what is available on the Mac platform, iCab has a long way to go.
I asked around to hear a couple of views from Apple users (Atarians who deserted), none have ever heard of it, and when they downloaded the demo version they asked me if this was a early 1st April joke.....

>I only hope that the lattest Cab-for-atari version isn't the last one he
>has make for the Atari.
So do I, and probably everyone here. What options have we got? There's no substitute for the moment.....Wensuite is a distaster and Draconis still is buggy and crappy after two years of development....

Come to think of it, since Cab 2.5 Alexander Claus hasn't done much to the program really, the updates included new clients like FiFi and Teli and improved modules/hotlist, but most of this was not even done by him.

>Long life to Atari/Mac contributions ... it exist ...
It does not.... Papyrus, Kobold, Phoenix, X-act etc... are programs which have enough merits to become a succes on other platforms. iCab is not good enough. If I was a Mac user I certainly wouldn't buy it, even if it was free there's still no reason to use it compared to the other concurrents.

>I think Alexander could really improve the graphic side of CAB as he
>made for iCab ... and I hope he will do ...
The graphic side of CAB is OK when viewed with a graphic card, I can think of a lot of other things wich need to be improved....

> Let's time make its work.
And if there's one thing we haven't got... it's time, each month a couple of hundred Atari users switch to another platform. You seem to forget that we are a dying breed......

Together with NVDI, CAB is probably one of the most widespread commercial programs among Atari users. Supposing the 2B's would say goodby to our platform, that would send a shockwave also, but at least they would leave

us with a near perfect product. In the case of CAB this is not the case. I've bought CAB from version 2.0 onwards, and supported this program via buying the updates (most of the time, a lot of money for very little), I expect a bit of loyalty also....for all I care, he may write a PC version, just as long as he doesn't forget who made it all possible in the first place.......us, CAB 2.7 is a unfinished product, I would at least like to see a improvement, a decent CAB.OVL file and a browser which can access all webpages is the minimum one can ask for. And I'm not talking about Java applets or cascading style sheets here.....

Maybe ASH will suprise us with a complete different browser, like they did when Ease was dropped in favour of Jinnee, but I have strong doubts about this. Somehow I even think Alexander Claus has fallen out with ASH, they don't distribute iCab and since they sell a lot of Mac software this is very strange.

>My article has a least one merit: it makes you speak about both machines
This is a newsgroup dedicated to Atari, if you want to speak about other machines you should post in comp.sys.mac, I'm sure you'll get some very unexpected reactions there.
If someone would shout here that the PC version of Papyrus runs like a dream on his system, he would get the same reaction, so Jo don't take this personal, but what did you expect, really ?

>Talking about it, is like pushing the nail even deeper.
Yes thats what it is, I couldn't put it better.
Each time I see the word iCab, I get a strange urge, and must run to the nearest toilet (and it's not from drinking Finnish beer !!)

Cheers from Belgium

Dennis

PS: call me a egocentric and unfair person, but I really hope that iCab becomes one BIG GIGANTIC flop, maybe just maybe, Claus will return to platform where his roots are.....Atari

When it comes to pure MIDI, there is not much improvement in upgrading
an 4Mb STE with Cubase 3.0 to a TT really, except for a better/faster
display. I suppose the same would go for an even faster machine. If all
you do is MIDI, IMO the upgrade to a Milan is not useful unless you want
to use the computer for net access/DTP/graphic design/word processing.
MIDI on it's own doesn't justify a faster CPU.

>
Hi Tim,

well, you could call it a SUPER TOS machine... Whether or not it will be
the better choice as a Midi machine remains to be seen. I have no clues to
how the regular Midi apps run on a Midi-equipped Milan...

For the Atarian with an STfm, Mega-ST, even a Mega-STe it offers a lot
more: first of, the graphics improvement. When you can run higher rez even
in lotsa colors, the old ATari's quickly forgotten. Even the basic 040
model offers a tremendous speed increase compared to the old bunch.
Coming from a TT with decent GFX card the 040 is no option for me, I'm
going for the 060 model or (if it ever sees the light) the 060 Phenix.
Fitted with at least 64 megs of RAM, SCSI-card, decent GFX and a 17" or
more monitor. Don't need Midi or bla-bla sound.

To be honest, I entered a PC-private project from my employer: giving up 4-
5 holidays a year during a 3-year period I might get a P-II 350 MHz, 6 gig
drive, CD-ROM, W-95 (burp!), Word and Excel. If the project's not
cancelled I probably wipe out the HD, install Linux and LookingGlass and
use that machine for Internet access.

But my TT will eventually be followed up by either a Milan-060 or Phenix-
060, that's for sure!

Dennis Vermeire <dennis.vermeire@ping.be> wrote:

> The release of iCab if of NO relevance to a Atari user. With a Atari user

Well, the release of iCAB probably means the end of CAB, so I believe it's
very relevant...

> So do I, and probably everyone here. What options have we got? There's no
> substitute for the moment.....Wensuite is a distaster and Draconis still

Imagine a highly component-based web-browser, where every module is a
MagiC6-style shared library. The http-, ftp-, pop-, smpt- etc. clients in
separate modules. The HTML-parser in another. The HTML-renderer in a
third. A Java- or VB-script module etc. Because these are shared libraries
that means that you can launch as many instances you need, so you can have
several entire browsers running at the same time, where each of these runs
several instances of the net-modules and graphics-/render-modules to
optimize net-access and CPU-usage. And you'll only need to load a very
small binary each time :-)

This would work with MagiC, MiNT, Geneva and TOS, and because of it's
modularity and OO-approach it can be implemented in any language and by
many individuals. Need support for yet another TCP/IP-stack? No problem,
just write new net-SLbs...

>>Long life to Atari/Mac contributions ... it exist ...
> It does not.... Papyrus, Kobold, Phoenix, X-act etc... are programs which
> have enough merits to become a succes on other platforms. iCab is not good

One very good reason to embrace opensource software :-)

I will not, sorry. But I promise to not speak again about Mac products
... I don't want to make you all become mad.

>If someone would shout here that the PC version of Papyrus runs like a
>dream on his system, he would get the same reaction, so Jo don't take this
>personal, but what did you expect, really ?

Firstly, don't mix up two very different silicium things: PCs and Macs
...
Secondly ... nothing, I'm used to expect nothing from nobody ... computer is
pure void matter.

>>Talking about it, is like pushing the nail even deeper.
>Yes thats what it is, I couldn't put it better.
>Each time I see the word iCab, I get a strange urge, and must run to the
>nearest toilet (and it's not from drinking Finnish beer !!)

When I saw iCab for the first time I was charmed by its look ...
And I never drink beer or anything alcoholized ...
That's all ... for the moment I try to avoid toilets because I only
need them for defecating purposes.
Nevertheless I like to speak with you about any computer ... only
because it's pure void matter I suppose !

>PS: call me a egocentric and unfair person, but I really hope that iCab
>becomes one BIG GIGANTIC flop, maybe just maybe, Claus will return to
>platform where his roots are.....Atari

That's the most interesting thing I have read about the subject Dennis
... perhaps, you also could become a good gaudy like Katherine is ...
Oh ... I forgot ... Katherine ... well ... hum... how to announce that
? ... I have bought an old Mac four weeks ago ... just to confirm you
are the gaudy I'm speaking about ... Nevertheless it is just beside my
good old TT030 ... which has a real net connection ... the mac doesn't
... already :)
And about Alexander Clauss now: don't expect him to return to the
atari computer he owns a Mac since a while ...

I love you both my gaudies !

Jo

Sorry, but I can't resist from putting a word here :-))) I must say, I
had a good laugh, because I've never seen such a big number of stupid
answers to a completely normal question. One asks if MagiC memory
limitation for processes is broken (is it? no clue... I use MiNT and the
mem limit is not broken there), then gets back a couple of hack-like
"solutions" like: run another memory hog first, run ramdisk, ... gosh.

Brian, if the memory limitation does not work for you in MagiC, go
asking and complaining ASH and/or Andreas Kromke. They are obliged to
help you, because buying MagiC you PAID FOR THE SUPPORT, didn't you?

And, if you use Thing desktop by any chance, try that: highlight the
PRG file and go to the "Show information" dialog, now select "Program",
and there you should have a field "MagiC memory limit". If it does not
work, hum... contact your dealer. :-)

Jaques Rypko <rypko@lal.in2p3.fr> wrote on 18-03-99 :

Hi Jaques,

>Could you help me about CDRecorder2 ?
>SoundPool is not very cooperatif !
We'll try, but to be honest I don't really know what you mean, I've read
your posting a couple of times and now even I am getting a bit confused:

>In AudioMode there is no problem:
> - I write some files.aif from my HD to my CD
> - I copy correctly my files.aif(avr) from my CD to
> my HD.
> - I have to convert the files.avr to files.aif with
> the shareware program 5to5,because CAF works
> only with files.aif
What are you talking about here ? a data CD or a Music CD ?
If its a data CD there is no need to convert anything, If it's a music CD
CD RECORDER Audio converts them automatic.

>The problem appears when I want to archive some datas
>in multissession.
>I proceed like this :
>1- I put on my HD for example,the files fileA.aif and fileA.all
> in a folder folderA.don .
> It seems the suffix of the folder is necessary ?
NO, a folder does not need a suffix, FOLDERA is enough.....

>2- I open CDRecorderPro,then 2 windows appear:
> - the checklist of my HD
> - New.CD empty
> I put my folderA.don in the New.CD window(drag and drop),
> then a other window appears,DataTracks.
> There is my folderA.don in the 3 windows.
Yes, this is the right procedure.....

>3- I record on a virgin CD,with no option "no more session",because
> I 'm going to continue to record other sessions latter.
> At the end of writing this first session,there is the message
> " closing session",why ?
This is normal, after burning a session, no matter what session, the CD
has to do some "internals" like writing the directory and FATs

>4- I check my CD,with the command "read previous session"
> I can see the previous session(the first session,folderA.don)
> in grey color, on the New.CD window

This is also normal, though if its the first session you should be able to see it with ANY CD player or even a fileselector.

> HERE IS THE PROBLEM
YES, also for me, cause I don't know what you mean.....

>5- Now,I want to copy this first session (folderA.don) from the CD
> to my HD,is it possible (the multissession is not close) ?
> I proceed like this,I use CDCopy,and with the tool CPX,I choose the
> first session,then during the copy there is the message "error
> while reading session".
You should not use CD COPY, this is meant to copy Music Cds NOT data CDs. besides, CDCOPY makes a IMAGE of the CD, ready to burn....

You do NOT need the CPX tool, this is only of use when you want to see or copy earlier sessions, since there is only one session on the CD, the CPX has NO function, it will show you session 1 and nothing else, cause there is nothing else....
The error message you get is normal, the CPX can't access a session which isn't there....

> I cannot copy my CD to my HD,what do you think about this ?
I don't know..... Perhaps spring is in the air... If you want to copy your CD just pop it in the CDR or CDrecorder drag the icon to the harddisk and drop..... that should do it....))))

> In second time I ask you about,how to continue the multissession !
Please don't.... Lets get this mess solved first. I have a feeling that my answers will not give you a solution.....
In the next posting, give us a clue how your CONFIG.SYS looks like and what versions of CDrecorder Pro you are using...
The current version is 2.36 and the SCSI_CD.BOS should be 27Kb big, if not go to http://www.soundpool.de and download the latest version.

Good Luck

Cheers from Belgium

Dennis

No news :->

Can't help with CAF, not avaiable here.
But i have the same recoder and the same expensiv recording
software..

> There is my folderA.don in the 3 windows.

Why do you use folder with .extension?
Folder name: "fdfd" looks ok, no extension needed.

>3- I record on a virgin CD,with no option "no more session",because
> I 'm going to continue to record other sessions latter.
> At the end of writing this first session,there is the message
> " closing session",why ?

Hm, can't follow that. If i create a single session, i wrot to cd
and finish. Nur further questions. If i create a cd with more sessions, software
asks for finsh the cd or to create more sessions.

>5- Now,I want to copy this first session (folderA.don) from the CD
> to my HD,is it possible (the multissession is not close) ?

Sure you have access to a open session? If the cd isn't closed, some
errors apears !?
I use the latest release (disk version)

>is buggy and crappy after two years of development....

Yep, Wensuite is just a joke. I disagree about Draconis. It has indeed
still lots of bugs but it makes progress which can't be said of Wensuite.
The pro version of the Adamas package which should be ready just in time
for the forthcoming Neuss-fair will support Java-script. At least that's
is what the advertissement says. The package will also holds a FTP-client
and Telnet client.
I hope that the programmer will support someday MiNTnet and/or STing.

>>I think Alexander could really improve the graphic side of CAB as he
>>made for iCab ... and I hope he will do ...
>The graphic side of CAB is OK when viewed with a graphic card, I can think
>of a lot of other things wich need to be improved....

The display is rather good but not the display speed. It takes sometimes
quit some time before a picture is displayed, even on a Hades 060.
I only wonder if iCab does a better job like Jo says? Can it be that it is
just subjective. A TT030 can't be compared with a fast Mac.

>a decent CAB.OVL file and a browser which can access
>all webpages is the minimum one can ask for. And I'm not talking about
>Java applets or cascading style sheets here.....

You're speaking about the native cab.ovl aren't you? This is indeed not
good but what about Dan Ackerman's STing.ovl or the MiNtnet.ovl? They are
(almost) perfect.

I was quit about it for some time.
Now I have a new hardware setup and have tried toget something to work

because of enough disk-space (a clean one with 512 MB) I decided to
give the BIG installation a try.

And I managed. Things looked OK.
I put N.AES on with Thing desktop and had a go at it with a reboot.

Indeed I was asked this time for: login
I managed to set a password. I managed to get N.AES going.
And desktop Thing plopped up.

Things seem to work so far.

But the Law of Conservation of Horror:
the big b/w TT-screen stopped being usefull.
I switched over to TT color VGA Atari Monitor.
And: Thing desktop gives bus-error as soon as I activate the menu
'Extra'.

Carried another heavy b/w monitor from cellar to attick.
No problem with menu 'Extra' from Thing.

What is going on now?

I do need to read manuals I fear.

Try to post something about Atari in a Mac or pc group and looks what
you'll get in return.
Really this is an Atari group and not Mac or pc.

>are the gaudy I'm speaking about ... Nevertheless it is just beside my
>good old TT030 ... which has a real net connection ... the mac doesn't
>... already :)

Howlong will it take before your Mac is online? One week, one month? Once
you get the right cable you'll certainly use your Mac to go online.
Once you will use your mac for this you'll forget Cab, Popwatch,
Newswatch, Okami, etc..
I can't blame you for that. The Mac is faster then a TT030 and offers very
good soft.

>And about Alexander Clauss now: don't expect him to return to the
>atari computer he owns a Mac since a while ...

Fortunately there are still some people with Mac's who develops very nice
soft for the Atari.
BTW: I don't think this is the real reason. There must be something else.

My response was based on the assumption that Brian had tried "everything
else" to limit the amount of memory PageStream grabs, and was looking
for a simple workaround (or what could potentially be one).

What is Andreas Kromke supposed to do -- rewrite PageStream so that it
"behaves" under MagiC?

OK, you use MiNT, but do you use PageStream under MiNT/Thing? Are you
speaking from first-hand PageStream experience? You're not clear on this
important distinction.

> What is Andreas Kromke supposed to do -- rewrite PageStream so > that it
> "behaves" under MagiC?

He is supposed to find a bug in MagiC memory limitation mechanism (if one exist and Brian really tried to limit the mem well) and fix it. If a program "hogs all the memory", that means, that it just explicitly or implicitly requested the memory (that it is hogging) from the operating system. If the memory usage is limited, the OS shouldn't grant a process more memory than the limit set.

The PageStream (or any other program) can not find a way to allocate memory out of the system control, just because there's no such way. If it does (allocates memory over the limit), that means that the OS memory management is broken.

Really no surprise though because MagiC 6 is known to contain more bugs than actual code.

> ExtedDos Pro, ICD HD utilities.

Hello Sam,
yes unfortantly that is what is going to happen.
I have lots of reasons for closing,
1) ASH. I know it sounds dumb, but I have never recieved any feedback, comments, any "thanks for all the work" or anything about my page. ASF on the other hand (Application Systems France) have been very nice. I just feel that ASH doesnt aprove of my page or something. Maybe Im being selfish, but I feel that if Im going to support ASH, which sells COMMERCIAL products, they could at least.. I dont know. It all comes down to, MiNT costs nothing. If there is a support site out there, it probably should be for MiNT. Is it not ASH's job to support its own products?

2) Time of course.. I have recieved these huge headaches lately, I can not take watching Atari Users bicker over small things about which OS is better, how it's a crime to use another computer if its not atari compatable and so forth. I liked Atari mostly because of the users.. they were like a family. Owning an Atari is like being a member of this amazing club that has enormous benifets. Lately though, all I hear is how this and this sucks, such and such is better...

Please everyone who supports my page, it has nothing to do with you . I recieve Soooo Much Positive feedback that it really motivates me, I have always wanted to learn how to program and make some killer GEM apps, and maybe Ill do that now. Maintaining a web page really takes a lot of effort (dont let anyone tell you different, if they do .. then.. well.. maybe Im just stupid then). I know I have people who visit my page on daily basis, so I feel bad If it goes unupdated for a day, I feel like I let you guys down. This feeling, and all the other stress that is in my life right now.. aurgh, I can't even describe it. Its my graduating year of high school, I only will have 85 credits (you need 100 to graduate, 90 to get to the ceremony) so I am taking 3 classes out of school just so I will graduate in time. My Dad is flying down for graduation, my girlfriends grandmother is. I can't let these people down, what if I wont even be able to go to the ceremony.. that will be terriable.

I better stop rambling on, the point it, I am not leaving the Atari, I never will, I just cant handle everything in my life right now.
I hope everyone understands, if you don't , well neither do I soo..

Bengy

What exactly would you like to know? What do you believe is being kept such
a big secret. Very reliable sources have contacted me telling me that a new
CAB is already finished or almost finished and will be released soon. Many
developments are still underway involving Iconnect and the CAB package.
//believe me//
>
> But at least we now know why we haven`t seen anything from Alexander Clauss

>>platform where his roots are.....Atari
>
> I am with you on this one.

Im sorry, but I do not agree with you guys here. I would never wish anyone
failure. Obviously the people involved in iCab have spent lots of precious
time and invested a lot of money into the project. I find it hard to
believe that if iCab did fail that he would "return" to the atari world. no
one could possibly know what outcomes iCAB flopping could have. It might

force him into suicide, who knows, but I do wish him luck. After all, if it were me in his shoes, I would not want people wishing the my program failed..

> Please,- will someone with some inside knowledge stand forward and
> enlighten us all? Why does it always have to be a secret what`s going on?

Once again, what exactly are you confused about?

Beware: there are different terminator resistors in existence.
Some are symetrically but mostly not.
Tehy can come in 9-pin, 10-pin and even 8-pin.
I have an 8-pin in hand. One pin (most left one) is marked with a dot
and marked 221/331

Now I have here a 10-pins
Marked with a stripe on one side. Also I decypher: 10A5 221/331 G
DALE X51X

Those numbers? Was it not a good habit to give lines a neutral
voltage by using 220 Ohm to ground with 330 Ohm to +5V?

So that would mean that those terminator resistor packages need a 0
and a 5 V?

Met vriendelijke groet,
Ronald van der Kamp

Nick Ripleywrote on 19-03-99:

> BTW the hold up is NOT on this
>side of the channel I've been ready with my contributions for months!
Well, you better throw them away..... according to R.O.M they need all their precious time to get PAPYRUS OFFICE ready. So the translations have just been a waist of time, energy and effort. Not that R.O.M cares mind you. I personally think they just don't give a shit about the rest of the world..... Like most German softwarehouses they seem to be just interested in their native market (Germany).

If there is one softwarehouse that is a example that it doesn't care about "foreign" customers it must be them. If ever a English Papyrus would see the light of day, I for one would think very deeply before spending money on it...support is non-existing and it takes at least three years before they update.

Translating the RSC-files is no good either, because they constantly update the program (which is good), you're always a RSC behind....

They don't even care to release a English WINDOWS version of Papyrus, so why should WE (Atari) expect something from them ?

>It is very good... word 97 import and export etc
Well the PC-world has moved on to WORD 8.0 docs, these are a nono on the current Papyrys. Take away the Word module and the ability to print in color and what have you got left?
A very slow and slugglish wordprocessor; try reformatting a 100 page document, try spell correction on that doc, try loading a dictionary containing 2500000 words (1.5Mb) and you'll see what I mean. If you have a dog, you can take him out for a very LONG walk.....
Try to print to a paperformat which is not supported by NVDI....
Load a fully html 3.2 compliant file, do nothing with it, save it and look what happened to it.....
Try to produce a three page document, page 1 containing 4 columns, a simple head and foot, page 2 containing 1 head and 2 colums of a different size, page 3 is a exact copy from page 1 but without the head and foot..
Try to make a..... etc...
I can go on forever here....-)))

>My cheque book is open and waiting.
I suggest You close it....and let the dust settle.
This year another German wordprocessor will see the light of day, and this one deserves the name wordprocessor ==> TEMPUS WORD from CCD.
Yes, I know its not available right now, but so is Papyrus, they are

both VAPOURWARE.....

Last week a guy from R.O.M posted here, his English was very good (much better then mine), so it's not that there is no one there who has the ability to do a English translation, perhaps they think that the market is not big enough for a English release ? Well, they should say so, instead of let us wait for nearly 3 years now.

One can keep a child quit, promising him goodies... I wonder how long its gonna take before the Atari community realises that R.O.M is doing exactly the same....promising goodies, which never arrive.... we've seen this before.....Atari was the leading example, and sadly we all know how that story ended.....

Cheers from Belgium

Dennis

PS: the French speaking community is also waiting, begging and hoping for a French Papyrus for years....nope

You shouldn't, move on.... there are COMPUTER controlled toilets now

>I love you both my gaudies !
I love you to ,but what the hell is a "gaudie"????

>And about Alexander Clauss now: don't expect him to return to the
>atari computer he owns a Mac since a while ...
Just like you, I don't expect anything. Personally though, I will think
twice before buying a product where he is in involved.....

>Firstly, don't mix up two very different silicium things: PCs and Macs
>...
Firstly, The only silicium I'm interested in is Atari silicium, I'm a
Atari user and apart from the office I never touch PCs and Macs. At the
firm I work they've got VOLVO trucks, does that mean I've got to sell my
car and buy a truck ??
As long as the Atari Platform exists, I'll be here, on a Atari and if my
machine is ready for a funeral I'll probably have a look at the Milan,
Hades or perhaps the Phoenix.

I run Atari on Atari, Mac on a Mac and PC on a PC....and that's the way it should be done. When you mix two different kinds of silicium, you end up with very crummy silicium....

>Secondly ... nothing, I'm used to expect nothing from nobody ...
>computer is pure void matter.
THIS remark hurts, you know perfectly well that nearly every one who post in this group gets help. The last time you had a problem (modemcable), five people took time for you, adviced you and guided you....
Try this in a PC or Mac group......that's the place where you've got to expect nothing from nobody.
Computer may be pure void matter, but people are not. And that's what this group is all about.....people, strangers in fact helping each other out, solving a problem.....if the real world would be anything like the people in this group, you would have A PERFECT COMMUNITY.....
BTW: why do you constantly help people here? If you think that it's only pure void matter, please explain ?

Cheers from Belgium

Dennis

>anyway but still my Cubase disks are damaged. Perhaps someone out there
>has an original Cubase for Atari St's for sale somewhere.

Without going into a discussion about you morality, I'm sure some others
here will do this..... A virus doesn't go away just like that, once a
disk gets infected, its just a question of time before all the others
get infected also.... Have you checked the disks where you keep your
midi files on? The only way to prevent a virus spreading is to keep ALL
your disks write protected and get a GOOD viruskiller, checking EVERY
disk you have got.
So, instead of asking a cracked cubase, you better start asking for a
cracked viruskiller first?

Cheers

I know perfectly well I always received help and efficient help from
very nice people here ... but help in this matter is pure illusion.

>Computer may be pure void matter, but people are not.

That's what you think Dennis ... ultimately they are, as everything.

>And that's what
>this group is all about.....people, strangers in fact helping each other
>out, solving a problem.....if the real world would be anything like the
>people in this group, you would have A PERFECT COMMUNITY.....

Computer community is the best example to show we can hold on illusion
... but IT's DEFINITELY FUN and that's why we are here hey ?

>BTW: why do you constantly help people here? If you think that it's only
>pure void matter, please explain ?

For fun and spend some good time with virtual friends ...
But this is only a relative dimension of phenomenons.
Perhaps will I have to avoid to speak about ultimative dimension of
phenomenons ... In fact I must be very carefull with my "illusion"
friends ... especially with Katherine ... she is so MINT sensible ...

>Cheers from nowhere ;)

Gaudy:
!!!!!!!!!!!!!!!!

My intention was to use "prophet" like word ... I did not succeed
because I read "voyant" in french and translate it too fast ...
There is no sense if I continue to use this word ...
Please replace the faulty "gaudy" by "prophet !

And, of course, I apologize for this fault ...

I saw an Atari XE65 in a shop today, never having seen one before.
This is probably the wrong newsgroup, but it does look like a miniature
Atari ST ;-)

What is it exactly?, what is is capable of, and is it rare ?
The computer in question looked in a new condition and had an external PSU
with it but nothing else.

I assume it's an 8 bit Atari, with 64K RAM but more info would be
appreciated.

Thanks,

Regards,

Clockmeister.

That`s really good news.
Well, exact informaition is always good. But I was thinking more in the line of
all the rumours there use to be in this NG. There use to be a lot of talking about new
project,- new applications and so on. Now it seems to me, that one part of the users
nagging on the other part. Reminds me of a Amiga NG I once had a look into!

>> I am with you on this one.

OK, I might have been a little quick on this one.
>
>Im sorry, but I do not agree with you guys here. I would never wish anyone
>failure.

Neigther do I.

>Once again, what exactly are you confused about?

Again, I`m nor confuced, I just want the people in here to talk about what good they can do
with our computer of choice. What dreams they have for new programs.

BTW, I`m sorry to read that you are closing your site. But as some has pointed out,
your graduation comes first, by all means.

I hope you leave it there, even if you do not have time to maintain it. It has a lot of
usefull information, and it is a pretty good design. I really like it.

Internal terminator? Never thought about. I look at the back and see
only a rotating switch for SCSI-id and a on/of switch labeled
cryptically SW. That one is ON.
But I have an external terminator in it.

>The local Epson Service Center told me to make sure that the Epson was

4859. harddisk help

Newsgroup: comp.sys.atari.st
Date: 1999-03-19 00:00:00 UTC
From: herbertb@knoware.nl
Message-ID: <36f29b77.34673096@news.knoware.nl>
Source record: 82326

I have three 1040 STs and two 30 MB harddisks. Both harddisks spin along fine, but none of the STs discovers any of the harddisks - I get no icon on the screen, let alone a window with files and folders. One harddisk and its cable have worked for some time, but they quit after I erased some files to make room on the disk.

Is it possible that I erased one file too many? If so, how do I put it back when I can't get to the disk? Is there an installation program or something, that someone can mail to me? Or should the disks work anyhow, and must I assume something else went wrong and the disks are kaputt?

Thanks for helping out.

With a decent desktop you won't need that acc at all. With Thing and
Jinnee you can limit the memory of a particular prg.

Agree with you. With 4.x I could print htm page via Cab without any
problem. Now with v5.01 Cab complaints about not enough memory on drive J
and abort printing. I've 300 MB free on that disk.
A time ago I've added more RAM to my system. With 64 MB I could print 300
dpi greyscale on a laserprinter but no 600 dpi greyscale.
Do you know that printing in 300 dpi greyscale took almost 40 MB RAM. At
least that is what happens on my system.

I do know someone who couldn't install HD-driver 7.x on his Hades. However
I never have encounter any prob. HD-Driver 7.6 works very fine here.

>Woller Systeme is the publisher, but like almost any other German

>Germans that are very supportive (like Uwe Seimet and most of the
>free/shareware-authors), but so far my experiences with German dealers has
>been very discouraging.

Unfortunately I must agree with your statement. It seems to be a common
disease of the German dealers.
Sometimes it help if you say that they may reply in German. Because the
German language and my native language, Flemisch, has lots of simularities
I can read reasonable well German but I understand that the most of you
doesn't understand a single word German.

>As for your memory-limit problem with MagiC6 I really can't help you, but I do
>remember having some problems with limiting memory for 1ST Word Plus under
>MagiC4. I stopped using 1ST Word Plus under MagiC for other reasons though, so
>I didn't investigate any further.

1st Word Plus and some other old and even newer soft (Calamus SL 98) takes
all the memory they can take. If you system has 128 MB RAM then they will
take all the free memory.
The alternative desktop Thing can limited the memory comsumption very
easily.

Go to the menu "extra/applications", select "new". Now click on the
"program" buttom. You'll get now the fileselector. Select the program
you'd like to limit. After you've done that you will get access to the
"options menu". In this menu you'll see at the bottom a field called
"memory limit" or something like that. Fill in here the memory you want
to allocate to the prog.
That's all. Don't forget to save ofcourse.

It's not a bug. This is mentioned in the Cubase manual - when you are
about to record audio Cubase creates a "dummy" file as big as the whole
partition. It is being deleted either when you change track or quit the
program. You should not reboot you machine before quitting Cubase.

Hello Dennis,

dv> We're not deaf, dumb and blind.
? Are you sure?

You are using MagiC?! Than these thoughts are not that far away I suppose.

REMEMBER: "Only N.AES makes the crippled walk, the blind see and the
Atarians
use fast and modern systems, from now on to eternity."

(written in the "Holy Book of Tramiel", from the unwritten chapters)

BTW: Look also at the 11th commandment: "You shall not use other OS's than

N.AES or burn in hell forever."

I am *really* upset that you didn't know these golden rules of
comp.sys.atari.st - how disgusting ...

PS: To those who may not notice: >>;->>

Greetings, Oliver

We are N.AES - Resistance is futile!

We all like to see a major upgrade of CAB, with at least most of the features from that unspoken browser :-((

>Maybe ASH will suprise us with a complete different browser, like they did
>when Ease was dropped in favour of Jinnee, but I have strong doubts about
>this. Somehow I even think Alexander Claus has fallen out with ASH, they
>don't distribute iCab and since they sell a lot of Mac software this is
>very strange.

You could be right here. Maybe a completely new browser from someone else.
We can only hope the best for the future.

The strange thing is that Oliver Joppich, the man behind iCAB company is/was a ASH employe or whatever. Don`t know if he left ASH or just has his own little firm alongside working for ASH?

This leaves room for at lot of speculations in this NG.
If someone, with a little inside information, just can leak some info about what`s going on, but nobody seems to know anything or be willing to do so.

But at least we now know why we haven`t seen anything from Alexander Clauss in this NG the last year or so.

>PS: call me a egocentric and unfair person, but I really hope that iCab
>becomes one BIG GIGANTIC flop, maybe just maybe, Claus will return to
>platform where his roots are.....Atari

I am with you on this one.

Please,- will someone with some inside knowledge stand forward and enlighten us all? Why does it always have to be a secret what`s going on?

cheers

Joergen

>For many years the machine was used dayly for DTP.No problem until
>1/2 year ago with that scanner.
>But also I could not find fault with scanner: it was I suppose indeed
>the SCSI.
Do NOT use the terminator on the scanner, but use a external terminator,
which you plug in. I remember the first day I tried the scanner on my
TT, everything that could possibly go wrong...did -))
The local Epson Service Center told me to make sure that the Epson was
the last in the SCSI chain, in our case ID6 and do the termination as
explained above. Since then everything was fine.....
The day I bought a CD Writer, big problems again, SoundPool told me to
double terminate the Epson AND the internal harddisk....Since then all
is fine -)
So, I stopped doing it by the book, take five different TTs and you'll
get five different setups and five different termination solutions. I
gues its a bit a trial and error situation..That's what I like about
Atari....we're still in control -))))

Cheers from Belgium

From this answer I understand that ALL drives which require intiator
identification CAN NOT BOOT from a Atari?

On 18-03-99 Uwe Seimet wrote:
>There is one exception: If these drives are connected to a LINK96 or
>LINK97 adapter you can boot without any problems. The LINK96/97 is
>the only adapter that can do the trick.
From this answer I understand that EVERY drive will boot from a Atari,
providing its connected via a LINK96/97 ?

Please make you're mind up, this is getting very frustrating.....

Maybe it would be a good idea to include a textfile with the latest
release of HDDRIVER, stating the possible probs which certain drives,
and possible solutions.....
If Jos had gotten the info about the LINK96/97 a bit sooner it would
have saved him a lot of time and also some money....

Now up for bid at eBay (http://www.ebay.com):

Atari 600XL computer with the 1010 program recorder

View images and place your bid at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=80112212

This is a complete package with lots of extras. Here's what you get:

Atari 600XL computer
All required power packs, cables, switch boxes, etc.
Atari 1010 cassette program recorder/player
Data cord to connect player to computer and power cable
Original manuals for computer and cassette player
PointMaster joystick made by Discwasher
Three (3) Maxell 15-minute computer cassette tapes, brand new in the original wrappers
Three (3) Maxell 15-minute computer cassette tapes, used, containing a variety of programs
"Atari BASIC" booklet
"31 New Atari Computer Programs for Home, School Office" book, 96-pages, $8.95 cover price
"Your Atari Computer" book, 458 pages

>answers to a completely normal question. One asks if MagiC memory
>limitation for processes is broken (is it? no clue... I use MiNT and the
>mem limit is not broken there), then gets back a couple of hack-like
>"solutions" like: run another memory hog first, run ramdisk, ... gosh.

Yes...I asked if anyone knew of a memory hog program for a 'temporary'
solution...so I can go on with my work untill I isolate the problem and
have it fixed. I may be doing something wrong! But I also see that
MagiC 6 and NVDI 5 have made some changes that are causing loads of
people problems like mine. So they may have made some mistakes on
MagiC 6...at least they are chruning out some pretty good software at
pretty fast rates...and it's not very high priced for the quality. It
happens...heck, I've gotten some awful releases of the MiNT kernel as
well. And PLEASE don't let me get started on my nightmares with
Windows and Mac software. That's software in reality (the ideal would
be nice...but I've never seen that in computer world).

First...I use MINT as well...
I also have Geneva...
And decided to give MagiC a try as well...

Next...So FAR I really LIKE MagiC very much...
YES, it has QURIKS and such...
So does MiNT!!! So does Geneva!!!
None of them are perfect.

I've only used MagiC a few days now...
I can see that this Version 6 may be a lemon of sorts, due a lot of
fixes...but I can also see it's DAMN fast compared to my MiNT and
Geneva setups! As for 'online' support...isn't that what the groups
are for? I'd rather get tips and uploads right here on the spot than
have to call all over the world and wait months at a time (and people
here on the groups HAVE been VERY supportive on most ALL of my Atari
software questions).

NOW...I really wanted to get N_AES, but after months of searching, I
never could find a place to buy it from! I finally found a GERMAN web
site that distributes it, but they'd NO telephone number, and I can't
speak german anyway. I sent about 6 emails to them...no response.
I posted HERE in these groups 5 or six times asking if anyone could put
me in touch with a place that would sell me N_AES, preferably via VISA
order in encrypted email. No response there either (also asked on
mint@fishpool.com a few times).

>Brian, if the memory limitation does not work for you in MagiC, go
>asking and complaining ASH and/or Andreas Kromke. They are obliged to
>help you, because buying MagiC you PAID FOR THE SUPPORT, didn't you?

I agree with you here....
The trick is...
It's a GERMAN product, with NOT VERY GOOD English support, and I KNEW
THIS when I decided to purchase it. I'm not HIGHLY upset at my MagiC
problems thus far...Over All...it's a VERY FINE product, well worth the
120 clams paid for it (as is). It's just dang fast! MiNT may be as
well with a 'decent' AES...but I guess I'll never know *shrugs*.

>And, if you use Thing desktop by any chance, try that: highlight the
>PRG file and go to the "Show information" dialog, now select "Program",
>and there you should have a field "MagiC memory limit". If it does not
>work, hum... contact your dealer. :-)

I could call my dealer, and I'm sure he'd do all he can...
But at the same time...Atari Dealers are dropping like flys here in the
US! If I can't fix it here...I'll call him up and see what he can do,
but at the same time...I intend to let him keep the sale...as I know
how much hell the poor fellow had to go through to get his european
stock at all! Why did he bother? Cuz we've been hounding him to offer
all this stuff! And I must say, he's doing a fine job of expanding his
product line :)

Well...on the desktop...I really would like to use NeoDesk 4 to be honest.
I've grown used to it, and like its look and feel. My plan was to
eventually learn to write scipts and such for MagiC specific features not
supported by NeoDesk 4 (like is there a way to limit memory in the
set-up with GEMscript, or some sort of auto folder config?). It may
not be possible, but that was my plan. BTW, NeoDesk 4 seems to work
fine launched as shell, but I've not REALLY tried this much (yet).

Finally...can we have a little peace? I check out loads of Atari
software, free, commercial, and shareware (have registered quite a few).
Different set-ups seem to be better for different applications...
So far...MagiC is my favorite for 'general' ATARI desktop use...other
than a few QUIRKS that need to be ironed out. Maybe SOMEDAY I can find
a good ALL AROUND situation for my Falcon...but here's how it goes now.

MiNT - Neat for unix and compiling stuff (I'm not very good at this but
like to tinker). MiNT net offers some neat options like ICQ, RealAudio,
and other experimental projects (at this point), and it's a great
SERVER (not that I need one at present).

GENEVA - I'll hang on to this for my 2 color Music Set Up (CuBase
Audio), as its the only one that works with CAF. It's not bad as a
general desk-top system either, however, it's lagging behind, and lacks
a few of the new GEM calls that more and more programs seem to be using
these days, so I get loads of annoying error dialogs (yet the programs
still work fine most of the time)...it's also VERY slow on the internet
end of things (try to type in a form of CAB, or use a text editor like

Edith...we're talking SLOW keyboard routines, esp with STing loaded and doing its thing[which it does very well]). I liked GEneva on top of MiNT, but that's not a very stable mix it seems.

MagiC - It's FAST! What can I say? I'm sitting here running several apps, using STing and Newsie with Edith text editor...all SLUGGISH as hell under Geneva, or MiNT/AES4.1. I can finally use CAB to full potential...typing in dialogues/forms/etc. I'd some problems getting up and running (namely a UK keyboard map when I need US), but here on the groups, they were fixed in a few hours. Yay comp.sys.atari.st!

So please, don't intimidate us for asking questions about commercial software on these groups. Commercial software users can enjoy the same COMMUNITY atmosphere as free projectware like MiNT and such. And with the obvious sluggish ENGLISH support for MUCH of the modern Atari software...this is usually the best place to START.

Thanks
Brian

I have encountered a Monoterm colour monitor so they need not be mono.
That one was not willing to display any resolutions below 800x600 so
it wasn't that compatible at all. The Moniterm company isn't that well
represented on the net either so no specs are available.

NVDI5 in particular has been a disappointing experience so far. OK, it has some new, rather nifty functions (like dithering and plane-conversions), but printing is a complete disaster. The 4.x series are extremely stable and has never given my any problems of any kind.

> I can see that this Version 6 may be a lemon of sorts, due a lot of

I have never had any success with recent software version x.x0 ;-) NVDI 5.0 is a disaster, MagiC6.0 won't even install on my Falcon, HD-Driver 7.0, 7.10 and 7.50 all wrecked my C-partition after installation (but not 7.01 or 7.11...). I guess it pays off to be a bit patient and wait for the x.x1 bugfixed released ;-)

Woller Systeme is the publisher, but like almost any other German Atari-dealer they don't bother replying to non-german mails. There are some Germans that are very supportive (like Uwe Seimet and most of the free/shareware-authors), but so far my experiences with German dealers has been very discouraging.

If you want N.AES I suggest you contact your Milan-dealer (are there any in the US?), they ship Milans with N.AES pre-installed and should be able to sell you N.AES.

> still work fine most of the time)...it's also VERY slow on the internet
> end of things (try to type in a form of CAB, or use a text editor like

Hmm... I've been tinkering with the Geneva006-demo and STiNG on my MegaST, and didn't experience anything like this. However, Edith is a *extremely* slow and nasty editor and could very likely cause problems like this. I also had some similar problems with the PureC-editor under N.AES 1.1.0, but it turned out to be another program's fault (SpeedUp).

As for your memory-limit problem with MagiC6 I really can't help you, but I do remember having some problems with limiting memory for 1ST Word Plus under MagiC4. I stopped using 1ST Word Plus under MagiC for other reasons though, so I didn't investigate any further.

> everything else computer related.

I agree with Hallvard. Once a page is up and running, the main job is
just maintenance. Checking the links once a month, adding stuff here and
there. I don't update the Quick FAQ as much as I should, and the more
time goes by the less time I seem to have. Maybe that's got something to
do with getting older ;-) but time gets more an more precious.

The other solution, when you find that you have less time to support
something that is useful to other people, is to pass it on to someone. I
have done this in the past for web sites, and that is certainly what I
will do with Quick FAQ if ever I decide to let it go. Jo also did that
with the UTSI. That way, you get more free time, and the users stil get
the support they were used to.

In the meantime, as someone said, get your priorities right, and just
graduate!

If memory serves correctly...
There was a "Moniterm Viking" monitor that 'usually' came with a
graphics card for Mega ST machines. It fit on the mega expansion bus.
These were quite popular monitors for Pro Music studios...needing the
extra screen space for running massive studios remotely via MIDI
and other machine control codes.

If you've found one on the cheap somewhere, ask about the CARD for a
Mega ST expansion bus that 'may have' come with it. I don't know if
they ever did a Mega STe VME version of the card.

More modern solutions for BIG SCREEN atari, support high VGA
resolutions with millions of colors. Nova, CrazyDots, and Panther
(Offers one ISA slot for plugging in yer own card (if you can find one
with supporting drivers) come to mind, and there are others I forget.

Well I'm still using MagiC 5 so I can't answer that part of your question, but I still use Maxifile III (from CodeHead software) to set fast load, archive bit, and any other file attribute you can think of. And it's still the most useful file copying utility I've used even though it has some screen redraw problems in anything over 16 color mode on the Falcon, but there are ways around that too. :^)

>"can't create image". What do I need to do to correct this annoyance.

Under the "AUDIO" dropdown menu, make sure "USE WAVEFORMS" _is not_ checked.
Then after recording a track, the program won't even attempt to "create image"
(ie. create the waveforms: the graphic representations of your audio data
seen on the individual tracks in the arrange window and in the editors), thus
your problem should be solved - although you really won't be able to
graphically edit your parts unless you have the waveform there. However, all
is not lost because if you turn "USE WAVEFORMS" on again any time after
recording tracks, the program will create them for you after the fact.

Although there may be more wrong in your setup, since I have created rather
large AIF files myself (over 44 minutes). And while it took forever and a day
to "create image", it _did_ work.

Anyway, give it a try, and feel free to e-mail me if you have any other
questions - but make sure you remove the SPAM BLOCK first.

I agree...there is alot of bickering going on in this newsgroup.I felt
like unsubscribing many a time because it is not like it used to
be.After all,we all use the basics of an Atari or TOS system whether
you use MiNT,MagiC or whatever.

>Maintaining a web page really takes a lot of effort

Time.....not enough of it.I only have a small website but keeping it
updated can be very difficult.Never feel you have let anyone down.You
were not getting payed for creating and updating your site,you did it
because you love using Atari computers and the MagiC OS and feel you
can support it in some way.Your website the best website I have seen
in along time with so much useful information for the MagiC OS.In fact
when I had problems with MagiC you site was the first to visit and
quite often I would find what I am looking for.It is great shame to see
your site disappear but everyone needs to move on.

Perhaps PageStream breaks rules the way it handles memory? From my
experience with MagiC 5.11, limiting an application's memory usually
works fine. This is what makes me think PageStream does something
unconventional (or at least is interpreted as such by MagiC).

Hello,

I've been using the 2.01 crack (Oooh... arrest me =:)) And it did it's job fine. I've used Cubase3.01 as well and I loved it. But way too expensive. And getting a second hand one is hard. I wanted to buy the original with a friend but you only get one key so that wasn't a good solution. Well blame me for using cracks but I just can't afford legal versions. I don't know what virus or ... I had but I got rid off it anyway but still my Cubase disks are damaged. Perhaps someone out there has an original Cubase for Atari St's for sale somewhere.

Regards,

Arnaud.

>extremistic secret club ?

Extremistic secret club. Come on Jo, what's going on with you.
The Milan-, Hades- and the forthcoming Phoenix users are all supporting
the Atari. How many emulator users are supporting the Atari scene you
think? Not many. Oh yes, they do buy MagiCMac, MagicPC or whatever
emulator in the beginning but after a while the most (please note that
I've used 'the most') forget the Atari products. I can understand that Mac
users are more Atari-loyal then pc-users but how comes you think? The
price maybe of the soft? Yep, that's right, the price. Have you an idea
howmuch Photoshop, Quarkxpress or Filemaker Pro costs these days?
I always take my brother as an example. He was an Atari user during ten
years. Two years ago he bought himself a Performa 6300. Nowadays he has a
G3. Ofcourse he bought MagiCMac but does he use it? No very often. Only if
he uses Calamus SL 95. Do you really think he has bought new Atari soft
since he uses the Mac. No Jo, he didn't at all, with the exception of
MagiCMac but this was because he was forced too.
Now tell me Jo, who supports the Atari scene the most, the Magic-whatever user
or the guys of the *Extremistic secret club*?

>

Yep, but only one is the shortest.
How good the emulator will become it will always be an emulation. Beeing
so there will be always problems.

>friends ... especially with Katherine ... she is so MINT sensible ...

But she predicted very well your computer future, hasn't she.:-))

Hallvard:

I think your comments are well placed. Why should we become fanatical
on ATARI ONLY. Should we read the Bible only in it's original
languages of Greek and Hebrew? Or get different flavours of the same
thing as long as it is meaningful to us personally. Same with computer
Platforms in general . PC and Macs might be good for some areas.
Atari is good for the rest! (had to put that in!) Or how about using a
PC and Atari Together, just like the suggestion one user had..use
Atari for midi , and sync it to a PC for digital audio. I just read in
one of my Atari mags, that when Win 95 (called "Chicago" then) came out,
the feeling was that windows was finally catching up to what atari
computer users have been enjoying for ten years! Why be at war?

>#_ENV AVSERVER=EASE
>#_SCP C:\CLIPBRD
>#_ACC C:\
>#_APP C:\AUTO\APPS

No. After #_FLG... put:

#_APP C:\GEMSYS\MAGIC\START\ <-- folder for AVSERVER.APP
#_ENV PATH=;C:\BIN\;A:\
#_ENV HOME=C:\USER\
#_ENV AVSERVER=AVSERVER <-- if you only use MagicDesk
;#_ENV AVSERVER=JINNEEE/GEMINI/THING <-- or whichever you use.

I'm willing to be corrected, but that is my set-up, which works.

Cheers,
Charles.

Hey! "Stephen Moss" <sgm23@eng.cam.ac.uk>
>Can someone tell me the URL (address) of the ST Plus magazine web site as I
>appear to have misplaced it.

The official web pages of the Best ATARI Magazine (as voted for by the
ATARI Community) are
http://www.users.zetnet.co.uk/10s_Spot/stp/index.html

ST+ is still going strong and still produced every month of every
year, You can still get ST+ from just about any country in the world.

Hades, Milan and Falcon computers all have there own regular pages to
make up the PLUS in ST + :)

ST+ is 100% ATARI content and advertising is FREE

The ST+ Mailing list set up for the discussion of all things readable
about ATARI is as popular and healthy as ever

ST+ is now in its FOURTH YEAR!

It's on paper, It's 100% ATARI, It's released EVERY MONTH and it has
been voted as the best current ATARI magazine. ST+ is absolutely and
without exception a NON-Profit production, Master copies of the
publication are sent to overseas distributors making this a unique
system that negates the need for money being passed overseas and thus
speeds up the whole process and ensures no one ever runs out of back
issues.

Is there any reason not to read it ?

ST+Fanzine "Best ATARI Paper based magazine of 1998"
As voted for by the ATARI Community

>Are we becoming fanatical?

Let me explain why I'm fanatical.
Once I was a member of an Atari club. It was a very nice group. After a while some guys needed a new computer. They bought pc's with an Atari-emulator. So far no probs. What do you think what happened after some time? Instead of discussing Atari-related problems they start talking about the problems they had with Micro$oft products. Some had even the nerve to ask an illigal copie of Atari-soft that the few true (sorry for this word) Atarian left in the club still bought.
A year later the club was virtual a pc club. Sure the club had still the name to be an Atari-club but every meeting was about the pc.

That's exactly what I'm fearing if we start talking about other platforms. Today one pc/Mac-message, a year later one Atari-related message.

I don't have anything againts pc or Mac's or whatever platform. Someday I will buy me a G3 powerbook

I've been waiting to get a NEMESIS board for my Falcon since last August from the North American distributor (Alex at ATY Computer). He's at the mercy of Titan, who've been giving him the run around all this time. Well, I finally got Titan to answer an e-mail about it, and here's what they told me:

-=-=-=-=-=-=-=-

>Because of insufficient order quantities we are unable to produce new stocks
>of Nemesis. We are now concentrating on Tempest which will feature a minimum
>of 100MHz PowerPC processor. The PPC comes in a range of speeds up to 240MHz.
>
>Apologies if this inconvenienced you.
>
>Regards,David.

-=-=-=-=-=-=-=-

Not good. Not good at all. :^(

Anyone have a used (un-installed) NEMESIS for sale?

Lets put this in perspective please,

>We used to have such a nice atmosphere here, where *anyone* could get
>help no matter how new or experienced they were with this platform.
>Clearly a unique thing to this group, whereas in other groups
>dedicated to other platforms you often get ignored or get stupid
>comments.
I didn't realise that this has changed, looking back on the last three months of postings, I notice a lot of people asking for help and info, and I also notice that in almost 90% they did get it. Somehow I even think that the full 100% got it. Personally, I don't always reply via the newsgroup, if it is a question that most of us already know the solution to I reply by Personal mail. I think a lot of people do it this way....
So, at least this hasn't changed, and that surely is a good thing ??

What I also noticed is that during the last three months, there have been a lot of discussions, and I joined them regulary, I probably even started a war....
But, as far as wars go, it was all on "a above the pants" level. It probably looks terrible to someone joining this group without knowing what is going on. Each person here has his own style of writing, some are sarcastic, some right to the point, some blunt....etc
After a while you kind of know the person and also the way he/she going to react on a certain posting. Lets take me: if Martin writes I need a new brain, I know what he really means and take it with a lot of salt, but I suppose a outsider reading this will be shocked... The "war" here never really become personal attacks on someone, well I didn't notice any ??
All in all, these wars have some good sides also, nearly every posting contains a bit of information, just read them carefully and extract what is meaningfull. A war is aways finished in about 10 days, and I notice that people involved in a war, help each other out on a very friendly basis about a different topic, so how serious should we take the wars in this group?? I think the wars in this group are more a "exchange of views".....compared to wars in other groups and what is said and written there, we're like angels.....And if things would really get though and harch, I'm convinced that most here would call an end to it real quick.

>Anyway, the point is that I hope a mention of another platform won't be
>enough to dissolve this newsgroup's good, friendly atmosphere!
>A lot of newcomers, or ex-Atari users who have decided to give the old
>ST another go, come here in search of a little friendly advice.
>I'd hate to see them go just because we've started spending time flaming

>each other instead of helping each other.
Jo, announced iCAB is now available for the Mac, fine, I made a note of this. Knowing him a little bit I think the announcement was some kind of a teaser... Then someone reacts saying this has no relevance for the Atari user on a Atari/clone and Jo reacts again... the rest is history, but read the different postings good, there's a lot of info contained in them, we've found out that ASH is still working on CAB and that a new version in coming soon, we also got to know why Alexander Claus left this newsgroup, and look at Jo his latest posting he doesn't seem to be hurt in this war, he's enjoying it.....

But You are right when you write that newcomers reading all our crap may decide to leave and never come back.
I for one will think twice before reacting to a smart remark, not because it hurts me or I find it offensive but for the good of this group, and also (that's the real reason !!) I just don't have the time to sit here writing replies two hours a day.... Yesterday I wrote nine postings, and to be honest, half of them had no relevance at all.

>Let's keep the advocacy discussions in a group where it belongs, and
>keep discussing Atari related things here and not make a big deal of the
>odd slightly off-topic subject now and then (which is debatable anyway).
Yes I agree, and we had some nice off-topic subject also lately : Finnish beer, Ronalds Cat, Flying Pigs etc... just to name a few....

>I realize I'm sticking my neck out here, as I also posted some comments
>to the iCAB brower thread, and my comments here might bug someone, but I
>felt the need to speak my mind right now.
>And please, I have no intention of starting a new flame-war by this.
You're to late I'm afraid..... the war is nearly finished, maybe next time.....-))))

Cheers from Belgium

Dennis

PS: If all goes according to plan some of us will actually meet each other in REAL LIFE at the Atari Messe next month in Germany. I can't imagine we're going to start a row there, just like in this newsgroup we will all have a good time and be like old friends meeting each other. If we really hated each others guts.....

Assuming you have TOS < 2.xx:
Because it has worked, the only thing I can think of is that you
erased "DESKTOP.INF'
click menu options --> install devices and you have icons back
on the desktop, then click menu options --> save desktop.

> Is it possible that I erased one file too many? If so, how do I put it

>
Possible 1 piece, but all 5 in ene?

A 1040 works perfectly well without a harddisc.
It then boots from floppy.
Well it perfectly boots even without floppy. Try.

A good Atari is like Gerard Reve ;-)

Do you have a floppy with the programs AHDI and HDX?
With HDX you can make a harddisc bootable.
AHDI is the free standing driver.
SHDRIVER.SYS is what is installed on the bootable disc.

There are of course many other very good drivers.
But getting started again is what counts.

If this is not enough, ask more (and more specific if you can)

Henk.

4913. Re: [Magic6] Limit Memeory Broken?

Newsgroup: comp.sys.atari.st
Date: 1999-03-20 00:00:00 UTC
From: bjr@localink4.com
Message-ID: <921908170.133.69@news.remarQ.com>
Source record: 82350

Okay...here's the beef...
I've a Stock Falcon 030 on VGA with 14meg of RAM.
I'm running in 256color 80column mode.
I have 2 SCSI hard drives under HD Driver 7
NO IDE DRIVE
2 SCSI CDROM drives under ExtenDOS Gold
I have NVDI 5 installed.

Auto Folder like so:
superboot
magicboot
nvdi
drivin
scc
sting
jpegd
imgcinfo (routines for imagecopy)
superbootend

In the Magic StartUp Folder:
MGNotice

I currently have Hard Disk DMA turned off.
No partions are set to use long file names (VFAT?)

At present, I use the desk top that came with MagiC 6.

First thing I tried was this...
I clicked on the application once to highlight it.
I selected Install Application from the drop down menu.
I deselected 'Supports AV START'
I deselected 'Proportional Fonts'
I clicked the Limit Memory Radio Button
I then entered 4000 in the appropriate limit memeory space.

This did not work...

So...I saw there is a program in the ../MAGIC/EXTRAS/BIN folder called
limitmem.ttp...so I ran it...
At this point, the limitmem.ttp gave a syntax help line.
So I ran the limitmem.ttp again, this time as so...
/../PATH/PGS2.PRG
It then said
"current heap memory size unlimited"

I ran it again like so...
/../PATH/PGS2.PRG 4000

It then said 'current heap memeory size 4000kb'

I then ran pagestream...it still took up all memory avilable.
I rebooted, and ran it again..still the same.

Now...I know pagestream as a history of doing this...as I've used it with Geneva for years on end. Even so, a flag had to be set in Geneva to limit the memory for page stream. It worked.

Other things I've tried...
My page stream set up was all set to fast load. I did this myself, went through and set all of the import modules and printer drivers as fast-load. Since installing MagiC, I've tried it both with and without fastload bits set...still no change.

I do not have Thing. The only alternate desk top I have at this point is NeoDesk 4, but so far, I AM NOT using it with MagiC. My plan is based on hopes that one could set flags or run scripts at boot time to tell MagiC what flags go with what applications, (AV-START, Proportional Fonts, Single Task/Preemtive/Cooperative, Limit Memory, etc). Isn't that what limitmem.ttp is for? Since when is it the desk-top's job to set flags for the OS (it's a nice feature...but surely there are ways to set all this at boot within MagiC iteself?)?

I really really wanted to keep using NeoDesk since it has years of coustomization on it. Kinda like yer favorite pair of work shoes I guess...ya break them in and they 'finally' fit. Now I know it may not be a good idea...but once I get things working under Magxdesk, and find SOMEPLACE I can get information about working with MAGIC.INF files, setting flags, etc...I'd like to experiment a bit with NeoDesk under MagiC. It does 'seem' to work Okay the one or two times I booted MagiC with NeoDesk4 as the shell. True..NeoDesk doesn't have a lot of the so called modern functions of Thing or others...but, it DOES have many MORE things the others don't.

But...forget NeoDesk right now.

The question...
Anyone out there a wiz on MagiC setup and configs?
Like is there an attribute in there someplace to set flags such as these?
I see all kinds of stuff in the extras folder that have no readme files, and have NO mention in the manual. What's it all do? How do I use it?

Thanks on the memalloc acc someone mentioned...that's what I need for now. Primitive, but it will work until I can figure out what the problem is.

Thanks,
Brian

If the floppy icons are missing as well and with harddisk turned off
you have a hardware error.

If the computer boots up normally but without harddisk icons you may
have deleted the driver file. If you use the standard Atari driver the
file is called C:\SHDRIVER.SYS . To put it back boot from a (blank)
floppy and run the program AHDI.PRG manually. Next create a drive icon
for C:\ in the desktop and open the C partition. Copy AHDI.PRG to the
harddisk and rename it to C:\SHDRIVER.SYS .

The latest AHDI.PRG (6.061) with utilities can be downloaded from ftp-
sites or I can mail the driver to you.

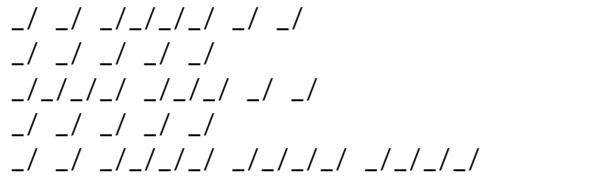
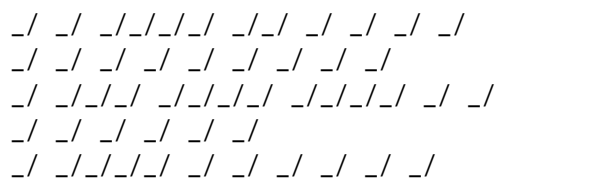
Date: 1999-03-20 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36F3598B.568C@geocities.com>
Source record: 82352

In the message below, Paul write about not getting a NEMESIS board for his Falcon. Now, for this, let me first say how sorry I am to hear that.

But to a 100-240 MHZ Atari clone, let me say...





NOW WE'RE TALKING!! Now that's real ATARI POWER!!

So what's the progress report so far. If this goes through, this might be a Atari worth shooting for!

So questions... Are they working on a 68K emulator for their new PPC machine? Being a motorola based machine like the Macintosh, they will encounter many similar pitfalls. Would a Atari PPC at 100 MHZ emulating a 68K Atari be much better than a 68030 Atari TT? I doubt it.
Of course, I'm sure in time, the programs would be PPC native and this wouldn't be an issue. I would, of course, get an Atari PPC that would run the old games and applications at normal speed, and of course I could enjoy the blinding speed of the PPC with (like a modified version of CAB for good internet browsing, printing, etc)

I'm sure at those speeds, emulation of other platforms will come a lot easier.

This is truly exciting! If these PPC is becoming a reality for the Atari platform, what challenges await us Atari users? And what will be possible with this new processor?

Curiously,

Doctor Clu

Hello Bengy,

this is the first time I add a message to a newsgroup but I can't
avoid to agree with Hallvard... ;-)

My company was the first publisher of a local magazine in Germany
based on CD and also available monthly in the Internet. Despite of
enthusiastic reactions on behalf of the audience we had to cancel
our efforts because of the lack of creative potential in the local
advertising business. Since May 1997 we host a neverchanging
"best of" of our magazine under www.skult.de and still get about
10.000 users (users, not hits!) a month to the site. So, if you can't
manage to maintain your site the way you did (which I really can
understand!) just leave it the way it is and make an update whenever
you feel able to make one.
If you don't get involved with increasing costs for the hosting (I'm not
informed that detailed about the online situation in other countries than
Germany), just let your pages rest where and how they are and people
will hopefully be quite happy...

Anyway, best luck with your graduation!!!

4920. MagicPC and directx

Newsgroup: comp.sys.atari.st
Date: 1999-03-20 00:00:00 UTC
From: 320034485918-0001@t-online.de
Message-ID: <7d06g7$72k$1@news05.btx.dtag.de>
Source record: 82357

Hello everyone,

I guess I have a problem caused by directx (unfortunately I don't know
exactly).
I use MagicPC 1.1 on a PII300 with 3D Blaster PCI and 3D Blaster Voodoo2.
After I installed directx 6.1 I get an error when starting MagicPC:
"IllPC-Exception".
Does anybody have similar experiences (and - appreciated - a solution to all
this)?

If any further informations may be necessary - I'm wï¿½lling to tell of my
private
circumstances whatever you impose to be necessary... with some, I hope,
understandable limits... ;-))))

I will reluctantly warn you to be very careful in dealing with Maurice (Moe) Daniels. He burned me to the extent of $37 and change by not accepting a C.O.D. package, or at least making arrangements for it to be delivered to a neighbor. I was sending him a computer that he had "bought" from me, and have documentation that will prove this happened, if anyone doubts me. I thought I was safe in using C.O.D. for "cash only."

4922. FLEXTRAX v0.5 released!

Newsgroup: comp.sys.atari.st
Date: 1999-03-20 00:00:00 UTC
From: Daniel Hedberg <d.hedberg@swipnet.se>
Message-ID: <XCOI2.2512$zY1.5239@nntpserver.swip.net>
Source record: 82359

The first beta release of the new soundtracker for Atari Falcon030
compatible computers is now released!
Besides support for the MOD file format (up to eight channels), FlexTrax has
its own file format. An extended version of the standard MOD file format
with support for effects like reverb and delay. The replay routine used in
FlexTrax was first developed for the platform game "Willie's Adventures".
Both VGA and RGB monitors are supported.

Get it from http://newbeat.atari.org

All the best,
Daniel Hedberg

Date: 1999-03-20 00:00:00 UTC
From: Daniel Hedberg <d.hedberg@swipnet.se>
Message-ID: <hEOI2.2514$zY1.5756@nntpserver.swip.net>
Source record: 82360

A patch for MagiC (the multitasking operating system from Application Systems Heidelberg).
The patch forces MagiC to skip the check for IDE drives on Atari Falcon030 compatible computers and Atari ST computers equipped with the H&N Multiboard. This new version of the patch is compatible with MagiC 6 as well as all earlier versions of MagiC.

Get it from http://newbeat.atari.org

All the best,
Daniel Hedberg

From: phantomm@eastky.net
Message-ID: <7d0hsu$k111@news.ajou.ac.kr>
Source record: 82367

Greetings Atari Folks,

Looking at the possibility of installing my Falcon into a
different case other than the stock one.

Have heard of different types of cases produced just for this
purpose. Would like to know if any of these cases can still
be purchased new?

If not, what other options do I have to re-case my Falcon?

The main reason I want to re-case the Falcon is more room
for aftermarket cards and IDE hard drives.
I would like to use the Falcons KeyBoard if possible. And still
want easy access to all the ports.

Any help and suggestions are much appreciated.

I'm no programmer, but I have read that 68K code must be run throught sort of
a cross compiler to run on the Cold Fire CPU's (this info at the Mot site).
What does this mean for the "Tempest", a code interceptor? I wouldn't even
want to get into the PPC part.....:)

Check with Systems For Tomorrow. Kent said he should have some Centurbos by
the end of the month. If your going to go to the trouble to hack your machine
to install a Nemesis, might as well go with the Centurbo. I would stay away
from dealers selling the REV A boards, and wait for the latest version from
Centenk.

4932. Telstar by Peter Rottengator (sp?)

Newsgroup: comp.sys.atari.st
Date: 1999-03-20 00:00:00 UTC
From: jfhaslam@zetnet.co.uk
Message-ID: <7d0pqgvru1@roch.zetnet.co.uk>
Source record: 82369

Hi all!

Can anyone tell me if Telstar is still supported? Its written by Peter Rottengator (sorry if I've spelt that wrong! :))

I've tried most of the (STiK/StiNG support) Telnet clients, but this is by far the most usable. I'm mainly using it to play MUDs (Multi User Dungeons), but it could do with some extra features, such as an address book, and scrollbars.

Cheers!

James

Hallo Herbert,

first: those Atari Harddisks have somewhere a switch to give them an
ID-number.
By default they are set to id=0.
Then they are potentially bootable.
But do not connect 2 the same time as they can have both the same
number.

You erased files.
Can you remeber if there was something gone with an ending of .sys?

No as long as they spin and make a rrt rtt rtt noise when starting
(heads are moving and testing) mostly they are OK.

seems you ned the Atari floppy disk with Harddisk utilities.

Can send you a copy? Wanted?

No do not thinks so. My first action was: all acc and not needed
stuff deactivate.
I activated myself and took a big heavy b/w SM194 from the cellar to
the attic to have b/w again on that TT.
But Thing keeps giving bus-errors with things like: save desktop.

Bernd says: that Thing coming from the disks of N.aes gives problems.
So I will try the shareware version on the Mint98 disk.

And get a real one in Neuss? WITH SUPPORT?

Hooi Henk,

Yes those Atari harddisks have internally an RLL (or was it MFF?)
drive.
Only when formating there needs to be information available about the
hardware of the drive. Like number of heads, tracks, sector size and
all other difficult stuff.
In a file there are descriptions of the SH 204 and 205 drive, the 20
Mb megafile , the 30 Mb megafile etc.

It is all on the Atari HD Utilities Disk.

I'd recommend you look at a big old PC case, I used a Tandon desktop and the motherboard went in with minimal mods to the drive bays....I cut a hole in the side and ran the floppy in it's old position....You'll need to either make a keyboard case out of your old case or get a FreeKeys, I did the latter. I can sell you converters for Falcon to normal IDE......

>The main reason I want to re-case the Falcon is more room
>for aftermarket cards and IDE hard drives.
>I would like to use the Falcons KeyBoard if possible. And still
>want easy access to all the ports.
>

Same here, I've got room for Eclipse and Tempest......latest from Titan is that Tempest will be 200MHz PPC, and Eclipse will be 4Mb ......plus Tempest will suppoprt 256Mb of TT RAM.....ho-pefully the buil;l for the two vboards plus all the RAM will be about 600 UKP, which will give me a kick-ares Atari system, I'll probably get a Linux68K installation too.....my baby's gonna fly....

Pluis...it is important that you paint the case in an interesting way, leaving it a dull grey cxolour makes your system run slower.....mines metallic purple with metallic green tigerstripes and luminous yellow Atari logos.....

Hi there,
I've read about a LIGHTHOUSE TT TOWER (around '90 - '92)
So that's what I want or can I better buy a standard PC tower and pick up
my drill and saw ?? Hey guys, I want a TT with everything built in it :
drives, CDROM, CDWRITER, modem, YES, I want a TT look like
a modern PC !! Just look like, cause I'm not a nostalgic freak , who drives
an old Citroen....These are modern times and I think with all the new
features of the last years like CAB, MagiC, Jinnee, NVDI etc etc , we
have a modern computer , it's called Atari TT !!!!
So I want my modern Atari in a modern house. I know towers existed even
before the Mega STE and TT -cases, but it's obvious that the tower remains
the ultimate house for computers.....

4945. Falcon stereo problem, advice needed - offering reward for working solution!

Newsgroup: comp.sys.atari.st
Date: 1999-03-20 00:00:00 UTC
From: Satcom2 <svenhard@primenet.com>
Message-ID: <36F450AD.2641@primenet.com>
Source record: 82382

My Atari Falcon recently lost one channel of sound from the headphone jack. I tried tracing (by touching 2 bare wires running to a set of headphones) back behind the first capacitor on the motherboard, and still nothing. If you go back behind the next capacitor, even on the working side, you can't hear anything, so headphones won't help me find the problem if it is behind the first capacitor. I am not very handy with electronics.

One person on usenet told me that my digital to analog converter was fried, but in my internal speaker both channels of sound are represented, so I am thinking that I just have some kind of fried capacitor or something along the line of the side that is out. I did have a faulty speaker system hooked up before this happened that could have messed something up by sending in a power spike.

For now I have rigged up my internal speaker so that it is hooked up via a small wire to the side of the headphones that went out, so that as long as a program or game uses the internal speaker, I get "sort of" stereo sound. One side is normal, and the other side is actually a combination of both channels of sound from the internal speaker, and when something I run does not use the internal speaker I am still stuck with one channel of sound.

Does anyone have ANY advice for me? If someone could tell me how to fix it with simple electronic parts, and it works for me, I could send you a nice gift, like, say, Crown of Creation 3-D for the Falcon like new in a box! Does anyone know if maybe I should buy an Atari Falcon field service manual?

I really am proud of my Falcon's stereo sound and want to be able to show it off again. For god's sake, show some mercy* and help me. Thanks.

Hey honey can you printout a page from the web for me? need to do a
research.
Sure..

hmm, why doesn't it work directly?
-oh I need to start wdialog, "they" got the good idea that if the user
wanted to print something, wdialog was absolutely needed.
-but it worked before? didn't it? yes, that's a feature.
-so why don't you run wdialog by default everytime?
-coz it messes up my system, so I don't run it, unless I really need to.
- oh ok.
....

-hmm taking for ever to print those 3 pages out. Why? this printer should
be quite fast, we have the same at work, and doesn't take this long.
-oh probaby because I need to load the "demo" accelerator driver for the
printer.
-why just a demo for the driver? I thought we just spent 150bucks for the
latest version of nvdi?
- I don't know, I guess they want to give the impression that atari when
printing takes forever.
-Sounds weird..

"I know, many of you might not like that kind of posting, but so true that
I can not let this one go."

Here, I beg to differ.

Following the announcement of iCAB's release, I posted on the STiK beta-tester's private mailing list to ask Alex what we could expect on future GEM version. Unfortunately, his reply was rather evasive and went along the lines of "Sorry, been _very_ busy with the iCAB thing. I've noted recent ideas from everyone on this list, but all I can do on the GEM version are bugfixes, right now, cause my time is limited. I'll get back to the GEM version eventually."

>CAB is stable, the various OVLs are a completely different matter...

Agree,- CAB is very stable on my system. I can make it bomb,- but only under a specific conditions.

>Hehe... While CAB is a very good program, it's not exactly "optimized"
>in Atari-terms...

IIRC,- they where talking about the code for the MAC version beeing optimized. It is translated from Pascal into something else with CodeWarrior. Can`t remember what.

I do like to se a faster image loading in CAB, it`s terrible slow.

My reason for mention iCAB at all, is that I wanted to se if it has some features I like to see in a future Atari browser. And there was a few.

Like beeing abel to highlight some text on a web page, and save only that part as pure ascii. Or the error repport that give a list of any errors there might be in the page, a very usefull option if you make you own html code.

cheers

Joergen

Source record: 82202

I'm trying to resurrect my ST so that I can transfer songs from it to my Mac. Both the hard drive and the cpu have gotten all screwy. I do have a backup on a 44 meg Syquest, but can't get to it because of my troubles. I'm reluctant to buy a new machine but will if I can find one cheap enough.

I can't find anybody in the DC area who works on the Atari, even Toad doesn't support them anymore.

Here is what I am looking for;

either local help or ideas where to look for it, an inexpensive machine that I can beg, buy borrow or steal from somebody, or a way to read the backup on my Mac. If I could just turn the ST files (which were recorded with Dr T's KCS) into midi files I would be all set.

I know I posted last week, but my ISP's newsreader sucks, so if anybody did try to contact me I didn't get it. Please use e-mail.

4956. Lynx Browser for the Atari ST?

Newsgroup: comp.sys.atari.st
Date: 1999-03-21 00:00:00 UTC
From: ad329@james.hwcn.org
Message-ID: <7d4dnp$nd4@james.hwcn.org>
Source record: 82203

Has anyone written a text only browser like Lynx for the Atari ST? It seems to me like this might be a practical solution for people with un-upgraded 520STs with no hard drives who just want to surf the web. Should be pretty simple to set up too.

I have a shell account on a unix system that's running Lynx and I've been quite happy surfing the web with text only (with my 14.4K modem I'm probably able to access the info as fast as people graphically accessing at 56K if not faster). If I need an online graphic, sound, or animation file I just download it and view it offline. But since my main need from the internet is the text info, text only browsing works great for me.

A Lynx-like browser would be great for people who do not have access to a shell account and only have a low power ST and do not wish to buy a PC or upgrade their ST and who primarily use the internet to get text information.

Of course it would need to be coupled with some sort of very simple e-mail/news reader too.

Anything like this exist or is planned to exist?

I was just reading about how somebody here had custom painted their Falcon and I thought, "Cool! I'm not alone."

I've custom painted two of my Atari STs. One (my very first 1040ST) I painted bright red and then spounge painted it black so it looks like it's made out of some bizzare black and red marble. The other I painted bright blue and shook a paintbrush soaked in bright red paint at it to make neat looking splatters all over it.

Who else here has given their Atari computer a look of it's own?

I'll be doing something very special with my Mega ST when I come up with a really cool idea. This one I really want to put a lot of thought into.

That's a funny story...

The term "computer bug" is derived from the fact that moths used to
crash the tube-based computers of the 1940s. The moths were big enough
to make contact with two tubes, causing them to blow (including the
moth, I'm sure).

CleanSweep'45: a fly swatter and extra tubes :-)

Well this is true. Arguments I dont mind, after all it is a discussion
group, but the "discussions" about who is and who is not an "Atarian" kind
of bugs me. Ah well

Whoa, thanks for this really nice thing to say. I'm not really "moving" on,
im just getting my priority's (sp?) straight. This summer when I graduate
(yay! :) Ill totally reopen my page as I will have way lots of time for it.
And don't get me wrong, I love working on my page, it's like one of my
favorite things to do! But unfortantly it is too tempting to update my page,
add a new section etc when I am suppose to be studying for a test! :)
>

No no no, thank you (and everyone else). See how I said being an atari user
really is like being part of this warm family, and all of you guys with your
motivating words really proved this.

Hello everyone,
Well man, what can I say..
The next morning after I posted that message there were ***33*** messages
waiting in my mail box! Everyone was so supportive, they didnt
tell me to keep it open, instead they said that graduation is important
and to just do what I feel is best for me.
All I really can say is, Atari users are the absolute best :)
Ive thought about it, and Im going to leave my page online, but in a
"relaxed" state, being updated when I really have time.
I just cant believe it, ive had offers to host the page, people
asking to take it over, even one guy wanted to translate it into German
for me.
I just want to Thank ALL of you SOOOO much, and I wish that I wasnt so far
away from the rest of the Atari Users, if we werent maybe we could have
went out for coffee :))

>> >>platform where his roots are.....Atari
>> >
>> > I am with you on this one.
>
>Perhaps the reason why iCAB now exists is because an abundance of people
>like Mr.Egocentric and unfair above unfortunately exist within the Atari
>community,
The reason iCAB exists is because a lot of Misters Egocentric have
supported the commercial version from CAB 2.0 up until the latest one.
While Mr Unfair was paying good money for the latest update, Mr Claus
was slaving away at the iCAB version, leaving all the Misters unfair
thinking he was hard at work getting the Atari version right....

Let me explain this in plain English: Mr Claus for my part may write a
CAB version for every existing platform, but he has an obligation to his
"customers", CAB is better then the rest, but it is not finished, the
Atari community has been waiting for over a year, expecting a better CAB,
I'm not saying a CAB with more features, no just a CAB where we can work
with. Maybe you find it normal when bying a commercial product, you have
to look for a OVL in the PD/Sharewaremarket just to be able to make it
do the things it's supposed to, well I for one don't find this normal. I
would say the contrary....
Instead of improving the program, he just sits back and take the money
for the various updates, which are NOT improvements, then after a whole
year of silence iCAB is announced..... well, this makes me mad !!
Go to http://www.imac.de and read for yourself.....development on iCAB
started in february 1998, a month before CAB 2.7 hit the shops.

I'm sitting here with a crummy CAB, and you expect me to be happy about
this situation? Every time I enter a strange url I wonder what is going
to happen.... will CAB start loading it without any problems or will it
just bomb out on me....Maybe you think this is the normal way, well I do
not.

>and that Mac users are probably much more likely to support
>Mr.Clauss' hard work than we Atarians are...

Did You say hard work? Well, if you ask me the hard work has been done by us...every CAB user has been a betatester for two years without knowing it. He doesn't even mention the origins of CAB on his iCAb site, could it be that he forgot all about us, after all we are financing this.... When I say "we" I mean the egocentric and unfair atari users, not the noble and fair ones.....Speaking of fair: have you asked Mr.Claus about a crossgrade to iCAB yet?
>
>I also disagree whole heartedly. Wishing failure upon someone who has
>done so much for the Atari world is just plain idiocy.
Fine, disagree as much as You like, these are my views on the topic and I have no intention to take them back...
To end this, let's clear up one thing first, I never wished anything unpleasant to Mr.Claus. I did say that I hope that iCAB becomes a very BIG GIGANTIC FLOP, but since Adamas is making a lot of progres I dont even want Mr.Claus to return to the Atari platform. If he does I for one will think twice before investing money in his "efforts"
Mr.Claus showed he has no respect for me (the user), why should I have respect for him (the programmer)?

Besides, this goes much further then plain idiocy, this is a struggle for life: iCAB could well be the final nail in the coffin:
Just look at the credits....A.Claus, the brothers Behne, Thomas Much... are all working on iCAB, and heaven knows who else they've got working on this project. If iCAB should become a succes these people will be full time working on that program, where does that leave me (us)??

>Its a sad indictment on the Atari community but one thats true AFAIC...
These are my PERSONAL views, I'm not speaking for the rest of us....
Two people objected, one agreed in this newsgroup, this is hardly the Atari community. I received six emails concerning this topic,three people told me I was absolutely right, and three absolutely disagreed with my opinion. I expected much worser.....could it be that more people share my views but just keep it to themselves?

The Atari Community has long enough been quit, it's time we stand up and make some noise. The last fifteen years have been one long continueing story of people making a fast buck on the back of the Atari community, we're the BIG example how things should NOT be handled, and still we sit here and take it.... we've seen it all from vapourware to unusable products, from non existing support up to being swindled, well, I'm fed up.... I'm willing to invest time and money into the efforts of everyone trying to do good to the Atari Community, when I notice this goodwill comes from one side it hurts.... deep. And from now on I'm going to react to this.... iCAB, PAPYRUS, MiNT 98 and others if need be.... the next one on the list may well be Titan Design.-)
Every time I "nail" one of these against the wall, there's bound to be reaction, in less then one month time I "nailed" R.O.M twice, where were You and all the other fair and noble Atari users? not one person in this newsgroup objected. This is a strange attitude, agreeing to one nailing but objecting to the other......

The real Atari community is not here, we're only a small part, most of the CAB users don't even know about iCAB, but I'm sure that they all will be pleased and feel very happy knowing that the programmer decided to bugger off.....

Cheers from Belgium

Dennis

PS: Now that I've got this of my chest I'm going to bed, dreaming of the imaginary browser and clients, Jo Even described so nicely a couple of days ago.
Ah sweet dreams -((

I'm really glad to hear that, Bengy - I certainly don't know what
we'd do without someone with your zeal. As long as you pace yourself,
things should be okay.

strangely enough, even with my troubles I had a very nice day today
going out for a walk and everything - and wound up getting more things
done than I had in my troubled state.

Now go out there and graduate - but don't forget to check in from
time to time :)

4967. iCab interview, makes me mad!

Newsgroup: comp.sys.atari.st
Date: 1999-03-21 00:00:00 UTC
From: Bengy Collins <collins@bulli.com>
Message-ID: <j70J2.216$m3.46@news0.telusplanet.net>
Source record: 82253

Hey,
Well while I was reading some iCab interviews, I came across this. The interviewer asked iCab co. what their email client of choice was, and "Oliver" responded:

> We are using different email
> systems. I prefer Eudora Pro. Alexander is using Claris Emailer 1.1.3. I
> started with Emailer 1.1.3, but wasnï¿½t really satisfied with 2.0. For the
~~~~~~
> MagiC Mac/PC platform ASH has an e-mail program, but it isnï¿½t translated
> for the plain Mac platform. Maybe the author will switch in the future.
~~~~~~

So basically, I see two things from this small sentence. 1) It sounds like these guys are hoping, maybe encouraging the author of ASH emailer (dont know his name off top of head) to switch to the Mac Platform, which would be terriable, and now we all know the He isnt satisfied with with Emailer.. well, both of these things kinda get me mad..

Im sure this doesnt get anyone else mad, Ive been told im too sentimental :)

More often then not, double postings seem to be associated with MS products.
Why is this? I feel sorry for all those atari users who are posting from work and have to read their posts twice and feel foolish:-). Although it has happened to me once with NEWsie I felt embarrassed when I saw my post twice. So Why does this occur?

4973. Re: What's happening to this newsgroup?

Newsgroup: comp.sys.atari.st
Date: 1999-03-21 00:00:00 UTC
From: madmax@bfree.on.ca
Message-ID: <v61J2.23$ih3.247@198.235.216.4>
Source record: 82259

I will tell you what is happening. Go back and read all the messages again
in many of the controversial threads and then just start LAUGHING.

First of all, BELGIANS and DUTCH should NEVER get along.

Second. Many posts are misread because of English not being the posters
first language.

Third. People have different opinions on everything.

Fourth. Read when People want help, be it MAGIC/MINT/GENEVA/TOS/CAB/HADES/
MAGICMAC/PACIFIST/SLM/NVDI/STING/CDROM/HDRIVER......The list goes on
even to the point where some really wierd guy is wanting a CDROM created
to work on his MAC and ST, they all get help.

I don't think anything bad is happening unless people are taking things
personally.

Now what is REALLY HAPPENING IN THIS NG IS.

1) I bought A MEGA 2 with SC1224 for $20 CDN. About $12 US. :-).
2) I bought a TT 030 with 6 MEG Ram 430 MEG HD/ CD ROM and 28800 modem
for $250CDN (About $160 US).
3) I am looking for a Megafile HD.
4) Looking for Ethernet/Graphics card for TT:-).

5) My Falcon uses (It decides for itself:-), Geneva/NeoDesk.
Magic 4. won't work.
6) My TT will soon learn the trials and tribulations of MINT/MINTNET as
soon as I finally see the outcome of the Mintthread currently active.
7) My 520ST Uses NVDI/MAGIC and is still used by me for the internet
50% of the time.
8) Both my ST and Falcon have equalled my Nephews P150Mhz on the internet
in terms of speed/ even with the ST bottled at 19200.
(I don't explain why, I only observe). Although we weren't testing via
the same provider.
9) As for OS dominance and opinions.
I spend a STUPID amount of time using my ST in TOS 1.0.
Often I am looking for answers to problems that occur. Many times I am
told to forget TOS 1.0 (Good IDea), however the problem may not be
a TOS problem but an App problem. Regardless the answer usually comes
to the forefront after posting to this NG.
10)TOS/MAGIC/MINT/LINUX/OS9/MINIX/GENEVA/HADES/MILAN/FALCON/TT/ST is all
comp.sys.atari.st to me.
11) # 10 alone would NOT be enough to make me an Atari User today.
12) I returned to using Ataris for reason #13)

13) All the USERS who seem all to EAGER to help. I can't find this same support on any other platform, let alone the knowledge that is possessed here. People here know more than JUST ATARI yet can apply their knowledge to this NG and then I learn so much more.

14) I couldn't stop at 13, it is an unlucky # ;-).

Brian.

>just bomb out on me....Maybe you think this is the normal way, well I do
>not.

That's a long time ago I did not succeed anymore to make CAB bombing !
I have just a regret right now: we can't visit Java made web sites ...
and it slowly becomes like a standard for some very simple commands
... so it urges that someone write some Java module for Cab ...

>>and that Mac users are probably much more likely to support
>>Mr.Clauss' hard work than we Atarians are...
>Did You say hard work? Well, if you ask me the hard work has been done by
>us...every CAB user has been a betatester for two years without knowing
>it. He doesn't even mention the origins of CAB on his iCAb site,

I have read in two computer magazines articles about the iCAB birth
... they are talking about the atari version, one magazine says: the
size of the program is incredible and it comes from very optimized
files created on the Atari ... bravo !
The other magazine is laughing on the floor when talking about this
atari program origins ...
So Macintosh magazines are now talking about Atari computers ... why
should we avoid to speak about macintosh computers here ?
These magazines are SVM Macintosh March issue and Mac Univers World
... and that's not all ... I have seen an announcement about iCAB in a
televison magazine called Telemoustique ... they are also speaking
about atari origins with respect !

>If he does I for one
>will think twice before investing money in his "efforts"
>Mr.Claus showed he has no respect for me (the user), why should I have
>respect for him (the programmer)?

I think you don't really know what's the meaning of respect here ...
all you are talking about are pure suppositions ... and don't give
Alexander any intentions if you don't know more about ...

>Besides, this goes much further then plain idiocy, this is a struggle for
>life: iCAB could well be the final nail in the coffin:
>Just look at the credits....A.Claus, the brothers Behne, Thomas Much...

I don't think there is any "100% safe" way to complete a sale/swap remotely. The process always requires that both parties are willing to fulfill their promises. Most of the time, in my experience, that has been the case. Regardless of how you arrange the transaction, one of the parties has to trust that the other guy/gal is willing to do what he/she promises to do.

I prefer that customers prepay for the package in full. This requires that they trust me to actually send the package. When someone wants me to send the package COD, I request that he/she prepay the COD charge and shipping both ways. If the shipment is refused, I'm only out my time and effort to send the package.

Yeah, I knew about Teli, but I really don't want to switch to
I-Connect, StiNG is far better, and it supports networking, which may
be something I will get into more in the future.

Cheers!

> some error message, and then return me back to the main menu.

Errmm... you have tried reading the docs? You're probably trying to run
auto folder stuff from the desktop. Read on for more info.

> So far my understanding of browsing on the ST goes something like
> this... Cab is the browser, and you need AT LEAST 1.5. The connection
> and PPP/TCP stack to run Cab, at least the one I've heard most suggested
> is STinG, which is a offshoot of STiK.

Yup.

> I've seen in the Cab program where other telnet, newsgroups, Ftp, and
> others would be added.

This is only for when using them with CAB for those types of URL: you can
of course use the clients individually. NB all this works much better under
a multitasking OS (though you can get by without), RAM permitting. Should
be OK with 4 megs on an ST.

> Nice. But I guess I just need to get the
> connection utility set up.
>
> Any advice at this point?

Yep. The docs are a little confusing to anyone coming to this cold, partly
because STinG does much more than dial-up connections. I have a
step-by-step guide on my web site, though it's offered on the basis that I
am not an expert and I make no guarantees it'll work for you. However a
couple of people have found it useful if only as a pointer, so you might
care to investigate it:

http://www.whalley.demon.co.uk/atari/texts/stingset.html

> Also, since I plan to be running this program for mainly text (since
> I'm working with a 8 mhtz machine running with probably a 19200K buad

> port at best), what features should I turn off to make it more
> efficient, and how do I turn off the auto load on the graphics.

If you're using a mono monitor, you'd probably best turn off background pictures and letting it use the page's colour settings. That way the text should be readable. These settings and the autoload of images etc are all in the display settings dialog.

>recognize it. Any suggestions?
>
I do not know if that is a peculiarity of that editor, but it is
alway difficult to enter control-codes in a tekst file.
How many make from a tab (also a control-code n.l. control-i)
a number if spaces?
Control-H is backspace. What does an editor with a backspace mostly?
using as a 'delete-last-character'.
And give me an editor that reacts to control-d or EOT (end of
transmissing) by indeed stopping the transmission?
(transmission of what uberhaupt?)

So the control-x or CAN (cancel) will give a lot of trouble getting
it in a tekstfile.

I use QED and load the file (after typing in as normal text) as
'binairy'.
Then I put in the byte-value.
It always works.
But beware: once loaded in an editor those control-x etc. can
be stripped again!!!

>>just bomb out on me....Maybe you think this is the normal way, well I do
>>not.
>
>That's a long time ago I did not succeed anymore to make CAB bombing !
This is the current situation:

I've got Sockets (IConnect) and Sting both installed, strange but true,
they
like each other, no conflicts here.....
I use Sockets (Iconnect) for email, ftp and newsgroups, why, becouse
Iconnect
simply is a lot faster opposed to Sting. When I want to go to a certain url
I
have the choice.... with Iconnect and the crummy OVL file from Mr.Claus or
with STING and one of the two excellent OVL files given to us by two
members
of this community, these people deserve much more credit then they are
getting
right now....it's time we put them in the spotlight, without them surfing
really would be a disaster.
Back to the topic: CAB comes with CAB.OVL, using this piece of shit, CAB
bombs
regularly....
So what have we got here? a commercial program which needs a whole lot of
help
from PD/Shareware/freeware authors so one can do the things with it that is
expected from it..... have we all gone mad? why are we accepting this? and
why
is someone a "idiot" if he publicly says this?
Why do I still use CAB sometimes with the original CAB.OVL? because of
speed,
that's the only reason.... IConnect is a whole lot faster connecting and
also
holding connections, so I use the original CAB.OVL to visit the few
websites
it can handle, and use the PD/OVL for the rest....(most of them)
Last week I decided to join the MagiC mailinglist, well you can only join
this
list using STING & PD/OVL combination, registering with the original
CAB.OVL

is just not possible....bombs......

>I have read in two computer magazines articles about the iCAB birth
>... they are talking about the atari version, one magazine says: the
>size of the program is incredible and it comes from very optimized
>files created on the Atari ... bravo !
Now I'm ROTFL.. incredible optimized code.....ROTFL again, and again....

>The other magazine is laughing on the floor when talking about this
>atari program origins ...
Oh boy, the famous French magazines, did they mention that iCAB is not
available in French? I don't think the French Mac community will like
working with a German or English iCAB..

>>Besides, this goes much further then plain idiocy, this is a struggle for
>>life: iCAB could well be the final nail in the coffin:
>>Just look at the credits....A.Claus, the brothers Behne, Thomas Much...
>>are all working on iCAB,
>
>All were and are working on mac since a while ... did you really
>expect some other "no way" ... ?
Go ahead, push the nail a bit deeper!!
According to you: every programmer who is on a Mac or PC using a Atari
emulator is going to drop our beloved platform?
Are You gonna organise the funeral? As much as I hate to write this, Martin
and Katherine are right...They both are bigger prohets/gaudies then I am.

>>The Atari Community has long enough been quit, it's time we stand up and
>>make some noise.
>
>You are already making a lot I think :)
>Of course we must be aware, as stand alone users, that we are in a
>very very very unstable position (even while not speaking about the
>illusory "market".
Believe me Jo, I've only just started.... I'm gonna make a lot more noise.
As a stand alone user I can still make my point and get it across
I can "bombard" certain authors with emails. Just suppose every MagiC user
would start mailing ASH once a day, demanding a English Jinnee...They would

receive a couple of thousand mails each single day, always asking the same
thing.....support.-))
Most of the sofwarehouses and programmers do not react on postings in this
newsgroup, but that doesn't mean they don't follow them. At least now they
know how some of their "customers" feel.....
BTW: both my feet are planted firmly on the ground, I'm not in a unstable
position.-)

>I have just a regret right now: we can't visit Java made web sites ...
>and it slowly becomes like a standard for some very simple commands
>... so it urges that someone write some Java module for Cab ...
Did you say "we"? I CAN'T access Java made web sites for the moment, with a
little luck Adamas Pro will change this next month. YOU have a Mac next to

your TT, you can access all the sites you like with the free NC or IE, and when iCAB arrives ALL your problems will be solved.....maybe...-)))

>That's the point Dennis, but be aware that this invisible community
>doesn't use high end machine like we use ... they are all in front of
>their 1040 ... euch ... perhaps 520ST ...
The beauty is that one does NOT need a high end machine to go on the net. A 520ST can manage this perfectly given memory limitations... the problem is
that the "invisible community" probably is not aware about programs like Sting
and the alternative OVL files. When they buy CAB "the complete WWW solution"
they will soon give up, thinking that the hardware can't handle it....
If they desperately want to go on the net, they probably sell the ST and join
the Micro$oft troops, all this because Mr.Claus is not bothered putting the piece of shit he programmed, right... If he adopt the same attitude on the Mac platform he's in for a very nasty suprise......

Cheers from Belgium

Dennis

PS1: Jo, going into a discussion with a "prohet/gaudy" is futile, look in the
dictionary..... a "prohet/gaudy" is a very wise man, spreading the thruth and
nothing but the truth. His word is the gospel, the prohet/gaudy leads the way
and his words and opinions are NEVER but in doubt, that's why he is a prohet
after all : he's the guiding light..... amen-))

PS2: If a eight years old battered and bruised TT is a high end machine, what
do you call a Milan or Hades? -)

Jos, I recall the Lighthouse was quite expensive.
Any tower bigger than a mini will do (bloody Atari motherboard sizes!).

At my work last week 19 pieces of HP Vectra's arrived: desktop casing, but
they got quite some room inside (roughly a miditower model lying on
its side). The only towermodel was for the CD-ROM server (7 pieces 32
speed inside, wait till they're all whining with irregular disks, maybe
the tower starts walking!). It struck me the desktoppers are real QUIET...
OTOH, today I discovered one P-75 in one of the offices really rambling
along; on inspection the PSU fan turned out to have gathered too much dust
and probably will bite the dust real soon. Well, that was a "made-in-China
model" :-) hope it survives my two days off.

Well, in the end the Lighthouse gave not more room than a nowadays
big tower. And with all the screws, special mouting plate etc. it was
a terrible job to fix something inside, really.

As I already told in another message: it was RSVF.prg in Auto-folder.

But how can a small program of no more then 380 bytes make so much
seemingly unrelated trouble (bus-errors of all things!) much later
on?

Atari formatted is different from windhoos formatted in case of
harddisks. Not much.
So:
HDDRiver (commercial) can make 1 partition of the disk that is both
TOS/DOS compatible.
And more: al special trics & functions for ZIP are in HDDriver!

I have here in my toolbox a 8 kb big program called DISKMOD in a
folder called IBM_BOOT.
According to the readme: 'will write new sector 0 so it can be read
by any MS-DOS compatible machine. It wont effect any data on your
disk.'
Maker is unknown to me.

Need something like this?

5000. Atari Network Connectivity pages are back !

Newsgroup: comp.sys.atari.st
Date: 1999-03-21 00:00:00 UTC
From: Karl Samyn <saka@village.uunet.be>
Message-ID: <36F55043.CF9AF83B@village.uunet.be>
Source record: 82286
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

hello folks,

Saka is back after a dark connection-less period of 4 months.

This means the "Atari Network Connectivity" pages are also back.
The URL of these pages changed :
http://gallery.uunet.be/saka/atari.htm
So pleace adapt the links on your pages. THX :-)
Well there is a lot going on at the atari-ethernet scene. Maybe we'll
get an ethernet adaptor after all for our beloved Atari computers. More
info on the pages.

Maybe there will be some minor html errors, sorry for that... If you
would see some, would you be so kind to let me know where it's going
wrong?

I also would like to thank Martin "Nightowl" Byttebier for keeping the
Belgian FTP-site up to date while I was gone.
The Belgian FTP site is still available (no plans to give it up in the
near or far future) at ftp://193.190.205.13/atari/
If all goes well, the DNS name should change soon to somethins that's
easy to remember. I'll keep you posted about this.

Friendly greetings,

Saka -- Karl Samyn

Do you have hsminst.xdd (or similar) in your MiNT/MultiTOS-folder? If you do then just delete it. It needs RSVX.prg to work, as it expects to find a RSVF-cookie.

MY 'office' is nearly always a mess - but's it my office and not part
of the house, so the wife tolerates it. IKWYM about the cables, I
have so many damn cables everywhere, it gets frustrating sometimes
when you can't quite remember which cable goes where!

>But ARE YOU INTERESTED ???????????

In buying or swapping? No, not really, I think I have everything I
require for my simple needs. I have most items on your list. One
thing I must do, reminded me when reading your list, is install
Timeworks on the new 'old' Mega system because I occasionally need
access to old documents and I don't have TW on the Falcon.

Kind regards

I also disagree wholeheartedly. Wishing failure upon someone who has done
so much for the Atari world is just plain idiocy.

Perhaps the reason why iCAB now exists is because an abundance of people
like Mr.Egocentric and unfair above unfortunately exist within the Atari
community, and that Mac users are probably much more likely to support
Mr.Clauss' hard work than we Atarians are...

Its a sad indictment on the Atari community but one thats true AFAIC...

I have my TT in a big PC tower.
Basicly you have to remove or warp all its PC guts.
A tip:
I screwed the main board on a 8 mm thick MDF piece.
That strengthens the board and if you give it the right dimensions
it will strengthen the emptied case as well.

Success.
Henk

>be purchased new?

Wizztonrics still offers Rack Mount cases...
These are not cheap, but they do come in various configs, so that all you've got to do is drop your Falcon inside, plug in a few cables, and go. In this case, you'd likely opt to get the internal version of DeKa preinstalled in the chassis (DeKa allows you to plug in PC keyboards which can be had from $15 to $hundreds depending on how fancy).

If you plan to put in lots of drives...this is a good case, as it has plenty of room for an optional PowerSupply...you don't want too many devices sucking on that tiny Falcon PS.

Once again, Wiz racks aren't 'cheap', but they are tuff, rugged, sharp looking, and still more cost effective/convienent, than piles of 'external' cases, each with costly powersupplies inside, and miles of external cable linking them together.

MkX chassis are still around...
You'd have to pop off a few emails to dealers to see who might have some, or would be willing to 'find' one for you. (Systems Solutions in UK kept them for quite a while).

I'm not sure how they (MkX) come and how the keyboard works.

>If not, what other options do I have to re-case my Falcon?

You can find a tower large enough, and build, or order cable extenders to get at all the ports. Most of them are simple to build, or you can order various kits, or parts from Wizztronics (such as cartridge port extender, Mini-IDE to Standard IDE, etc.).

Systems For Tommorw (http://www.SystemsForTommorow.com) once listed in a catalogue that they kept a few LARGE towers in stock that 'should' be able to house a Falcon.

Now...I forget all the links to places I've mentioned...and more that I haven't. If you point your browser to:
http://launchpad.atari.org

You can find them (and more).

>Hi all!
>
>Can anyone tell me if Telstar is still supported? Its written by Peter
>Rottengator (sorry if I've spelt that wrong! :))

I've emailed Peter about Telstar in recent months...
He does still support it, and possibly will work on it some in the
future, but he's also very very busy with work, life, and STing itself.
Telstar didn't 'seem' to be highest on his list of things to do, and
can't say that I blame him :)

>I've tried most of the (STiK/StiNG support) Telnet clients, but this
>is by far the most usable. I'm mainly using it to play MUDs (Multi
>User Dungeons), but it could do with some extra features, such as an
>address book, and scrollbars.

I agree...this is the best telnet client for STing...
It does have an address book! When you click on the open connection
menu, and get the dialog to enter a url, just click on the blank once
with the mouse, a menu will drop down, and you'll see all the places
you've logged in (this 'might' require MagiC, or Wdialogue in your auto
folder). It also has a logging function, where you could keep entire
sessions on your disk for back reference.

I too would love to see more functions added to TelStar however...
First being full Scroll support for split windows, etc. And eventual
ANSI color support.

Really...if you're INTO your MU** games, like I am...here's some tips.

Easy! If you've an ISP with a unix shell account, see if tiny fugue
is installed (log in and type tf). If it isn't, install it yourself!
Then telnet to your ISP (or use a conventional dial in ansi term) and
use TF for MU*. TinyFugue displays fine via TelStar, but you will have
to disable scrolling in split window mode (typeing /set scroll=off).

Next...I'm not sure what machine you use...
But there is a version of TF for MiNT and MiNT-Net, that you could
install on your own machine. I've used this under MiNT/AES4.1/Tos_Win
and it does okay...but there are some problems in my set up under Tos_Win
in the term-caps and such...but it all works fine on regular vconsoles
or in regular tw52 mode (no color support then however).

What is TinyFugue?
It's just the best MU* client ever designed :)

Brian

Well I don't know if you would be willing to switch to I-connect for this,
but the guy who gave us fiffi (FTP client) and soon chatter (IRC client) has
made an excellent Telnet client called Teli. It is updated quite often, has
loads of modern features, fully GEM interface. IMHO the best Telnet client
on the Atari.
But as I said, as of now it doesnt work with STiNG, so sorry if this message
was just a Teaser :)

5019. CAB 2.5 not so bad after all:-)

Newsgroup: comp.sys.atari.st
Date: 1999-03-22 00:00:00 UTC
From: kennethm@tripnet.se
Message-ID: <36f69bb2162b700@tripnet.se>
Source record: 82145

http://www.algonet.se/~jonasweb/ (a swedish page about html coding) opens perfectly in CAB (Ovl 1.3100) on both my networked Ataris. The pc with msie3.02 however simply responds "Could not open the page".

I tried this at the same time on all 3 computers. They are LAN-ed with Sting and maquerade. Very strange as other pages, including Javascript ones :-) loads without problems on the pc.

Maybe the server tries to initiate some nasty connection when it detects msie and simply rejects any further requests if this fails? Strange!

Btw. I don't think there are any free software that handles more than two "masqueraded" computers on the win-95-98 platform? Yet another reason to stay with Atari!

5020. Falcon/ Cubase Audio help

Newsgroup: comp.sys.atari.st
Date: 1999-03-22 00:00:00 UTC
From: ckg@mindspring.com
Message-ID: <36f6f414.97293211@news.mindspring.com>
Source record: 82146

Hi, thanks for checking my message!

I have a 4 meg Falcon and Cubase Audio Falcon 2.06.
CAF is the only program other than TOS on the hard
drive and I'm only using the sequencer portion of it.
Last night in the middle of writing a song Cubase locked
up (suprise, but at least it's not as bas as the PC version!).
I re booted and when I opened the Cubase folder there were
only 2 files of the approximately 40 or so that are part of the
program. One of the to files name was just random non
alphabetical characters and the other was my backup.all
file which was 0 bytes.

Does anyone know what this is about? How does a program
run one minute and the next lock up and erase itself?

I just dragged the Falcon out of the closet after not using it for a
while and formatted and error checked the hard drive and there were
no problems reported and also just for note, I do have the dongle
installed.

Any help will be greatly appreciated!!!!!!!!

Thanks!, Chris

Hi

I know the games, and have never heard of any problems. The only thing
that springs to mind is possibly virus infection or something else in
the boot sector. This would explain your friends machine now playing up.

You buy some plastic dye used by modellers (I can't remember the name ATM,
but a hobbyshop can help you), mix it with warm water and soak the case in
it. The finished colour is virtually indestructable.

5026. Calamus news

Newsgroup: comp.sys.atari.st
Date: 1999-03-22 00:00:00 UTC
From: Paal Monstad <pmonstad@online.no>
Message-ID: <atyJ2.485$jE4.3517@news1.online.no>
Source record: 82152

Dear Calamus user.

The Calamus originator company (DMC) no longer exists. MGI from Canada, the successor, decided in December 1998 to cancel all development and distribution of MGI Calamus Digital Publisher v2 (CP2) for Windows.

We know that many of you who get this mailing have been waiting patiently for the new native Windows Calamus and therefore have ignored all information about the original SL version of Calamus. We are still developing and expanding Calamus SL here in Germany, but many of you believed that Calamus SL is old Atari stuff.

When MGI decided to not bring CP2 to the high end publishing market, we asked ourselves how we could help those of you who want to continue working with Calamus under Windows. We had no chance of translating the Atari Calamus in such a short time to Windows, and this would have made no sense at all because of the almost finished but cancelled CP2. Instead we found a way that you can use Calamus SL99 directly under Windows: A tiny invisible, non-intrusive emulator does the trick. The most important fact is that you can finally use the latest version of Calamus, take profit from our great variety of optional modules, and of course use your Windows system printer drivers.

If the above sounds strange to you because you are a long time SL user who does not work with the Windows version of Calamus, be assured that SL99 still works with all relevant TOS systems (Atari TT, Falcon, Medusa, Hades, Milan etc.) - and much better with MagiCMac on Apple computers.

MGI Calamus SL99 works with all relevant TOS systems (Atari, Medusa, Hades, Milan), on Apple computers (G3, PPC or Mac with MagiCMac), and with Windows95/98/NT (emulator included!).

SL99 is the actual Calamus for all platforms with only one document format for Mac, Windows und Atari! The Windows pack version comes with an embedded emulator, allowing you to use SL99 with no additional installation trouble. Now as before, we spend much energy in fixing old bugs and implementing new features. It is most important for us that Calamus is stable; this version has a degree of stability much greater than previous versions.

We recommend SL99 to all Calamus users who decided not to upgrade before. SL99 Calamus gives you many enhanced functions and lets you create your documents with even more powerful and

professional tools.

Here are the most important new features (since 1995):

Old SL and Windows Calamus documents can be loaded.
Very important for Win95: SL does not need a Transparency module.

All dialogs have been modernized.
The Mask Module is integrated in the Frame Module.
ScaleIt for text frames is embedded in the Frame Module.

The most important new features since SL98:

Automatic Esthetic Text Justification: Some characters may now
reach over the right resp. left border of the block text,
according to their weight to give the appearance of an optically
smoothed text block.
SuperScript/SubScript: Position and size can be defined now.
New text ruler type: Grid Raster. Now you may set your text very
simply in perfect base line registers (even with more than
one register on each page!).
All kinds of frame types may be anchored in text frames directly
from the clip board, when you work in text edit mode.
3D dialogs (when using a multitasking AES like MagiC...)
Redesigned frame handling (copy frames when dragging them with
the mouse, new mouse pointer forms for visual
replies etc.)
Calculation functions in coordinates dialog (+ - / * ^ and
brackets)
You may change image frames between all available color schemes
finally, to and from: Monochrome, Grey, Grey
(Palette), RGB, RGB (Palette), CYMK.
Frames can be placed beside documents in the document frame, but
visably. Very interesting as an alternative work
area.
New GEM Import driver in standard package.
Completely redesigned dialog handling: All dialog objects can be
reached by keyboard, similar to MS Windows.
All lists in dialogs can be reached (scrolled, selected) by
keyboard.
Raster CacheGenerator can be called from Print dialog.
Raster CacheGenerator can be switched off on the fly, giving
access to the built in Ordered Dithering Raster (very good
for InkJet printers).
You can optionally Save Settings automatically when quitting
Calamus.

The most important new features since SL99:

Type 1 Fontloader: Besides CFN fonts, you may finally use Type 1
PostScript fonts in Calamus directly. Both PC (suffix
PFB) and Macintosh format are supported. (Calamus SL99 cannot

load TrueType fonts yet!)
You may save your SL99 documents with embedded fonts (no waste of
time any more when searching fonts for reload of
documents!).
Define double clicks in document windows (e.g. a double click in
a text frame may call the text editor Eddie).
When moving text ruler Tabs, a vertical help line is shown now.
The module panels are placed in real windows.
The Create Frame mode is no longer the default, so you do not
have to click the right mouse button for mode changes
that often as before.
Preview available, first of all for fonts and some image formats
(document and module preview still under process).
Images can be decompressed when Fixing Document.
Help Text color can be defined now.
Calamus SL no longer has a general print resolution limit.

Additional modules/drivers in the SL99 package:

Text Editor EDDIE light
Control Curve Editor FrankLIN light
Histogramme Module
GDPS Module
Gridplay Module
HKS Palette Module
Toolbox PLUS
Preview Modules
invers Barcode Generator Module
Imposition Module light (Output limited to 720 dpi)
Raster CacheGenerator, very enhanced features and handling
Pling Module (optional bell signal after printing)
GIF 89a Import driver
Megapaint BLD Import driver
JPEG Import driver
Photoshop EPS Import driver
Kodak PhotoCD Import driver
General Two User Licence (for 1 SL Serial # in a single
location).

Calamus SL lives in three worlds!

Since MGI cancelled the development of Calamus for Windows, only one
Calamus is available: SL is solid and well established.
Only one document format for all three platforms! There are no exchange
problems any longer between Calamus for Windows
and Calamus for Apple and Atari. Here are explanations to help you
discover which upgrade version fits your needs best. You can
use SL99 on three different platforms:

Atari Computers:
If your Atari computer (Milan, Hades, TT, Falcon etc.) has at
least 4 MB RAM, a screen resolution of 640x480 or more

(monochrome, 16 c, 256 c or TrueColor) and at least 10 MB free
space on harddisk, simply start with the upgrade as is.
Please choose the SL99 TOS Pack.

Apple Computers:
Please choose the SL99 MacPack. Important: MagiCMac and NVDI are
required for usage of Calamus SL and are not
included in the upgrade price! If you did not use Calamus on your
Mac previously, please order MagiCMac/NVDI too.
You get a high speed complete TOS emulator for MacOS and will be
able to use other Atari software in addition to
Calamus SL on your Mac.

Windows95/98/NT:
For Windows you will find a great variety of combinations. Please
stop to check which of the following types best fits your
needs. IF:
1.You worked with Calamus for Windows previously and want to
crossgrade to Calamus SL99 on your Windows
PC? - Please choose the SL99 Windows Pack.
2.You already own a TOS emulator for Windows and want to use
other Atari software with it? - Please choose the
SL99 TOS Pack.
3.You do not have a TOS emulator and do want to use other
Atari software beside Calamus on your Windows PC?
- Please choose the SL99 Windows Pack and the upgrade to
the STEmulator GOLD version. You get a modern
TOS emulator with MultiTasking (MultiTOS), enhanced VDI
and a pretty Desktop (Thing) included, which fits to
your Windows system. - The alternative at even higher
speed, but also at higher costs, is the new release of
MagiCPC with NVDI.
4.You want a TOS emulator for Windows and would like to use
Calamus SL99 with your Atari and/or Apple
computer, too? - Please choose the SL99 TOS Pack and one
of the recommended TOS emulators for Windows
(see our price list). If you still do not have a TOS
emulator for Apple computers, please order MagiCMac and
NVDI, too.

IMPORTANT: If you want to get both the SL99 Windows Pack and the SL99
TOS/Mac Pack, we have to add 30 DM to your
invoice. Please keep in mind that we only ship on HD floppies.

What about old modules, drivers and fonts?

All modules and drivers which are a part of the Calamus SL standard
package will be shipped with the actual version. All
additional modules and drivers from MGI (DMC), adequate systems, FRS and
invers that are registered here for your Calamus
version will be added to actual versions if neccessary. Your old CFN
fonts can still be used.

If you own additional modules for a Windows Calamus, we will add the SL equivalents, where possible. Example: You bought
Bridge v2.0 for Calamus NT 1.0, you will receive Bridge 2.0 for SL with your SL99 upgrade. We will offer an upgrade to Bridge
3.1 with enhanced functions with the shipment.

Translated from German original mailing by Ulf Dunkel, reviewed by Fred Bruch.

That might be my Falcon.....recased in a big desktop (3 x SCSI HD's, CDROM, decent speaker kit in a 5.25 bay...) painted metallic purple with metallic green stripes and luminous yellow logos.....I still think the best custom job I've seen is a wooden cased (like carved wood) TT....

Source record: 82163

Please help an Atari Newbie.....
A member of my family has inherited an Atari STE-520 (?) and would like to use it for typing simple text. He understands that he needs a 3.5" floppy called Discovery Xtra DE-1 Language Disk (?), which he has but believes to be defective. Can anybody tell me where I can obtain such a disk or its equivalent- preferably from the Internet ?
Next question :- Can such a machine communicate with a modem to allow e-mail to be sent via the internet, and how can this best be done ?
Any help would be greatly appreciated.
Thanks.

Sorry I missed the original post...

You can use null modem transfer if you want to have fun with cables!

I use HS-modem 7, Connect 2.46, all running under Magic to enable me
to connect via null modem 9-pin cable or LAN cable to either Mac or PC
or TT etc...

I can send TO Mac via LAN port at 230400 baud with NO errors (Can send
a megabyte in around 35 seconds). I can only manage receiving data TO the
Falcon030 at around 115200 baud (some CRC errors giving speed of mega-
byte every 80-90 seconds).

regards,

Chris Wilkinson,
/|\ ATARI Falcon030.

Hi Dennis,-

FYI,- the CAB.OVL that comes together with the IConn packed is not made by Alexander Clauss.
AFAIKT it is made by a man named Sven Kopaez.

And the combination IConn and CAB is very stabel on my system. As is MagiC.

My reason for mention the unspoken browser, was for some of the feature with that program I do like to see in a future Atari browser.

Like the edit option that lets you highlight some of the text on a webpage, and save only that part as text.
Or the error repport option, that gives a list of all errors on a page, a very useful option if you make your own code.

The optimizing of the code they where talking about are the code for the unspoken browser. It is translated from Pascal into something else with
Codewarrior on the other platform. But we (Atari users) could use a little optimizing to, especially regarding loading of images.

Regarding the future of new application for Atari computers. Well, - if we don`t support the programmers that trying to make a living we can`t expect anything. It`s not like 10 years ago, when programs where pouring out of every shool all over northern europe, with tons of programs every month. And some very interesting to. I still remember some of these amasing programs, like a CNC-simulation, a Kraftwerk simulation, Ariadne, Showtime Moviemaster and many others to. And all was PD.

cheers

Joergen

All Video Game Advantage (VGA) FS/T lists are updated approximately
every ten days available on the WWW at http://www.io.com/~vga2000/

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

The 'Sale Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

*IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT**IMPORTANT*

This list was last updated on 03/22/1999

NOTE: There are currently 1958 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

NOTE: The Video Game Advantage Definitive Known Software List
Collection is currently on-line! Unfortunately, there is no
list for this system (cartridge and CD based systems only).

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped! Includes box and manual]:
$ 4.00 Art & Film Director (Epyx) -- $4.30 shipping, due to
weight, counts as 1st item
$ 3.00 California Games (Epyx)
$ 3.00 Death Sword (Epyx)
$ 2.00 Devon Aire (Epyx)
$ 2.00 Dragon Scape (Free Spirit)
$ 2.00 Final Assault (Epyx)
$ 3.00 GFL Football (Gamestar)
$ 2.00 Lands of Havoc (Antic Software)
$ 2.00 Mean 18 Famous Course Disk Volume II (Accolade)
$ 3.00 Metro Cross (U.S. Gold / Epyx)
$ 3.00 Paint Pro (Abacus Software)
$ 2.00 Prime Time (First Row)
$ 3.00 Quadralien (Spinnaker)

$ 3.00 Renegade (Taito)
$ 3.00 Stunt Track Racer (Microplay)
$ 2.00 SwiftaR (Accustar)
$ 3.00 Techno Cop (U.S. Gold / Epyx)
$ 4.00 Warship (Strategic Simulations, Inc.)
$ 3.00 Winter Games (Epyx)
$ 3.00 World Games (Epyx)
$ 3.00 World Karate Championship (Epyx)

SPECIAL: Buy one (1) of each listed title and receive 10% off.

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3.20 for the first game and $1.10 for each additional game. Shipping for hardware and accessories depends on the distance that the order must travel. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed. There is no minimum order.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order
-drawn from a U.S. bank branch-, or cash. Orders from outside
the U.S. are also accepted (also, please check out my want
lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your
order *BEFORE* you place it,
3) next e-mail me a list of the items that you are interested in
(please quote from the FS/T message, but not the entire thing!),
4) also include your full name and full postal mailing address (this
information is for internal VGA use only, and is REQUIRED!),
5) I will reply with a shipping information message for your order.

Thank you!

Interestingly enough, during the whole Microsoft trial, some consumer groups have voiced their opinion that, for every legitimate Windows purchaser whose machine crashes, Microsoft should receive a lawsuit.

Unfortunately, Microsoft is one of those companies that uses the following legal mumbo-jumbo, which would prevent any user from ever sueing them:

"This product is not warranteed to be suitable for whichever intended purpose... "

This is normal since the PC can't use TOS compatible partitions. You
have to create DOS compatible partitions on your medium in order to use
it with both the PC and the Atari. On the Atari MagiC, MiNT or Big-DOS
are required to use these partitions.
An alternative that requires no additional software at all is to create
a partition that is both DOS and TOS compatible. This is supported by
HDDRIVER, see http://acp5.chemie.uni-kl.de/seimet/atari_english.html.
HDDRIVER also supports special ZIP features like read/write protection,
passwords, auto sleep and auto park.

If you have erased the desktop.inf file, then no icon will appear. You
need to reinstall an icon for the C drive, and save the desktop.

But before that, when the computer boots up, do you see the lines of
AHDI driver detecting the disk flashing past? If not, try reinstalling
the driver with the AHDI package found in the Quick FAQ.

You can use CAB in a text only mode. I think Lynx has been ported to
MiNT too, just like most of Unix text based clients.

Hello
Thanks to Dennis Vermeire,Robert Schaffner,Chris Crosskey.

I'm going to try to ask you not in the same way

A) Can I copy ?

- I write the first session on my CD,in multissession mode
(with "no more session" off)
- Then I can see this first session on my CD,but can I copy
this first session on my HD,in spite of the multissesiion
is not closed,or I have to wait for to close the multissession
to copy this first session ?

Generaly ,I know I can continue to write on my CD,while the
multissession is not closed,but can I copy a session from my CD,
while the multissession is not closed ?

B) how ?

If I can copy a session while the multissession is not closed,how ?

I proceed like this:
- I write a first session(in multissession mode) on my CD
- I click on the CDWriter icone,I can see a file track01.prg
- I drague and drop this file track01.prg on my HD
- obviously I cannot use this file,it's not the file I have
written
best regards RJ

Actually I hate them. Much too large, noisy and clunky. A modern
computer should look more like a PalmPilot or a Psion if you ask me. I
love my STE and Falcon in a large part because of the all-in-one compact
design. I even have friends who come around and ask where the CPU is.

I wouldn't say can't spell, for those with a little common sense will
have noticed it as a typo. Have you looked where the letters are on the
QWERTY keyboard! If not let me enlighten you;)

The letter 'P' is next to the letter 'O'.
The letter 'D' is next to the letter 'S'.

English English is different than US English;)

I can see it's goimnfg tpo bve oibnew of those datyas:)))

Nick,

another one to discuss endlessly... I loved my first STfm, but in the end hated the whole box attached to the keyboard. It took too much room, was too bulky, etc. Then again, the box is too small to accomodate hardware upgrades.
So when I got my TT, I enjoyed the separate keyboard and the desktop housing to act as a monitor stand. Next came the upgrades, and the box was too small again. So in came the separate tower to accomodate the extra gear and to feed the equipment. Yup, it's noisy but it won't beat the TT fan (the idling Pratt & Whitney J-79, remember?)
The advantage of the stuff is you can put them under your working table, do something about noise abatement.
As for servicing, the STfm, Falcon and TT housings are a disaster. Glad there are "meccano-boxes" like the average towermodels. 6 screws and you're in. Bloody Atari plastic, you tighten one screw and the studs break loose, or you unscrew the wrong one and the diskdrive breaks loose, whatever. Change the stupid PSU, half-a-day of work. Do it on a towermodel, maybe 15 minutes.
Not to mention the fine metal shielding, I believe only required to get US licenses. On my first STfm I cut the thing to only cover the videoshifter etc. Saved me hours of work in the end.

But for looks? I still love the TT for that after all those years, including its keyboard. Time and time again I have to SEARCH for certain keys on a Peecee kbd... :-)

This sounds like you have SPIN running as file system, and it hasn't recognized th filesystem yet. Try forcing a media change with forcemed.prg or by pressing shift-ESC (in the right desktop...). -- Julian Reschke (mailto:reschke@muenster.de)

You can always copy a session to HD, it does not matter whether the
CD is closed or open....

>B) how ?
> -----
>If I can copy a session while the multissession is not closed,how ?
>
>I proceed like this:

> written
Aha, Now we're getting somewhere....
You did not create a DATA CD, but a AUDIO CD.... if you would put the
CD in a CD Player, track 1 should start playing....-))

What you want to create, is a CD which holds your data....

Proceed like this:
When you drag a audio file to the trackmanager HOLD the shift key,
this way a ISO track will be created, if you do NOT hold the shift key
a audio track is created. You can see the difference in the manager:
a audiofile has a music symbol in front of the file name. A data file
has nothing in front of his name.

You can always check in the first upperline of the trackmanager what
kind of CD is going to be created: CDROM, AUDIO, MIXED MODE, CD EXTRA,
RED BOOK compliant etc....

If you like you can also create a CD EXTRA:
In the first session you create a audio CD, and then write a normal

data track into the second session. The format of the CD will change
to CD-EXTRA. Now the Atari can read the data in the second session and
the CD player will play the audio from the first session.
Proceed like this:
Drag 1 or more audio files to the trackmanager without holding the
shift key, burn the CD in multisession mode....
Now drag the same audio files to the trackmanager HOLDING the shift
key the CDROM format will change, close multisession and burn.
The final CD will hold your data as DATA and also as AUDIO tracks...

With the CD EXTRA option you have the best of both worlds....

That should do it...for now?

Good Luck and have fun (that's what CD burning is all about)

Cheers from Belgium

Dennis

5065. Re: iCAB (the unspoken browser)

Newsgroup: comp.sys.atari.st
Date: 1999-03-22 00:00:00 UTC

Source record: 82232

Hallvard tangeraas <hall@post1.com> wrote on 21-03-99:

>Now, what should we do next? We could probably discuss iCAB and the
>future of CAB for a long time to come, or we could do something about
>it.
The sad thing is that we can't do anything about it....we can make this
the longest thread ever but it wil not do any good.
What we can do....is look forward !!

OXO Systems announced this morning that WENSUITE III version 1.0 is now
available together with a new product EXPRESSO 1.0
The betaversion of Wensuite 3, was lousy but it was a beta after all,
perhaps the final version will be OK.

EXPRESSO is a WYSIWYG HTML page designer, supports multiple frames,
animated and transparent GIF and according to oxo systems is very fast
because it's build around the same engine(?) that drives Wensuite.

According to oxo systems, Wensuite can now handle frames, animated
graphics and is very stable, the email and newsgroup modules work
together perfectly and Wensuite is still the fastest browser on the
Atari.

Updates to Wensuite are free
Disk version = 80FFr or ï¿½8
CD version = 130FFr or ï¿½13

Expresso for Wensuite users = 300FFr or ï¿½30
Expresso standalone = 490FFr or ï¿½49
Expresso + Wensuite III = 590FFr or ï¿½59

According to Oxo Systems HTML 4.0 and Java Script will be featured in
the coming updates from both Wensuite and Expresso

Another way forward may be DRACONIS PRO

According to a press release this program will be available at the
Atari Messe next month.

DRACONIS will know JAVASCRIPT
a email, ftp and telnet module is included

price = unknown

These two programs may offer a way forward, but not for all of us...
Both these programs come with their own propriate drivers TCP/IP
drivers and are not compatible with STING/MiNTnet....

Somehow I also think that ASH can not affort to have a out of date
browser in their productline, so maybe they could suprise us also
with a new product.. maybe CAB 3.0 programmed by new ASH wonderboy..-)

Cheers from Belgium

Dennis

I think what our original poster was curios about is if there has been a browser that would work (like the text only Lynx) that would work for the lower end ST machines... like a regular ST with 512K or even 1 meg.

A pretty tall order. From what I've gleamed, Cab uses roughly what? 2 meg of ram?

I'm curis myself since I have a 1 meg 520 and would like to check E-mail with it (and newsgroups)

Thanks!

Doctor Clu

5072. Sinister Games not working on 520 ST

Newsgroup: comp.sys.atari.st
Date: 1999-03-22 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36F67686.5F24@geocities.com>
Source record: 82239

Got ahold of Centipede, Millipede, Galaxian.. all those great games from Sinister Development (I believe they were in Scotland), and unfortunately when I try to play them on my 520 ST with 1 meg, they load up, the music's fine... but the program acts like it is having a problem with it's vertical hold.

In other words, rather than showing a stationary screen, the screen scrolls up and down like the Vertical tracking is off.

I've tried this on a regular color television, and a 1224 color monitor.

What REALLY puzzles me, is that these games when tested on another completely different computer (520 ST with 4 meg) did the exact same thing. (Color monitor on this test) and here's the kicker... it worked on this machine before!!

Alright, I'm puzzled here. Anyone remember these Sinister games and encountered similar problems?

Thanks,

Doctor Clu

5073. Annual HobbyFest Report

Newsgroup: comp.sys.atari.st

Saturday, March 21st, was the day of the annual HobbyFest here in Eastern KY (USA). Its a "get-together" of like-minded computer enthusiasts, role playing gamers (Star Wars, BattleTech, more), and Magic (the card game) players.

The DarkForce! BBS set up its booth in a corner next to a networked hub of 4-6 PC's playing Quake and Starcraft. (I did this on purpose-the players couldn't help but notice us). I took my Nemesized Falcon, in a DeskTopper case, running MiNT, with a 17" monitor and my brand new Yamaha CDRW drive. We also had an STe running some games (for example StarDust, and later we ran Gauntlet 2 with the 4 player adaptor-lots of players there). We also displayed a Lynx with around 10-15 games, and of course a CD-ROM equipped Jaguar...

The show opened up at 11am and ran thru till 7pm that night. We had quite a few visitors, about double the attendance from last year. Our booth got a lot of attention. We had the Jaguar hooked up to a large screen TV that was on a stand that put it about eye level, so you could see it from just about anywhere in the exhibition hall.

We managed to let everyone their know that the Atari (after)market and users are still very much alive, and kicking. We had Systems For Tomorrow hand outs, as well as printed pages with listings of favorite Atari URL's, IRC channels, and newsgroups (ftp sites too). Multiple people were interested, and mentioned things like "boy, does that bring back memories!" and more to that effect. Everyone who saw my Falcon running a Unix variation (MiNT) were very impressed. Awards were given out, and while we didn't win anything, I was told that if there had been an "over-achievers" award, we would have got it "hands-down". ;-))))

Door prizes were given out also ($50), as well as a $10 prize for the winner of each game tournament. The prize that garnered the most attention though, was when we gave away a brand new Atari Jaguar... ;-)

Overall, I'd have to rate it a success, despite some minor difficulties (I had really been hoping to show off Battlesphere this year! C'mon Hasbro-get the lead out!!!). Anyways, I'm looking forward too, and planning on next years HobbyFest which is already set to expand and relocate. Heck, I think next year I'll try to take my 2600 and 8-Bit Atari's! ;-)))

PS Maybe, just maybe I'll be able to show off Tempest and Eclipse too? We can hope! ;-)

I was told that I should keep a little bit to the topic of this
newsgroup being: Atari.

Telling about my cat eating a spider is off-topic. I agree.

But when that spider came out of a Atari monitor it is not.
That raises questions I do not ask like:

Are Atari monitors good hiding places for VERMIN?

Can bugs make a short-circuit in Monitors so they start
smoking?

Are mice nibbling at cables very damaging?

Met vriendelijke groet,
Ronald van der Kamp
secretaris Stichting ST

5082. Dutch Atari mailing list. NEW!

Newsgroup: comp.sys.atari.st
Date: 1999-03-23 00:00:00 UTC
From: atarist@xs4all.nl
Message-ID: <7d8p4a$b21$4@news2.xs4all.nl>
Source record: 82049

For many years we had a nice 'area' in the Fido network about Atari
and related stuff. Something like this newsgroup but then smaller of
cause.
But last year very fast everybody diappeared. Internet is everywhere
now for everybody. When the group started that was not the case.

So where are all those people now?

I really feel the need for a local Dutch talking medium.

Starting a newsgroup is maybe to much. So there is a mailing list
organised.
All messages are send by e-mail to all members exactly mimicking the
way Fido was used.

So do the following:

send an empty e-mail (also no subject) to

atari-nederland-subscribe@egroups.com

The you get immedialty an e-mailfor verification wha you want:
according to instructions you send that message back.
This is folowed with a message you should store in case you want to
unsubscrbe.

The name of the mailinglist is

atari-nederland@egroups.com

I know it is commercial but if they use nasty advertising we find
another solution.
For the time being: try it out.
If nobody joins it is a Dead Dutch Dodo.

Met vriendelijke groet,
Ronald van der Kamp
secretaris Stichting ST
atarist@xs4all.nl

> Like I said this is a long shot, I could be miles off-)))

No, not a long shot, but spot on as usual Dennis! :)

It is the 50/60Hz switch that is causing problems. If I remember correctly, these games have an internal option to toggle the 50/60Hz mode.

The reason its done is that on some monitors and TVs, this gives a bigger and more stable display. However other monitors and TVs can't cope and give the problems that Doctor Clu has described. My TV (a SONY Triniton) copes well with it, and loses the large borders at the top and bottom of the screen. When I had an ST (I now have a Falcon :)) I used to have it in 60Hz mode all the time, just by putting the seperate 50/60Hz patch in the auto folder, it being only some 50 bytes in size.

Yep, Fabeltjeskrant used to be very popular here in Belgium. It was very
nice to look at. Sometimes we still talk about Bord de Wolf, Juffrouw
Mier, Zoef de Haas etc... They don't make such good children prg's
anymore.

Yes, that's a must. I modified the hole bracked, pictures on my
web page. But it is ok if you use insulated spacers under and
leg of the bracked. Works fine. Better as a shaking 3.5" device.. :)

Also you can move the machine without press the tumbs to the ide.. :->

Next DOIT-Release (6.5.0) contains more tips about that..

that's actually a fair question, as certain type of bugs
(particularly cockroaches) like hiding inside electrical equipment
because it's warm and dark. I'm not sure that it would be a common
problem (although I thought I heard about one story about one computer
going down because a Palmetto bug (a large cockroach common to the
southern US) had gotten inside and shorted itself on the motherboard.
Indeed, I remember a story in ELECTRONIC MUSICIAN on this particular
problem (and they suggested putting a Combat® trap inside it).

>
>Are mice nibbling at cables very damaging?

probably mostly to the mice :) Have you ever seen "National
Lampoon's Christmas Vacation", where a cat lost all nine lives at once
pulling a similar stunt with a string of Christmas lights?

(I hope you don't think me a cat hater with the above - I actually
do like cats)

As I recall, the computer term "bug" arose from a problem created by a real bug back in the days of vacuum tubes...

I have three cats I love dearly, and it occasionally befuddles people that the scene you mention makes me laugh _every_ time I see it. I think it's the POF! sound effect...

I guess I just know how to distinguish movies from real life. It seems fewer and fewer have this ability these days...

This is a long shot..... have you looked if in the autofolder there's
a small program who switches resolution from 50 to 60 Hz and viceversa?
If there is, that's the cullpritt, throw it out.....

Another long shot..... load a resolution switcher and set it to 50Hz,
then load the game.....???

Over here in Europe we use 50Hz, to get a more stable picture we can
switch to 60Hz. Some softwarehouses incorporated this on the games.
Because, these are switchers they assume when you are running in 60Hz
and start them you want to switch back to 50Hz... hence the scrolling
on a 60Hz Tv/Monitor....

Like I said this is a long shot, I could be miles off-)))

>E-mail with it (and newsgroups)

You don't need a browser to check email and newsgroups.
STING doesn't use much memory and nearly all available clients will
run in 1MB, I wouldn't be suprised if most of them even run on a
520 ST.

check out:
Newsie => ftp + newsgroups
amail => email
There are lots more but these two have a low memory consumption.

CAB 1.5 should be able to run in 1MB, provided you switch of the cache
and use text only viewing....

This is happening because your FAT (File Allocation Table) is corrupt.
Why this happens is one of the greater mysteries of life... well not
really, there are various reasons but I leave these for the guys in
this group who can explain it better in plain English....-)

Atari in all their wisdom provided a second FAT on your partition,
with a simple tool you can copy the contents of FAT2 into FAT1, and
your problems might be gone. I said might because this doesn't always
work, it depends on how much was overwritten before you noticed that
things went wrong....
Supposing you get your data back you're not there yet. Make a backup
and repartition harddisk, do a very extensive check , cross your
fingers and get back to making music....

Some good programs to help you when you encounter problems like these
are: EDGE, DISKUS, KNIFE ST

I'll send you the tool with a Personal Mail
Good Luck

Cheers from Belgium
Dennis

PS: Atari keeps a spare FAT just in case....with a PC you're out of
luck...-))))

5113. 19" rackmount atari

Newsgroup: comp.sys.atari.st
Date: 1999-03-23 00:00:00 UTC
From: xav@compsoc.man.ac.uk
Message-ID: <7d7d1j$8ms$1@roch.zetnet.co.uk>
Source record: 82177

In a former life as an exotic dancer, jim <jim@studio9.demon.co.uk> wrote:
> I recently salvaged a 19" rackmount box from a skip and stripped out whatever was in it before (broken anyway). I'm considering rackmounting my STe. Two questions, 1. can you get TT/mega style kybrds still and can you get extended cables for these (3metres?), also mouse ext?. 2. Does anyone know the exact dimensions of the STe motherboard and PSU so I can see if it fits without gutting my STe?
>
> jim
>

I rackmounted an STFM a few years back, in a standard case from Maplins. The motherboard was slightly too large, and I had to trim about 1/4" off each side. Thankfully there's a large ground rail that can be cut into, and they even included a series of holes to help yu cut it in a "join the dots" fashion.

You may find that this is not necessary, depending on the design of the case: the Maplin ones have a double thickness wall and don't stretch to the full width they could because the screw heads stick out of the sides. The best bet is to try it - the ST motherboard is fairly simple to remove and quite robust. Of course I should mention static precautions and all that at this point, but in practice I've found that it's remarkably difficult to destroy ST motherboards, even with extreme stupidity.

Someone else may be able to help you with the keyboard question. I began by remounting the existing keyboard in a case made by cutting down the STFM case and adding a back. Later I fitted a socket to let me use a Mega STe keyboard.

Note that MIDI, cartridge and EJP ports will need moving if yuo use them. The MIDI and EJP ports can be put on the front or back with short extension lead with no problems. If the cartridge port is only needed for small dongles, and the rack case is deep enough, you can desolder this, and remount it "on its back" so that the socket points upwards. This works well, and my STFM used this technique together with a home made extension cable to let me fit my Unitor MIDI interface internally. If you're a MIDI person, you might like to add a switch to let you select between rear and front mounted MIDI sockets - handy for attaching something temporarily.

The floppy drive wil need a couple of brackets to attach it to the case, but it's nothing too arduous. I'd also recommend removing the power socket from the PSU and fitting it to the case, then wiring it through a front mounted mains switch. You can leave the old switch in place, permanently on, or lose it altogether. Either way, it means you can switch the machine on/off from the front.

You'll probably want to play a similar trick with the reset switch - you need a changeover switch to replace the existing switch.

Don't get the impression that it's a tricky job - all the bits are quite simple. It will take some time, but it's well worth it. The hardest bit is cutting the holes for the floppy drive and sockets at the rear, but if you give the final system a lick of paint, some nice Letraset labels and a spray of laquer, you'll have something to be really proud of. And with enough space for internal hard drives and the like.

There are a couple of differences in the spec according to Toshiba's web site, but nothing to worry us AFAICS.

I've just popped a 2110 into my CT2'd Falcon, the only problem I had was that I had to insulate the mounting cradle from the motherboard with Nylon bolts and plastic spacers as there seemed to be some kind of earth loop issue.

5115. FS/T:520ST WTD:SCSI Host Adapter

Newsgroup: comp.sys.atari.st
Date: 1999-03-23 00:00:00 UTC
From: midigear@gis.net
Message-ID: <36F7402C.EDA294CB@gis.net>
Source record: 82179

FS/T:
mint condition 520ST which was hardly ever used (100% working).
It's just the computer (no floppy drive or mouse),
but comes with both power supplies for the computer
and the (missing) disk drive.

WTD:
host adapter/cable that will work with my Mega 2 ST (not STe),
preferably with case (drive fine, but not absolutely necessary,
as I have several older small SCSI drives laying around already).
This will be my first SCSI experience with the ST...

This is a very low priority issue, so ideally, I'd like to just trade the 520
straight for the SCSI stuff in the Boston area. (perhaps you have an extra
SCSI setup and wouldn't mind a spare ST in exchange...)

please contact midigear@gis.net

Ermm,

aMail not being a smart suggestion: it needs a modern AES, Olga for the
text editor, etc.

Newsie handles e-mail as well. I figure Newsie's the best choice on a
memory-limited system. Handles both off- and online news, e-mail, ftp and
basic (txt-only) browsing. What more you want?

Wow, the ST is coming back in fashion. That's 3 newcomers today.

> A member of my family has inherited an Atari STE-520 (?) and would like to
> use it for typing simple text. He understands that he needs a 3.5" floppy
> called Discovery Xtra DE-1 Language Disk (?), which he has but believes to
> be defective. Can anybody tell me where I can obtain such a disk or its
> equivalent- preferably from the Internet ?

No, he doesn't. The ST has all of its operating system in ROM, so you
don't need a boot disk. It came with a so-called "language disk" which
contained various obsolete programs (an buggy Basic and a control
panel). It's rather useless nowadays.

If he wants to type text, he really needs a word processor of some sort.
For a 512K machine, I would suggest Marcel or 1stWord which should both
be available on most FTP sites (see Quick FAQ for URLs).

> Next question :- Can such a machine communicate with a modem to allow e-mail
> to be sent via the internet, and how can this best be done ?

Yes, that's all described in the Quick FAQ. However, he might want to
consider upgrading memory. The STE takes standard 1Mb 30 pin simms and
is easy to boost up to 4Mb, which opens the door to more powerful apps.

5121. Has anyone d'loaded Avalon 2.1 from ftp.steinberg.de???

Newsgroup: comp.sys.atari.st
Date: 1999-03-23 00:00:00 UTC
From: screenstyles@hotmail.com
Message-ID: <7d81q6nge1@nnrp1.dejanews.com>
Source record: 82185

I have tried to d'load the v2.1 upgrade from ftp.steinberg.de on about five occaisions, and I have come to the conclusion that the file is corrupt. It appears to unzip OK, but when I try to run the program the loading screen is scrambled and I get a 'can't load AVALON.IMG' message, and the whole thing bombs.

I have Emailed Steinberg but (of course) they have completely ignored me.

Has anyone managed to d'load a working upgrade???

(I'm using v.2 on a 4 meg STf).

Paul~

->issue.
->
->Rgds, Derryck

Hi Derryck! Don't think that problem is specific to the Toshiba, Nemesis,
or C2. My original Falcon has two spacers between the HD bracket and the
motherboard. IIRC, some of the tech people from Atari recommended doing
this on all the Falcons with internal drives.

BTW, how does that C2 perform? <smile>

Its that time once again! (thunderous drum-roll please-if you don't mind) The Winners at the DarkForce! BBS this month are as follows:

1) Peatmoss (Peter Ross): 1 6 month/3 volume subscription to Atari Computing!

2) Centurion (James Krych): ST-Plus Fanzine!
3) 69 (Brandon Blackburn): ST-Plus Fanzine!
4) Starchyld (Chris Hall): ST-Plus Fanzine!

Congratulations to all our lucky winners. Don't forget-you too could be a winner if you call our BBS at least one time each month. All it takes is that one call, and it does not matter how long you stay on. Good luck to all of next months' callers! ;-)

PS You must take a permanent password the first time you call!

I think that, if you go to that website, there is a place to click and become a subscriber to the Calamus e-mailing list.

I did, and I'm glad. Thanks to them, I got hip to some new printer drivers and bought a newer printer. This revived my Calamus use and level of enthusiasm greatly.

Furthermore, going off-topic:

If anybody out there has a copy of 1.09N with the manuals to sell, there are some new Atari users who are interested in learning self-publishing out here in Eastern Canada. You gotta start somewhere.

Hello friends:

I am very impresed by "Tosbox" Atari Emulator for DOS. I am
prepared to pay the more then fare Shareware fee of $15.00.

I am runing without any problems Geneva 6 , Neodesk4 , Calamus,
and even Touchup and Cyber Paint! Cyber is a program I was never able to
run on my Falcon or any other sys other than a real ST.

I am using a 486 laptop Toshiba with 4 megs of ram and all works
well.

Runing the program was very easy , just place the Tos.IMG file in
the same folder and type TB (tosBox) and there you go, Real amaizing!
Faster than Magic c PC and very solid :)

Raymond

> perhaps the final version will be OK.

Its fast but I hope the display has been tidyed from previous versions I have looked at. I once took a simple page and compared appearance on Netscape 4, IE 4, Cab 2.7, and the latest demo of Wensuite I could find and Wensuite formatted tables and other stuff differently from the other 3 which all looked very similar...

> EXPRESSO is a WYSIWYG HTML page designer, supports multiple frames,
> animated and transparent GIF and according to oxo systems is very fast
> because it's build around the same engine(?) that drives Wensuite.

Interesting stuff! Make Wensuite STinG compatible and we'd be cooking!

> According to Oxo Systems HTML 4.0 and Java Script will be featured in
> the coming updates from both Wensuite and Expresso

About time! I'm learning Javascript on my Falcon, but need to save to floppy disk and visit my Father all the time to check if my scripts work or not (he uses PowerMac 7220/200 with Netscape 4.5).

> DRACONIS will know JAVASCRIPT
> a email, ftp and telnet module is included

Also about time!! This is good to see! :)

> not compatible with STING/MiNTnet....

Hopefully this can also be remedied...

Regards,

Chris Wilkinson,
/|\ ATARI Falcon030.

PS. Does anyone know how to make frames invisible in CAB 2.7?
If I write a frame laden page and make the frameborderwidth = 0 in Netscape and IE the borders are not visible (but still there). This is really handy to create neat frames with the background images tiling on to each other. I really get ticked off having to continually use a Mac to check it looks OK...

Source record: 82074

I have been thinking about this for a while. The more I use TosBOX Emulator the more I ask:

If Tosbox without any windows garbage can run Tos 2.06 soo well on a 486 4 megs Toshiba that It can Run Geneva, Neodesk4 Calamus and even Old Cyber Paint without any trouble, why this software is not developed more so it becomes the Emulator and Os all in one and would not only be able to run the older Atari programs but also new programs that would take advantage of the faster more uptodate electronics? My idea is , forget of the Windows (Micro) stuff and use our great TOS in it. This would be a lot more practical and sheaper than buying expensive cards for the old STs etc.

This way TOS or whatever it would be called would be an "Atari" enviroment that could be run on the machines that are available everywhere and that are going lower and lower in price. I own many Ataris and love them, I think my Falcon is the greatest thing but the idea to run TOS PRG on a laptop is an interesting one. TOSBOX really runs the TOS programs very well and not once I had problems. It is great to be able to take this litle TOSBOX on the road and use the Atari programs I like soo much :) I got my first Atari because it was only on the St that I could run Notator.

to freeze the computer when recording audio track with the harddrive still spinning (LED ON).

is it a driver problem?
termination?
CAF bug?
RAM problem?
SIze of partition on which it is recording?
Size of logical sectors on this partition?
The BUS being too stressed?

What is it?

Btw, what is a real method to know if the drives are terminated correctly? I have tried many things, many of the config react the same.

Is the falcon considered a hub terminated? or not?

Help apprecited, This is "honestly" driving me crazy./ (I almost took the falcon and threw it out of the window. (I really was gonna do that :( )

Hello guitarra,

g> Faster than Magic c PC and very solid :)
Solid maybe, but not nearly that fast (even compared to the "old" slower version of MagiC PC), not that compatible and not offering nearly as much

options. But that's okay, because it's a lot cheaper ...

If someone has to/wants to look at the price, maybe STEmulator is a choice

too (but I don't know, whether an English version exists). Not that compatible, but as fast as the old MagiC PC and not so expensive.

Greetings, Oliver

>
> Hi there
>
> What kind of CPU sits in the Mega st? 680x0?

It's a 68000 running at 8MHz, just like a plain ST. The main difference
is RAM (either 1, 2 or 4 Mb) and the blitter chip, plus the keyboard is
one of the best ever made.

> BTW, if any of u guys know where I may find an excellent working copy of
> multitos of magic. (for download)

Those are commercial packages, so you have to buy them. Multitos is
actually MiNT+AES4.1, you can get the same from the kgmd/kemd MiNT
distribution.

I've done a null modem Win95 PC to ST PPP connection.
I don't knowexactly how_to for linux, sorry.

There is a newsgroup Comp.Protocols.PPP which might answer questions on the
linux side. For the ST side, you could set up PPP as per the following
documents:-

ftp://ftp.sol.no/user/h/hallvart/atari/info/stpc_nfs.txt
or
http://www.users.zetnet.co.uk/jacquesa/atari/stpc-nfs.html

Both links are taken from Hallvard Tangeraas's excellent pages.

http://home.sol.no/~hallvart/

The documents describe my efforts at setting a ST-PC NFS connection, using PPP
over a null modem connection. The document is getting on a bit, but the setup
information is still valid.

If you want a realy speedy ST emulator for the PC, try Gemulator. It's
very fast indeed. Way faster than MagiCPC, actually it's damned fast!

Alex has been aware of that bug since..... ages. We reported that
to him a number of times on the STiK beta-testers mailing list.
It's indeed quite annoying, but that needs to be fixed in CAB.
It currently ignores the value of FRAMEBORDERWIDTH.

I have the following to get rid of at Package and Postage only UK, UK.

MegaST mother board with 1 meg on board
4Meg MarpetX-tra Ram, with 1 SIMM, 3 SiIPPs
Elco HD floppy kit + manual
Auto overscan
AT-Once + PC emulator (2 of)

All the above sent as seen for P and P only UK only.

If any one has an Atari Mono monitor to Falcon conversion cable I would be intersted.

Bob King.

What's really amazing Paul is that Alf accused Atari Computing of being rude to everyone around here a few weeks ago! Sadly, he is one of those people that says things without thinking. I just wish he would respond to my responses to some of the ridiculous things he says, but no, he doesn't have the guts to engage in proper debate :-(((

Just a few weeks ago he stated quite definitely that AC had no more than 200 readers!

Surely a man that knows what he is talking about!

Kind regards

Mike Kerslake

How about using the open source "sox" package as a starting point and optimize
it if you think that you can speed it up?

Hi you all.

A new spring,
a new version of the this interactive disassembler.

You now can:

Mark 16 bit PC relative jumptables and generate corresponding labels.
Quick find the appropppriate indirect jmp's and jsr's.
Give names to 'absolute word' operand addresses.
Give names to standard labels.
Attach a short comment to an address.

It is on my web page: http://people.a2000.nl/hrobbers/Homepage.html

Have fun

Henk Robbers.

Hi Oliver:

Well, for some reason Magic C pc takes forever to load on my 486,
may be because of Win 95 which I may delete soon. Also the muse ponter is
way too slow in Magic on my 486. In Tosbox it is soo fast I had to turn
off the Auto Mause acc.! Also I was able to run:

Since) :)
Phasar, Cyber Sculpt and Mymail works also but have not got it on
line jet.

Phasar works quite fast as it is TEXT based.

I think Magic PC problem is the use of Win :(

Thanks.

Raymond

Hi Magnus:

I tried gemulator Win 3.11 and was about 1/2 the speed of Tosbox
may be Gemulator 98 would be fast but hate to have to use Win for that :(

Do you use CAF with CT2 or not ? How did it behave before installation ?

Saturax, a friend of mine did get some serious drive problems after having installed this card ... On its first Falcon he had to make an hard switch to get the Falcon working without one of the connected IDE drives ... Centek never succeeded to resolve the problem and even never did answer to his requests ...
So, now when he want to use the turbo mode he has to reboot and select only one hard drive because otherwise the whole Falcon freezes ...

Since a week I have installed a CT2B on my FALCON.

>get the Falcon working without one of the connected IDE drives ... Centek
>never succeeded to resolve the problem and even never did answer to his
>requests ...

About my problems now resolved:
1) No boot on my IDE disk (an old 420 Mb Conner) in turbo:
I have patched HUSHI.SYS and MAGIC.RAM for create slow routines, now it's
OK on TOS 7.0x (I can't boot on TOS 4.0x).
2) Problems with DSP clock (blue screen at start or crashs with DSP):
I have used clock signal on Quartz 50Mhz (my DSP is always at 50 Mhz, with
CT2 DSP clock you have 32 MHz in normal mode and 50 MHz in turbo). Now It's
OK.
3) DSP interrupt not works. I have made a modification, now It's OK. You can
found this modif on my pages (INTERDSP.ZIP).

I'am electronician.

Now Quincy and Aniplayer works without patch (DSP_IRQ.PRG) in auto folder.

I have installed only this programs for my CT2B (centek disk):
CBOOT for configure NVRAM and PUTFLASH for updates.
About some programs (Newsie for example), you must remove TT-ram flags
(or else crash).

But now CAB is 4X more fast, I'am happy !!!

Regards,

Didier.

The translation is mayby good but you're talking about another (recent)
kid program. This is one of the goodies of Children's BBC I guess. I saw
this prog on many occassions. Although my son doesn't understand a word
English he do love that progam.

Mike, I think it does...
To be honest, I think back in the 70's, the program was maybe even more popular amongst parents. Some of the items made absolutely no sense to (small) children, but were aimed at the adults. I remember eventually the program was done all over the world, probably with adaptions to local/regional situations.
Another all-time favorite is the Muppet Show... (heck, I must be getting old!)

Source record: 82107

The problem does not just lie in the termination. What you are attempting is part of SCSI clustering. 2 Hosts and a number of devices in between.

If your aim is to have one OR the other machines powered up, then the problem is with termination. SCSI devices tend only to be terminated when powered up, that goes for host controllers as well. So the solution would be to place terminator in.

<TERM>--<ST>--<ZIP>--<PC?>--<TERM>

How easy that is in actuallity, kinda tricky on the ST side if I remember correctly,

If your intentions is to have both machines powered on, then the problem lies with the host controllers. They need to support other controllers on the same chain, and one of them has to be able to take a SCSI Id other than 7.

<ST Host (Id 7)>--<ZIP (ID 5)--<disk>--<PC host (id 6)>

I haven't had chance to try it on my setup. But I don't think that it will work. If you get a chance, try it and let me know the results. I have a bit of experience with SCSI clustering, as it is we use it a lot in the DEC (now Compaq) Alpha solutions that my full time job involves me in.

How this has helped. Let me know (by e-mail if poss) how you get on.

Graham,

5179. StiNG script for Demon ISP

Newsgroup: comp.sys.atari.st
Date: 1999-03-25 00:00:00 UTC
From: jfhaslam@zetnet.co.uk
Message-ID: <7de70e$4t1$1@roch.zetnet.co.uk>
Source record: 81950

Hi there!

Has anyone got a script I can use for Demon UK ISP, for use with StiNG?

An accquaintance has got an account with Demon for his 4mb Falcon, but he proposes using I-Connect, which I don't think is suitable for him, as the clients are limited and the only emailer is commercial, unlike Newsie which is PD, but only for Stik/StiNG.

If you've got one, I would be grateful if you could email it to me, file attach (UUE or MIME please).

Cheers!

James

Greetings Atari Folks,

Has anyone found a way to get the Spectre GCR cartridge and
Software working on a Falcon?

If it will not work, Is it only due to the lack of a external 3.5
disk drive port?

Any help is appreciated.
phantomm@kih.net

5185. SuperCharger and other PC Hardware Emulators

Newsgroup: comp.sys.atari.st
Date: 1999-03-25 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7de4kg$3t2@news.ajou.ac.kr>
Source record: 81956

Greetings Atari Folks,

Was looking in a back issue of STart Magazine and stumbled
onto a SuperCharger IBM XT Emulator for the ST ad.

In this advertisement, were hardware upgrade options for
the SuperCharger, including the SCplus/NET, SCplus/286,
and SCplus/386.

If anyone has any of these upgrades and or a complete
SuperCharger with at least the SCplus/286 for sale or
trade, then e-mail me at the address below.

Anyone know what the last version of the SuperCharger
software is?

Was a 386 and a 486 upgrade made for the SuperCharger?

I have a SuperCharger with what I believe is the stock
chip and would like to upgrade it, or buy/trade another
complete SuperCharger system with a 286 or better.

I am also interested in any hardware hack or tips
for the SuperCharger.

Also, while on the subject, Is there any type of cable
or device I could use to connect the SuperCharger to
a Falcon?

I am also interested in purchasing any other PC hardware
emulators for the ST/STE/MegaST/STE TT and Falcon.
If you have anything like this for sale then contact
me at the e-mail address below.

Thanks,
phantomm@kih.net

>
> What do you mean by
> 'no "unconventional" ways to allocate memory'

That programs can only use Malloc() or Mxalloc() to allocate the memory (explicitly) or they can use Mshrink() to do an implicit allocation. Alternatively, a program can ignore Mshrink() using a default amount of mem assigned to it by the system. In either way the limit should work.

And, by definition, only the memory allocated (using aforementioned system functions) is considered owned by the program. So, if the system knows, that the PageStream owns certain amount of RAM, that means the PageStream has requested this RAM using one of the aforementioned system calls, and was granted the memory by the system despite the limit set.

Using the Malloc()/Mxalloc()/Mshrink()/Mfree() calls, which are standard GEMDOS memory related functions, is the "conventional" way
and there are no other ways of getting system memory. That was what I meant.

AHDI (the Atari Hard disk utilities) which include ahdi.prg (the booter
you can double click on and run) shdriver.sys(the booter on the boot
sector of your hard drive - that is ahdi.prg installed on your hard
disk)
hdx.prg prg to partition your hard disks and install shdriver.sys on
your
boot sector.
the hard drives you have were either MFM or RLL(sounds like Megafiles),
not SCSI. they are probably very old.
locate the atari hard drive utilities, or uwe seimets HD Driver, and
start the boot program: ahdi.prg in atari's case. this should see
your hard disks.
run hdx.prg to install the boot sector so your disks will auto boot
(or you could just always boot from a floppy disk!)
good luck.bonne chance
ken

In article <7de5asekl1@snipp.uninett.no>, Jo Even Skarstein
<joska@nvg.ntnu.no> writes
>Dennis Vermeire is right, a TT is probably just as good as a PC when it
>comes to writing CD-Rs. Tonight my PC suddenly decided to f**k up it's own
>OS (NT4.0sp4), and *nothing* works anymore. It's only three weeks since
>the last time I had to do a full reinstall (it took me the entire
>weekend), and now I have to do it again.

It's nice NOT to be alone! I'm use to using a computer that you don't
have to re-install everything every other week. I think that's why you
have to keep up with the latest hardware. You just don't give it time to
crash, you upgrade before it does!

I would love to be able to use my pc a whole month WITHOUT having to
start from beginning again; and with Windoze '98 you HAVE to start from
the beginning, I'm glad I've got 2 hard drives; one to back up vital
info before a reformat has to happen:(

>
>Well, this is the last time. When I get it working again I'm going to sell
>it and buy a CD-R for my TT. I don't want to spend days working on some
>perverted machine's even more perverted OS just to be able to write CD-Rs
>in truecolour instead of the trusty TTs 16 colours... And with the money
>left over I'm going to buy a Palm III and have some fun :-)

My Portfolio is starting to look promising against my pc's;)

Why can't someone come up with an OS that's more stable, even the
Amoeba's is more stable than Windoze and that has a lot to be desired.

I reckon the pc's number, 120, 300, 400, 450 etc., means the number of
day before it has to be replaced before you commit hari-cari;)

>> 'no "unconventional" ways to allocate memory'
>
>That programs can only use Malloc() or Mxalloc() to allocate the memory

Hmmm try reading your original message.. you state explicitly that

"there are no "unconventional" ways to allocate memory"

This is far from true and your explanation proves you are limiting
your mind...

>Using the Malloc()/Mxalloc()/Mshrink()/Mfree() calls, which are standard
>GEMDOS memory related functions, is the "conventional" way

And what of programmers who don't use standard GEMDOS .. Are you now
going to move the goalposts ?

>and there are no other ways of getting system memory. That was what I
>meant.

Haa... my apologies..I was going by what you wrote.. not what you
meant?

You should not make sweeping statements .... We can only read your
writing.. not your mind :)

there has een one for years,but it is unreliable I used it as a sort of demo for a few weeks until I was happy that it was a program I was willing to spend a few hundred pounds on,after buying the legit version I can say it was the best few hundred pounds I ever spent,I still use it daily and wish there was a falcon or pc version,I have tried Logic but for what I do it's not as good as Notator

Hi Leute

Hab folgendes Anliegen:

Hab mir ein 08 / 15 - Keyboard mit Midi - Schnittstelle (in / out)
ausgeborgt und m�chte es an meinem PC (233 MMX, Win95, 64MB Ram, AWE64Gold)
betreiben. Nun habe ich folgendes Problem: Ich schaffe es nicht, am PC �ber
die Soundkarte irgendeinen Ton des Keyboards zu h�ren, geschweige denn
einzuspielen. Ich m�chte Midi - Daten ins "Cubasis AV" u.�. einspielen und
dort weiterbearbeiten. Nur habe ich dabei anscheinend irgendein Treiber- und
Installationsproblem, bei dem ich anstehe. Die Verkabelung pa�t 100%ig, nur
ich kann der Soundkarte keinen Ton entlocken. Nun meine Frage: Was mu� im
Punkt "Multimedia" in der Systemsteuerung alles installiert sein, da� ich
die Midi-Daten, die ich in den PC schicke, in Musik umsetze? Was mir
aufgefallen ist: Beim Mischpult (Play Control) ist der Punkt "Ton aus" bei
Midi deaktiviert. Vielleicht weis irgendwer eine L�sung f�r blutige Anf�nger
wie mich, denn ich hab (bis jetzt noch) absolut keinen Tau, wie ich das
machen kann. Weis wer Rat? Wenn geht, bitte Antwort an meine e-mail-adresse
klaxmax123@yahoo.com

Herzlichen Dank f�r die M�he,
Sascha

From: Andy Blakely <Andy.Blakely@pnl.gov>
Message-ID: <36FAC5C9.4E0F1308@pnl.gov>
Source record: 81968

The operating systems have nothing to do with repeat postings. The repeats are caused by the newsgroup programs themselves and/or the user's settings.

I use both IBM-compatible & Atari PCs. I've noticed that IBM's have a higher quantity of programs, but lower quality than Atari most of the time. I've always loved Atari computers... don't think I'll ever love an IBM compatible, even though I use it more often.

In a way, I'm an Atari newcomer. Being only 19 years old, I used to *only* play games when Atari ST's were popular. Now I've got me two Ataris, a 1mb STf and (my new toy) a 4mb STe with 170mb hard drive (I never had a hard drive before)!!! I'm a newcomer when it comes to programming, midi, etc.

Long live Atari!

Well, I guess this is confusing because in my mind, only the translation comes from System Solution (in your example) but the actual program is still an ASH product. I have to assume that ASH must be paid for every copy that SS sells. Yes? Definitely a strange, and difficult to understand policy.

>This subject is not closed yet!! I can go on for hours.... what it
>comes down to is that certain people just don't give a shit about the
>Atari community. "Lets take the money and run" seems to be their credo,

Source record: 81978

The Spectre will not work at all due to differences in the hardware spec
of the Falcon cart port vs the ST cart port. It has nothing to do with
the external floppy port. That served only to allow it to read Mac
disks. Spectre GCR without the floppy connector works as a Spectre 128.
Neither will work on the Falcon cart port.

Hallo Magnus!

MK>Why not make a RSC translator?

Somebody already had this idea. The below mentioned program is intended for
extracting texts from resource files in order to translate them and tomaintain
multilingual resources together with ResourceMaster RCS.

I didn't try it myself yet, but here is the announcement from
maus.computer.atari.news (translation appended):

From: Armin Diedering @ L2
Newsgroups: Maus.Computer.Atari.News
Subject: ResourceTextReplacer (RTR) 1.0
Maus-ID: A32853@L2
Message-ID: <199902132305.a32853@l2.maus.de>
Date: Sa, 13.02.99 23:05

Programmname: ResourceTextReplacer (RTR)

Version: 1.0

Datum: 11.02.1999

Typ: Programmier-Tool

Status: Shareware-Eingeschrï¿½nkt

Preis: 20 DM

Autor: Armin Diedering
Armin_Diedering@L2.maus.de
A.Diedering@t-online.de

Kurzbeschr.:

ResourceTextReplacer (RTR) v1.0 vom 11.2.1999
Es kï¿½nnen alle Texte einer Resource (Buttontexte usw.) in eine ASCII-Datei
exportiert werden. Selbstversï¿½ndlich kann RTR so eine Datei einlesen und
alle Texte einer Resource ersetzen.
RTR unterstï¿½tzt ResourceMaster-Multilayer-Resourcen (ab RSM v3.0)

Neuerungen:
alles - da erste ï¿½ffentliche Version

Download:
Internet:
http://home.t-online.de/home/A.Diedering/

Archiv(e):
rtr10 .lzh 142515 Bytes 1999-02-13 20:54:36 Uhr

Translation by Ekkehard:
------- start ----------

Program name: ResourceTextReplacer (RTR)

Version: 1.0

Date: 11.02.1999

Type: Programming tool

Status: Shareware restricted (means: key registration)

Price: 20 DM (10.23 EUR)

Author: Armin Diedering
Armin_Diedering@L2.maus.de
A.Diedering@t-online.de

Brief description:

ResourceTextReplacer (RTR) v1.0 from February 11, 1999
All texts from a resource (Button texts, ...) can be exported to a plain
ASCII File. Of course, RTR is also able to read such a text file and replace
all texts in a resource file.
RTR supports ResourceMaster-Multilayer-Resources (RSM v3.0 or newer)

>You don't say if your mailing list is to be in Dutch or English?

Ronald was missing talk in Dutch, so the list will be in Dutch from what he says. But, Dutch is a close cousin to English and German so it should be understandable to a large degree. Admittedly I have a slight advantage in knowing a little bit of Dutch, but IMO it's the easiest continental European language for English speakers to understand! ;-)

Anyway, we can always pressurize Mark Wherry to do a GEMTrade for Dutch!

:-)))

5211. TOS 2.06 for MEGA-ST?

Newsgroup: comp.sys.atari.st
Date: 1999-03-25 00:00:00 UTC
From: gokmase@my-dejanews.com
Message-ID: <7ddae8$8s0$1@nnrp1.dejanews.com>
Source record: 81995

Greetings all,

I wonder if TOS 2.06 can be used on a Mega-ST? I guess it should as the computer itself doesn't differ all that much from a standard ST. If it is possible, will upgrading to TOS2.06 only include changing chip, or is additional solering and stuff required?

Regards,

Joakim

>> can only get an update from System Solutions....
>
>That's not true... I did get updates from ASH with NVDI coming from SS

At the last Atari messe last october, I tried on the saturday and on
sunday to get it updated. ASH simply refused when they noticed, NVDI
came from SysSol. They did offer me a discount on the normal price, but
that is not what I call upgrading.... Lucky for me the brother B. who
wrote NVDI were there also, and they did not make any problems....
When I confronted ASH with this, they give me the quoted explanation,
and it a way it makes sense...
I gues you have just been lucky, I don't want to start a *YES-NO* game
here, if anyone is thinking of upgrading a ASH product, bought from
SysSol, at the Messe in Germany next month they'll remember what I wrote
here....

BTW: Have you ever tried it the other way around ? I did -((((

Cheers from Belgium
Dennis

PS: ROM makes no problems about updating Papyrus, but then you do get a
German version...and that is what this thread is all about, was is not?

5213. STING vs IConnect was Re: Telstar by Peter Rottengater (sp?)

Newsgroup: comp.sys.atari.st

From: Dennis Vermeire <dennis.vermeire@ping.be>
Message-ID: <922363050-783235AEicMi@ping.be>
Source record: 81997

Charles Silver <csilver@Puke.On.Spammers.com> wrote on 23-03-99:

Hi Charles,
>
>Ahhh, if IConnect is faster than STinG, then you don't have STinG setup
>properly.

What makes you so sure of this? Have you ever tried it out?
My STING setup is perfect-), opposed to when I first installed it I finetuned it, and it is about 20% faster now...
IConnect needs a fair bit of finetuning also, once they are both setup and tuned (every ISP needs different values), IConnect beats STING hands down.
Downloading files from a ftp server can be up to 40% faster, surfing the web can in certain cases be twice as fast (100%).
Have I gone complete nuts? others have claimed this before and you're the first one to doubt it...

Downloading a 1MB from the Belgium Ftp site:
With STING and aftp 1.5 : average speed 4400 cps, 4'13"
With IConnect and FiFi : average speed 5200 cps, 3'04"
The values that STING give are not bad at all, but when IConnect is tuned it flies... don't stare yourself blind at the figures, the biggest saving comes from the continuing flow of data. IConnect never stops while with STING its like *stop*go*stop*go* these stops are very short, but in the end add up....

Surfing to my ISP homepage:
With STING : average speed 5800 cps, 1'48"
With IConnect: average speed 7200 cps, 53"
I removed the website from the cache, not only is the speed difference significant, but once again STING has these annoying stops. Do the words "waiting for connection" sound familiar? With IConnect you do get these stops also, but they don't occur as often and they don't last as long.

Sending a 1MB email with attachment:
With STING and MYMail : average speed 1700 cps ,9'04"
With Iconnect and ASH Emailer: average speed 3500 cps, 5'17"
Perhaps this last example shows my point best of all, four minutes is a long time...

Peter Rottengatter himself agreed that STING is not optimised for speed, this will certainly change when the next version arrives. I'm not knocking STING here, I use it myself and I'm very glad I've got it, but that doesn't mean that one should spit one IConnect. Most of us don't use it, and when it get mentioned it's always in the crummy and buggy

combination with CAB.
Running with clients like FiFi, ASH Emailer and Teli IConnect can't be beaten on Atari, and I've seen figures which are a lot worser on other platforms also.

Optimising IConnect:
This depends on the ISP, so I'll just give general figures here, fine tuning it is trial and error-)

Activate ONLY PRO
DNS : Timeout 10, Query 6
Sockets : 1025 min, 7777 max, 32 backlog
PPP : 750ms retries, 8 max NAK
TCP : 2048 receive , 1500 window limiter
IP : 1650 trans Unit, 30 incoming queue

These are the "optimised" figures for a connection to PING (Belgium),with a 56K modem, V90 protocol.

Sometimes, not entering the proxyserver , speeds up things also dramatic, but this is also true for STING

Cheers from belgium
Dennis

Hi Joe

>I understand your frustration but Alexander is continuing to support
>the Atari platform.
What do you understand by continuing?

>If iCAB development helps secure a future for the Atari version I'm
>happy with that.
So would I and everybody else here, but the iCab Company has got nothing to do with our CAB. I fail to see how this is going to have any positive effects on the Atari CAB. All generated income will be invested in future MAC projects....

>Alexander told me recently there were 80,000 iCAB downloads of in less
>than a month, so it's no surprise his attention and efforts are
>elsewhere ATM!
This proves my point....
Development on iCAB started a year ago, around that time development on CAB was put on ice. According to you and the iCAB website a lot more work has to be done before iCAB is finalised. When iCAB starts shipping he'll be very busy ironing out bugs and programming the next version. So where and when is he going to find time for the Atari version, in the last fourteen months he didn't even look at it....
As long as CAB is on sale it would be very bad marketing to announce publicly that development is finished, I don't think ASH would be very pleased with this either.
Personaly I think CAB is history, if ever a new CAB written by Mr.Claus gets released, I'll be the first one to apologise here, until that day I stand by every single word I wrote....

Cheers from belgium
Dennis

Hey! "Joe Connor" <joe@inactive.SPAMBLOCK.cix.co.uk>
>

>I understand your frustration but Alexander is continuing to support the Atari platform.

In what way ?..(For the record I have asked for and recieved a favor
from Alexander in the past and he helped me for free.. I have no bones
to pick and he is one of the TOP people in ATARIs history as I and
most people know it).... But surely he has moved on ?

>OK so he's made iCAB - everyone has to make a living - and you can't do that solely in the Atari marketplace.

I personaly don't think anyone should be trying to make money out of
ATARIans full stop..Although I did buy CAB 2.5:(..This is a hobbyist
platform after all.. But then thats just my personal opinion.. We both
agree no one is going to get rich off our platform anymore.. Long gone
are the Jeff Minters blah blah

>If iCAB development helps secure a future for the Atari version I'm happy with that.

How do you relate the two ?

>Alexander told me recently there were 80,000 iCAB downloads of in less than a month, so it's no surprise his attention and efforts are elsewhere ATM!

Amount of downloads does not equal amount of users (unfortunatly)

> additional solering and stuff required?

It is possible, but it requires soldering. The procedure should be the
same as fitting 2.06 to any ST(F) as described somewhere in the Quick
FAQ. Only STEs can be upgraded to 2.06 without much soldering.

I have the following for sale. I prefer to sell the whole lot as a package.
However, I am willing to sell individual items but the ST must sell as a unit
and not as parts.
Here then for your viewing pleasure is a list of my ST stuff :) :
HARDWARE:
4mb 520ST with SC1224 color Monitor, SF314 Floppy Drive, mouse, joystick, Alpha
Data trackball, manual, System & language disks, and mouse cleaning ball.

GAMES:
GBA Championship Basketball The Sentry Populous
MetroCross Star Glider Conquest of Camelot

Guild of Thieves Star Ray Shadow of the
Beast II
Zork I AD&D Hillsfar Gold Runner II
Station Fall Golden Path Grid Iron
HitchHiker's Guide to the Galaxy The Black Cauldron Swiftar
Battleship Obitus Alcon
Pirates of the Barbary Coast Flight Simulator II

APPLICATIONS:
Habba Check Minder H&D Base Hippo Pixel
Hippo Fonts Cyber Sculpt Art & Film Director
Multi Desk Calamus Outline Art OutBurst 3.3
VIP Professional Flash That's Write
v.3.1G
Atari Logo

BOOKS/PUBLICATIONS:
ST Basic Source Book
A Source Book for Atari Logo
Falcon030, 14mb ram, 540mb hd, 17" svga monitor, MagiC, Pagestream, NVDI,
ExtedDos Pro, ICD HD utilities.

Well Magic Roundabout has to be the ultimate kids show, but with a
very adult meaning in it! The New Magic Roundabout narrated by Nigel
Planer of the Young Ones fame is even more adult - see my daughter
Nirvana's page on my web site for an explanation! :-)

>Another all-time favorite is the Muppet Show... (heck, I must be getting
>old!)

I never really got into the Muppet Show, but do you remember the film
Dark Crystal? The puppets in that film were made by the Muppet Show
people IIRC. A really nice film, I was about 20 when I saw it, and
took a 17 year old girlfriend to see it with me, and we both were
almost in tears - such a moving story really.

Not sure which programme we're talking about here, but IKWYM - my son happily watches cartoons in German on satellite TV and he seems to know what's going on to a large degree. Kids are just so much better at learning and absorbing new things. Kyle just sits here in front of the monitor and types his name on the keyboard just perfectly, he's only just three years old, so I'm quite impressed. I just wish I could learn new things so quickly!

Best of Luck. Maybe the subscribers to Hallvard Tangeraas' list can help. It is unfortunate that, when E-Magic brought out LOGIC for the Atari, their upgrade for Atari owners required the Notator SL dongle be returned in exchange for the LOG3 device.

What on earth were the E-magic people thinking at the time? Now there are situations all over the place, where some old .SON files exist, but there is no working copy of Notator in the area.

I WISH some hacker could cobble together a `cracked' copy of Notator that would run without that key. I already paid $600 for my Notator, so I have a right to ask. Flame away, those who have a need.

Open up the Falcon totally. Until you can remove the bottom plate
(screen)
See if there are no connections punched through the carton layer.

Check the plug. Sometimes he is not soldered ok and can make contact
with the metal shield.
Check the soldering connections of the 3 coils.
Put in audio and follow the signal to codec U48.
Is it still there? Also after passing trough analog chip (LMxx)?

Looka at some messages in this group Regularly there are updates from
FTP sites, new homepages , what is new for download where etc.

>Please tell me :-)
>
Multitos is from Atari so it is free. But buggy and slow.
Magic is OK but costs money and takes extra memory

There is somewhere a demo-version for download.

Hmm. Converted in what way? I'm currently using a Nemesized Falcon, running
MiNT/N.aes/Thing. I'm waiting to see if Titan delivers on the Tempest board.
A 266 mhz PowerPC equipped Falcon running MiNT is just too good not to wait
a while longer on. If they don't deliver, then I would seriously consider
going with the C2, which looks really good itself. ;-)

Hi Nick. There is an exception to that rule. The CodeHeads here in the US sold
a board that plugged into the Mega ST bus that required little or no soldering.
Unfortunately, I don't think they are in production anymore. If you can find
one used/in good shape, it might be the way to go. ;-)

> these browsers display the same Web pages.

Thank you for all your tips Charles ...
I have found a better solution but I had to rework the whole file to make it work as Netscape bookmark html ....
I imported both files in Everest and reworked Cab hotlist to make it run in Netscape ... I had a lot of replace and erase to do but Everest nicely did the job ....
It was important for me to do that because I have hundreds of urls listed in my old good Cab hotlist, but it's now done and I have them under Netscape.

Thank you very much indeed.

Yours

>into troubles.... in a case like Papyrus you could probably just add the
>"new"
>strings for each release and in 5 minutes you would have a translated new
>Papyrus
>RSC file for the latest release.

Translators like these already exist, and for doing simple RSC files they save a lot of work. The Papyrus RSC file is a different piece of cake, translating this monster and checking all the functions is a lot of work. The probem with Papyrus is ROM: they constantly make changes to the program and the RSC files. This is good cause they improve the program and add new features, but from the viewpoint of the guy who's translating the program this is a real pain, you're always a version behind.....
Example: I downloaded the demo of version 6.x, ordered the program and in the mean time started to translate the RSC file. When my copy arrived it was 6.15, the changes that took place in 6 weeks time were so big that I had to redo the whole thing. Two months later version 6.23 arrived, and yes, you guessed....once again a big operation.-)
Version 7.x is exactly the same story, so supposing one would translate the latest RSC file and put them on a website, you order a Papyrus from ROM and will find out that the translated RSC file do not work. I gues you will not be very happy with this.....
The only way that a recent RSC file can be offered is with coorporation from ROM itself, and for some reason they are deaf, blind and dumb.....

Cheers from Belgium
Dennis

PS: A RSC translator called TRT.1_0 by Arnold Diedering can be found at:
http://home.t-online.de/home/A.Diedering

James F Haslam wrote on 25-03-1999:

Hi James,

>What (Internet) clients are available for I-Connect? I'm mainly thinking
>email, FTP here, the basics.
IConnect has two clients: FiFi for ftp servers and Teli for Telnetservers.
There is a seperate program for email and newsgroups: ASH Emailer which is
driven by IConnect.

All this minimum needs CAB 2.6, so I'm afraid your friend will need to update
his CAB version. The PPP version that comes with CAB 2.5 can't handle these
clients.....

>does Newsie work under I-Connect, or does he have to use something else?
Newsie is a STING client, so he'll have to get ASH Emailer, this is the
only emailer and newsprogram that runs under IConnect.

>Email preferred if possible, file attach is welcome (UUE or MIME, not Base 64
>as Newsie doesn't seem to like it on my machine, btw).
I've posted this here because some other people might be intrested in this
also. A email is on the way....

Cheers from Belgium
Dennis

5241. Re: keyboard troubles

>>but by changing the keycaps, all should be OK
>>
>don't..they..use..the..international..letter..set?...not..just..the..
>normal (to..me..anyway)english/usa...key..set?

No, the German keyboards have a complete different layout, so one needs to switch the keycaps. Here in Belgium the situation was even more complicated, they used to sell English and French Atari's, the French Atari came with a French TOS and a French keyboard (AZERTY).
When I bought my TT, they had to order it because I wanted a English keyboard and not the French crap.....(Sorry Jo). Atari Belgium told me that the TT was a professional machine and that professionals only used the AZERTY keyboards. Its a bit like the ads for Marlboro : only real men smoke them-)
So I told them that I was not a professional and wanted a English TOS and a keyboard to go with it. It took them six weeks to deliver, I wrote them a letter that I was happy not being a professional, because otherwise I would have been bankrupt by the time the computer arrived....never got any reply.

Two months later Atari Belgium closed down, and I'm still around -)))

Cheers from Belgium
Dennis

>>your way around on a PC keyboard?
>
>Dennis,
>
>first of, my TT kbd is slowly degrading (bloody mylars).
Well, like I wrote in the posting a brandnew keyboard can be obtained for
39DM, I think this is a bargain....
At the last Atari Messe in Germany I bought three, did a bit of hassling and
got them for 30DM each -)))
Maybe its because I got used to that keyboard, but I still have to see a
keyboard on PC and MAC which is just as good.

If you're not going to the Messe, I can always bring one with me for you.

Cheers from Belgium
Dennis

Nicholas Bales <bales@directprovider.net> wrote on 23-03-99

Hi Nick,

>Wow, the ST is coming back in fashion. That's 3 newcomers today.
Yes, and although these people are newcomers they are able to post a message in this newsgroup in one go....

For this simple task Ken McDonalds Windows NT driven system needs three retries.......

Not to mention David Loughton Windows95 driven box, this one needs four.

I'm wondering how many postings a Win98 needs, before it thinks it has succesfully sends a message....

That's progress...

These are just a few of the simple things, that make me glad I'm a Atari User.

Cheers from Belgium
Dennis

5245. For Sale, Swap or PX: Atari to Philips 8833 Mark II

You are not a programmer, are you? If you were, you'd know that there
are no "unconventional" ways to allocate memory, especially for TOS
programs.

5251. Want to buy Atari 1040ST

Does anyone have an Atari 1040ST, or external disk drive for same, to sell?

I have some songs stranded in Atari KCS, and my 1040 stopped working.

If you have an Atari 1040ST for sale, please contact me at: cmorris@tapeless.com

That doasn't work well, have a look to pictures on my download site..
Perfectly. With two bracked legs only and enough space between floppy
CT2 and internal PSU. Flatcable as loop under the bracket.

Works fine since the first time i fit the first CT2

CAB 2.7
ASH FIFFI 1.1
ASH Emailer 2.0

They all needs MagiC, I-Connect and the .OVL what comes with the
package, doasn't work with Ackerman or Booklage .OVL !

I can't see the machine, but the package works fine as installed
from all the disk's. Watch out for PROXY configuration.

NewSIE needs STik or STinG with the STiK/STinG OVL !

Don't change the .OVLs !

> and tuned (every ISP needs different values), IConnect beats STING hands
> down.

Did you see my post re. this a couple of months ago? In my experience is
both MiNTnet, STiNG and IConnect equally fast over a modem, everything
(ftp, mail, http etc.) pushes my 33k6 modem to it's limit. Ditto with a
nullmodem-connection between my Falcon and TT except that IConnect won't
work with it. Perhaps there is a notable difference on very slow machines
(e.g. stock STs), but on both my TT and Falcon it's the physical link that
sets the limit, not the stacks.

> Running with clients like FiFi, ASH Emailer and Teli IConnect can't be
> beaten on Atari, and I've seen figures which are a lot worser on other

Erm... I have CAB 2.7 and Emailer on my TT running under MagiC6 and I can
testify that this setup is *not* superior to aMail and CAB under
N.AES/MiNT/MiNTnet performance-wise. In fact, when it comes to features
the IConnect-solution is definitely the worst I have. But I agree that
it's dead-easy to set up and maintain.

Dennis Vermeire is right, a TT is probably just as good as a PC when it comes to writing CD-Rs. Tonight my PC suddenly decided to f**k up it's own OS (NT4.0sp4), and *nothing* works anymore. It's only three weeks since the last time I had to do a full reinstall (it took me the entire weekend), and now I have to do it again.

Well, this is the last time. When I get it working again I'm going to sell it and buy a CD-R for my TT. I don't want to spend days working on some perverted machine's even more perverted OS just to be able to write CD-Rs in truecolour instead of the trusty TTs 16 colours... And with the money left over I'm going to buy a Palm III and have some fun :-)

Hello. The following is For Sale:

****** Hardware:
RISC PC w/ StrongARM, RO 3.7, 3.2GB HDD, 34MB RAM,
2MB VRAM, 486SX-33 PC Card, 12x CD-ROM. (600ukp)
Storm SCSI card for above (i.e. RISC PC only) (50ukp)
Atari 1040STe w/ hi-res monitor and
eMagic MIDI software. (70ukp)

****** Documenation + software:
Hugs box of non-RPC Acorn games (100ukp)
RISC OS 3 PRMs including vol. 5 (60ukp)
Acorn C/C++ dev. kit v5 (55ukp)
Archimedes Assembly Language (8ukp)
RISC OS 2 PRMs (5ukp)
huge collection of Acorn mags (free!)

****** Also:
Yamaha PSR-36 keyboard (50ukp)

Either pick up from Oxford, UK (until 11th April) or after that from
Cambridge, or pay postage. Sensible offers welcomed. For more detail on
all of these, including which bits I'll split, see:

http://www.soup-kitchen.demon.co.uk/personal/forsale.html

cheers,

Hi all!

At tonights Cheshunt Computer Club (a mainly Atari user group in the UK) a new member came through the door with a 4Mb Falcon and MagiC 5.11 and Cab 2.5 to be installed.

We installed MagiC for him ok, but due to time constraints we couldn't sort Cab for him. Cab and I-Connect shouldn't be a problem, its just I-Connect clients I'm not sure about (I use StiNG).

What (Internet) clients are available for I-Connect? I'm mainly thinking email, FTP here, the basics. For instance does Newsie work under I-Connect, or does he have to use something else?

He's currently a musician using Cubase Audio, but he now wants to get on the Net with the Demon UK ISP. Should he use the basic script for Demon supplied with I-Connect or has anyone got a better script?

Email preferred if possible, file attach is welcome (UUE or MIME, not Base 64 as Newsie doesn't seem to like it on my machine, btw).

Cheers!

James

Source record: 82113

Hi there,

>to freeze the computer when recording audio track with the harddrive
still
>spinning (LED ON).
>
>is it a driver problem?

Could be. Some versions of ICD locks up the SCSI bus completely when
this problem comes. HDDriver, AHDI and SCSI-tools handles the problem,
but the bus gets locked for anything between a couple of seconds and a
minute - but then, the bus resets all of the connected units and it's
possible to continue again. Important! Don't switch off and on any units
when the computer is running - I've seen many trashed Falcons after that
type of action :(
Could be a DRIVE problem too... Some HD's make thermal calibration even
though they are reading, which makes the transfer rate drop to next to
nothing during a few seconds. This may cause similar problems.

>termination?

Termination can be a problem in many cases...

>CAF bug?

Not likely - it's only that these problems appear mostly with CAF. There
actually aren't many programs around which use the computer to the limit
like CAF does...

>RAM problem?
>SIze of partition on which it is recording?

If you can record at all, it should be ok - otherwise you'd get an error
message directly when you try to start the recording.

>Size of logical sectors on this partition?

This is related to the previous question...

>The BUS being too stressed?

That's probably the case. There is a well-known hardware problem with
the Falcon and it mostly shows in CAF or when you have a color mode (256
colors) and try to copy large amounts of data between two partitions. I
would suspect that this is the problem. You can probably solve it (or at
least, make it work better) by making one of the CPU clock modifications
you can find in the troubleshooting section of my homepage, since it's
due to the CPU clock pulses not being clean enough for the system to run

stable in all cases.

>Btw, what is a real method to know if the drives are terminated
correctly?

The one and only method of terminating a SCSI chain correctly is like
this:
The first and the last unit on the cable (regardless of which SCSI ID
they have) should always be terminated - and none of the others!
Normally, the SCSI controller is the first unit in the chain - so since
the first unit is the Falcon itself (which is terminated internally),
you should only have a termination plug on the last unit on the cable.
If you still have problems - try an active terminator instead of a
passive one. Don't try any other termination schemes even though people
claim many other setups work. This is the way SCSI is supposed to work
according to specs. If you have a problem knowing which external units
are or aren't terminated, remove all terminations on the drives,
CD-ROM's, CD-writers etc and use an external end-plug terminator. That
way you can't go wrong since you'll only be able to plug the termination
in on the correct unit...

If you still have problems, don't hesitate to contact me and I'll try to
help you out.
Check out other hints about CAF and the Falcon on my site...

Best regards,
Claes

Well here is some news for MagiC people, as I havnt updated my page..
A new version of the Jinnee 2 demo is available, now version 2.01 (download
from www.mani.de) This is very nice and totally whips the finder and
Windows98 desktop (ofcourse)
Apparently the driver to be able to a use Wheel Mice under MagiC PC by
Holger Weets is now been in beta, and should ship with MagiCPC6.1...
And finally, jinnee 2, Scripter 1.1, HDDriver 7.7 can be downloaded out of
the ASH mailbox for registered users.

>
>I did this back in November or so when it appeared that Papyrus was
>"close" to release. What do you think, should I do it again? :)

NO, unless you've got a lot of time to waist.....
ROM constantly updates Papyrus, the RSC file from the latest Papyrus has undergone a lot of changes compared to the demo version. So, if you like to translate the RSC files, you got to get hold of the latest version.

R.O.M is releasing three new programs; Papyrus Word, Papyrus Office and Papyrus Base. This means, that the RSC files will change once again... One can say that R.O.M make significant changes to the RSC files every three months, this means that you'll be translating Papyrus RSC files for the rest of your life....

A complex program like Papyrus needs more then translated RSC files, the average user will need a decent manual, and a online HYP or Bubblehelp would also be appreciated I think.

>If you believe the ROM page, the problem is *not* with the program
>itself but with the online help pages.
The online help pages are just a HYP file. There are enough people willing to translate these, in fact people have already offered to....
The problem is *not* the program or the online help, the problem is R.O.M.... like most of the German softwarehouses/distributors they do not care about their foreign userbase, the sooner we all realise this the better....

We don't have to bombard ROM or ASH with emails, nothing is going to change.... when we want a English Papyrus its System Solutions that needs to be addressed. They are the distributors, sold Papyrus 5.x and produced the manual. Legally it is not ROM but System Solutions which has to give support.....
Why don't they distribute a new version? maybe version 5.x didn't do very well, perhaps ROM wants to much money... there could be several reasons, but if you want a English Papyrus it will have to come from them.....

Going a little of topic-):
Systems Solutions is also the distributor for the ASH product line, and except for CAB and MagiC, they ignore almost all the other software... A database like PHOENIX 5.0 would be a instant succes, and SIGNUM 4.5 is simply the BEST wordprocessor available on the Atari platform. The people that run System Solutions are not idiots, so they must have some very good reasons not to translate/distribute this software.

Did You know:
When you have a CAB, MagiC, NVDI etc distributed by System Solutions, ASH refuses to update these, because it doesn't come from them...you can only get an update from System Solutions....what if they don't provide a update? or decide not to distribute the program anymore ? well, that's what is being called "bad luck".

What can we do?
As individuals there's not much we can do except complain
or...
Instead of buying the software from a distributor obtain it straight from the German softwarehouse, some people are willing and able to translate the RSC files to English, give it some time, and someone will start translating the manuals & online help.
The big advantage is that we actually can DEMAND support from the German softwarehouse, support is a LEGAL right. I also think that their sales will go up... In Holland & Belgium nearly everyone is using a ILLEGAL Papyrus without knowing it. ACN is a master at this game....

Cheers from Belgium
Dennis

PS: This subject is not closed yet!! I can go on for hours.... what it comes down to is that certain people just don't give a shit about the Atari community. "Lets take the money and run" seems to be their credo, it's time we start kicking them in their *****

Raymond:

How does TOSBOX work on MIDI stuff? That would be a good Q, then
you could bring your midi stuff to a gig. The only problem I see
is the midi timing which is soooo good on a "real" TOS BOX!!

I have a 486 that my wife got me for 20.00! so it might be worth
turning THAT into an Atari!

I understand your frustration but Alexander is continuing to support the Atari platform.
OK so he's made iCAB - everyone has to make a living - and you can't do that solely in the Atari marketplace.
If iCAB development helps secure a future for the Atari version I'm happy with that.
Alexander told me recently there were 80,000 iCAB downloads of in less than a month, so it's no surprise his attention and efforts are elsewhere ATM!

Hi everyone,

I've resisted the delights of reading newsgroups for many years but I might as well use this PC for something apart from running MagiC PC, TOSBOX, Gemulator, STemulator and any other Atari related tasks I can think of!

So here's your chance to dish the dirt on Atari Computing and InterActive.

I'll also be in Neuss on April 10th/11th and in Stafford on Sunday April 18th if you'd like to chat in person!

Regards

Joe Connor

Hi Tim:

I have no idea how the MIDI works but so far every single program
I have try to run runs just great. Funy, I got my Toshiba 486 for $20.00
also :) Some one lent me a not so fast pentium and boy that Tosbox is
really really working smooth, but make sure to use FVDI or NVDI.

> for the rest of your life....

That gives an idea. Why not make a RSC translator? It should be much esier to translate a RSC file than a text file. I would guess that 75% could be translated without to much troubles by a program just replacing the "usual" RSC strings. After all, you often make a program to use a semi standard vocabulary. You must ofcourse keep an eye on string lengths or you might get into troubles.... in a case like Papyrus you could probably just add the "new" strings for each release and in 5 minutes you would have a translated new Papyrus RSC file for the latest release.

That's very interesting - System Solutions thought that I was mad when I
told them of the problem! Anyhow, the proof of the pudding...

> BTW, how does that C2 perform? <smile>

It's very nice! :-))

I haven't looked at all my progs yet, but I have yet to find any problems
(there is an issue with MagiC requiring the 3-fingered salute to continue
booting after it's installed the magic.ram file, and the shutdown prog won't
create a warm or cold boot) with it at all!

256 colour mode is usable at last, but I still prefer 2 colour mode for
comms work (at 800*608). I can't get CENTScreen to work so am still using
Videlity, but I'm willing to believe that that is down to me as I had similar
problems when first faced with Videlity! :-))

Are you one of the converted? ;-))

I am a BBS user here in the UK - I haven't seen any messages in FidoNet for some considerable time now - Turbonet has been very quiet for some time, and now NeST seems to have joined in.

I don't necessarily think that it's because no-one is posting messages, possibly more due to broken links.

You don't say if your mailing list is to be in Dutch or English?

Does sound like the infamous SCSI bus problem - but you've got a CT2 in that
Falcon?

>Btw, what is a real method to know if the drives are terminated correctly?
>I have tried many things, many of the config react the same.

The usual method is to copy a variety of files, both small and large, to
another partition and then to use Treechk.prg from the Kobold package to
check that source and destination files are identical.

Centek themselves have - or had - a SCSI checking utility on their web site
a few months ago.

Mail me if you need a copy.

>
> I tried gemulator Win 3.11 and was about 1/2 the speed of Tosbox
> may be Gemulator 98 would be fast but hate to have to use Win for that :(

Strange. On my PII it's very fast indeed and it does also support 030 and
040 emulation as well as debugging. TOSBox on the other hand were much slower.

BTW. Is there a review somewhere, comparing all these emulators and trying out
the most common used applications/OS? So far I have tried TOSbox, Gemulator
MagiCPC, Winston, STEmulator and Pacifist and they all have there advantages and
disadvantages. STEmulator were not bad at all, but wasn't very compatible.
Gemulator has some limited screen modes, but besides that it's realy fast and
compatible. TOS2WIN could I not get to work at all. MagiCPC is way to expensive
if you ask me and the rest just didn't do what I would like them to. I don't
care about games. What I want is a fast emulator to run GEM apps on and
preferably MagiC or MiNT. So far the only emulators to handle MagiC are Gemulator
and ofcourse MagiCPC.

You need a program that switches beteen 50 or 60Hz. There are several ones available from most FTP sites. These are usually small programs that you stick into an AUTO folder on your boot disk. Bootsie (also available on most FTPs) even writes such a program to a floppy disk's boot sector. Using programs like these with autobooting games is rather hazardous though.

5290. Re: Ultimate Ripper

Newsgroup: comp.sys.atari.st
Date: 1999-03-25 00:00:00 UTC
From: Steve Stupple <Steve@steverosie.demon.co.uk>
Message-ID: <JZi05qAMLg+2EwxI@steverosie.demon.co.uk>
Source record: 82140

In article <N2jK2.937$004.1575@news.flash.net>, Bubba in Big "D"
<dlord@flash.nospam.net> writes
>Does anybody remember a product called "The Ultimate Ripper"?
>I just found mine while rummaging thru some old boxes in my office.
>No manual yet, What's the switch on the side of the Rom pack for??
>

The switch is for switching it on.

Run a program with the switch OFF, hold in the RESET button and switch
the cartridge on and press F1 or F2.

There are some features of this cartridge that Power Computing doesn't
even know about, lets face it they couldn't care less.

They produced a cartridge called Supermon, this was doubled up with the
Ultimate Ripper. Unfortunately the ripper part of the cartridge is bug
ridden to hell. They say that it can't be helped!!!! due to the
electrical characteristics of the cartridge!!!

What a load of rubbish, and I CAN prove it can easily be done.

I had a long chat with Power Computing a few years ago, OK when the
Ripper first came out, about the missing 'A' (press 'Q') in the ring
interrupt routines along with a few things I found in the cartridge
(ripper).

They were not interested in it at all. When Supermon was teamed up with
it, I bought it as soon as I found out about it, the manual wasn't even
available at that time; wow! a monitor with lots of useful utilities
built in and only taking up very little memory.

After I found that the Ripper section wasn't working very well,
especially in the Disk Ripper section (no change in track display to
name just one), I rung them up.

They said that I could do anything I wanted with the Ultimate Ripper,
regarding examining the code and experimenting with it as they weren't
bothered about it. I went to trading standards, as the wouldn't refund
my money they were trying to charge me for sending it back!! The trading
standards officer said it wasn't worth going to Power Computing's
premises because it would cost more than the items was worth!

I did get the cost of the cartridge back though!

If this was an isolated incident I wouldn't mind, but it wasn't. Power
Computing is rated very badly (steer away unless desperate) section, in
my opinion!

doubt that....

> If iCAB development helps secure a future for the Atari version I'm happy with that.

How could it? Mac users won't start buying old Atari hardware or even
switch to MagicMac just because they hear iCAB started on Atari?!!!

> Alexander told me recently there were 80,000 iCAB downloads of in less than a month,
> so it's no surprise his attention and efforts are elsewhere ATM!

I submit that, if ASH charged a reasonable price for the upgrades or even
provided them for free to registered users, instead of charging the price
of a brand-new program every time, people would be more inclined to
purchase CAB and persue the Atari life further....

Let's be blunt about this: there's no money to be made in extortion!
People aren't so dumb as ASH thinks; when they realise they've been had,
they curse on the current state of the Atari platform and move on...

5293. New Calamus page

Newsgroup: comp.sys.atari.st
Date: 1999-03-25 00:00:00 UTC
From: curis@capitole.lure.u-psud.fr
Message-ID: <slrn7fk65i.rpn.curis@capitole.lure.u-psud.fr>
Source record: 82143

Hello,

Thank's to Didier Briel, who translated them in english, I can
announce the availability of two Calamus pages on my website. One dealt with
know errors of Calamus : how to avoid them, how to correct themï¿½; the second
one gives some hints for paging mathematics with Calamus (oriented toward the
French typographic traditions...).

You can read them at :

http://www.eleves.ens.fr:8080/~curis/Calamus/sommaire.uk.html

All opinions, suggestions and further informations are welcome.

CAB can import Navigator and IE bookmarks since.... 2.5 I think.
I regularly do that, after I find new sites from my workplace's Netscape.

On Wed, 24 Mar 1999, Jo Vandeweghe wrote:

So far every program I have ried works..I even loaded a 40 pages doc into PageStream and worked great. I am connected right now using Stalker and Lynx on my server..Tosbox connects fine but when I use Stik Atarirc would not work. Anyone tried this under Tosbox?

As I said, all other applications run stable and fine..I even made a setup that loads from floppy Tosbox and Geneva and Nvdi :)

Raymond

I like having it in a disk so I can use it anywhere I go :)

>A *very* good idea is to dye the plastic instead of painting it, this is
>much more durable.

I beg to differ, Dupont Lucite Automotive interior paint (idon't know if it is available as a commercial product, i think it is professional use only, haven't really checked for sure) is the best choice as it is designed for painting plastic parts such as ALL automotive interior trim and panel pieces, very durable, it contains vinyl resins and can be either in a flat finish or a semi-gloss to a gloss. I opted to get a color match of the original plastic of my ST's(5) and mice(they seem to yellow over the years so i color matched to the computers unexposed inside) and painted the one i use to make it look brand new. I auto paint for a living and have access to such convienences as color matching and of course the proper equipment for the application of such coatings for near perfect results. The original look looks the best to me.

I'm an extremely lucky man I guess. Me too ordered the SL upgrade. I took
almost a year before I finally got in june 1998 my SL 98 upgrade.
Unfortunately the version he has send me (from MGI) was too different from
the one which Invers Media delivers.
I found this out when I ordered through Invers media the August release.
Instead of the usual 30 DM,- for the freshup I got to pay 299 DM,-.
Luckely for me Ulf Dunkel is a reasonable man so after a short e-mail
discussion I only had to pay 149 DM,-

No doubt answered enough times - the 65XE was essentially an 800XL in a new casing, with a smaller parallel bus and a mushy keyboard. Oh, and a "Revision C" Atari BASIC in its ROM which quashed a couple severe bugs but added a couple of its own. And a stupid place to insert cartridges (on the backside of the computer. Duh!)

Trust me, I owned one of these things way back when...

Do you perchance have your HD driver floppy? What probably has happened is that your C: drive's boot sector got corrupted. Try putting in a floppy with that driver in its AUTO folder. I've had this happen on many occasions throughout my tenure running various STs with even more various hard drives. Once you got that done, run the utility program to restore the boot sector, and everybody's happy again. I was always happiest using ICD's fine suite of HD programs (of course, then again, I lived and swore by ICD host adaptors as well - the AdSCSI+ ruled, even IF I went through three of them in my time.)

> have read SP4 is very bug ridden. SP3 is much more stable.

Oh, I have been through four reinstalls with sp3 as well, so I don't think that's the *real* problem ;-) Anyway, even though my Ataris have OS-problems from time to time as well it's usually just a matter of up- or downgrading the OS itself instead of having to zero the entire system-disk, spend a day reinstalling the OS and it's various patches (it takes about 10 zillion reboots), another day reinstalling the apps and a third day trying to figure out why it still doesn't work.

I have never truly hated anything or anyone in my life, but now I hate my PC. When my Atari-OS' starts giving me the same troubles (it will as soon as 'wizards' starts to appear and config-files gets obfuscated) I'll probably go back to 8-bits...

Sorry, wrong again!

After a good nites sleep, I figured it all out:

The first one is an encrypted message from Moscow to Washington and reads
as follows: "Hi Bill, please don't pay attention to the rubbish I'm
yelling on the telly. Let me know ASAP when you're finished in the
bathroom; I'd like to come over once more to lick your ass again. Regards,
Boris"

Now the second one is an encrypted message too, this time from Washington
to Moscow. Since the encryption is a totally different one and the real
contents is different too, by sheer coincidence the message LOOKS exactly
the same. It says however:
"Sorry Boris, I've got one Lewinsky on the payrole for that already. CU
later at the Kremlin. Keep up the good shows. Bill"

Next we have the third one: another one from the Kremlin to the White
House, and encrypted in yet another code, and once again by sheer
coincidence it looks the same again. It is however a broadcast in
Cyrillian and goes something like: "Shbrenichnoshzturm.... @!**!!!"

Hope the mystery's solved now :-)

exactly, the ct2 comes with a module to patch this sdma prob.

This is not a harddisk driver. (I use hddriver latest). and tried with
other drivers, (same result).

>
> >Btw, what is a real method to know if the drives are terminated correctly?

They are identical, and all the sdmatest.prg, scsitest.prg etc report no
problem.

Yep his problem was due to a corrupted XControl inf file which prevented the
Falcon fron booting. With just a couple of minutes remaining until the end
of the meeting Steve had MagiC up and running.

>What (Internet) clients are available for I-Connect? I'm mainly thinking email,
>FTP here, the basics. For instance does Newsie work under I-Connect, or does he
>have to use something else?

No STinG clients will work with IConnect, tho' as Dennis has pointed out
it's possible to have both it and STinG loaded at the same time. Then STinG
and IConnect clients can be run in the same session, EXCEPT that you have to
make the connection with the appropriate dialer!

Clients for IConnect are Fiffi (ftp, included on the CAB2.7 master disk),
Teli (Telnet, shareware), and Emailer (newsgroups and email, commercial).

Hi guys,

STOP making a fool of Joe Connor:

Yesterday, when I saw the first "quoted posting" I wondered why these were
not on my newsserver... I know Joe posted three messages, to which me, Tony
greenwood and Martin Eric Racine replied.

This is one of the three postings:

>From: "Joe Connor" <joe@inactive.SPAMBLOCK.cix.co.uk>
>Date: Thu, 25 Mar 1999 06:17:36 -0000
>
>
>Martin-Eric Racine wrote in message ...

Well, _I_ am not ROTFL. MIME-encoded messages, v-cards and other
bullshit like that has no place over newsgroups. Plain text, in
straight 8-bit us-ascii or iso-8859 character-set, is all we need.

5321. FS: Falcon System in the UK

Newsgroup: comp.sys.atari.st
Date: 1999-03-26 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@syn.beetee.co-uk>
Message-ID: <36FB81D7.2E46FA6E@syn.beetee.co-uk>
Source record: 81913

Hello,

I have a complete Atari Falcon 030 system for sale for 350gbp.

This does not include shipping - I would prefer a buyer to
collect so that they can assure themselves that everything
is working before taking it away - I live in Newcastle upon Tyne.

See below for a complete description. Any questions, feel free to
email me.

Michael
--
To send me an email substitute @ for % in this address:
michael.clemmetsen%syntegra.bt.co.uk

------------------ cut here ------------------
** Falcon System **
4MB RAM, no internal IDE
External 520MB SCSI drive and Falcon SCSI to 50w SCSI connector.
Loaded and configured with the software listed below as well as
loads of freeware, shareware and demos mainly downloaded from the
internet.
(Seagate mechanism - ST3655N, including technical
documentation.
The drive is internally terminated so you do not need a
terminator, but will have to put it at the end of the SCSI
chain if you use any other devices.)
ClockPatch fitted (by System Solutions)
(Required for accurate Direct to Disk recording)
TT Keys fitted
(High quality replacement keyboard contact cups that
improve the keyboard feel -you'll definitely notice
the difference if you are a touch typist)
Falcon VDU port to VGA adapter cable
(required to connect to a SVGA or VGA monitor)
BlowUp Hard II
(Hardware attachment that plugs into the cartridge port
providing a faster horizontal sync, thereby allowing
higher resolutions on suitable monitors, i.e. those
that can take a variable horizontal synch signal up to
50KHz. Includes software drivers and manual. The software
can be used without the hardware if the monitor is
unsuitable, i.e. lower refresh rates have to be used.)
2 Mice
(Not Atari, i.e. better microswitched devices)

Tabby graphics tablet
(Approximately A5 size, including software drivers and manual)

SVGA Monitor
(Includes Polarising screen filter. Works well with the BlowUp
software, providing resolutions around 800x520,
depending on colour depth.)

Epson LQ100 24pin dot-matrix printer including Manual

** Commercial Software **
All are english language versions and are complete with
original disks and manuals.
* System
HD Driver 6
(Hard disk driver including format and setup)
NVDI 4.02
(Display accelerator and TrueType and Speedo Font
display and printing.
Including over 40 high quality Truetype fonts.)
Magic 5.13
(Pre-emptive multi-tasking operating system,
including support for Windows compatible
long file names)
Kobold 2.5
(Fast file copier and file management tool)
Geneva 006
(Co-operative multi-tasking operating system)
NeoDesk 4 005
(Replacement Desktop integrates seamlessly
with Geneva but also works with Magic)
NeoDesk CLI 2
(Command line interface that integrates with NeoDesk)

* Productivity
Papyrus 5.15
(The best word processor/pagelayout application
on the Atari platform. Includes features, such as
discontinuous selection not available in MS Word.
Can import and export to MS Word)
Calamus S
(Premier DTP app.)
Twist 2
(Relational Database)
Apex Media
(Falcon only graphics and animation app.)

* Programming
Lattice C 5.52
(Professional C compiler that can target all 680x0
processors. Comes with libraries and documentation for
creating fully compliant GEM programs.)
HiSoft C

(C interpreter. May not work on the Falcon, but useful
for its GEM library which could be used with Lattice)

* Games
The Killing Cloud
(3D point of view strategy/flight sim/shootemup in
21st Century Los Angeles.
May work on the Falcon using one of the ST
compatability programs e.g. Backwards)
Epic
(3D point of view strategy/flight sim/shootemup in
space and on distant planets.
May work on the Falcon using one of the ST
compatability programs e.g. Backwards)
Frontier - Elite II
(This works fine on the Falcon and can run from the
hard disk)

** Books & Manuals & Magazines **
Falcon System Manual
CalApp User Guide
(Calendar and Appointment Software supplied with Falcon)

The Atari Compendium by Scott Sanders (2 volumes)
Modern Atari System Software (HiSoft)
(Both these books are essential for any serious
Atari software development as they document all
the system calls and style guidelines for all
released versions of the TOS operating system.
As far as I know none of them are published anymore

Atari World - issues 1 to 11 inclusive

** Other **
Box of floppy disks with a variety of public domain, freeware
and shareware software, e.g. MiNT and a bunch of MiNT related
tools and utilities.

A few cables that may be of use.

Hello Magnus,

mk> If you want a realy speedy ST emulator for the PC, try Gemulator. It's
AFAIR I tried it since Gemulator 3.02 (yes, I have the appropiate ROM card

:-)) and looked regularly after the demo versions for Windows, but haven't

installed the Gemulator 98 demo yet.

mk> very fast indeed. Way faster than MagiCPC, actually it's damned fast!
Oh, is Gemulator 98 faster than the former versions? I didn't know because
I
didn't care about the Gemulator that often. :-o Do you know how much
faster
it is?

Unless older versions of MagiC PC and Gemulator for Windows were similar
in
speed, it would be interesting to compare the actual Gemulator with the
new
MagiC PC (2-3 times as fast as version 6.0).

Greetings, Oliver

We are Microsoft - Resistance is futile!

I've had a similar problem. it's a well known SCSI prob. it's very
frequent when using Videl Inside, screenblaster (video extenser) with
display bigger than 640x480 and using 256 colors or more. On my Falcon I
try using only 16 colors.
There is a possibility to make hardware modifications to solve the
problem. I know centek in France does it (http://www.centek.fr)

>

I've got one hooked up to my TT/030 right now and I'm not using
any print driver withit at all. I do most of my printing with it,
so far I'veshoved at lest 5 rems of paper through it and I picked
it up for $8.00 at a yard sale last year. Mine came with the
system disk, so auser can access the control panel, only Idon't
have a windoz box to run the software. Sofar, imagecopy works ok
with it when I dump something to it. It just uses the normal
printer port justlike any old DMP would.

Does yours have just the .5meg of ram or the added board for 1
meg?

Don't forget QNX. It is small, fast and deadly (though expensive). Try downloading a demo from www.qnx.com; demo fits on a single 3.5" HD flopy disk and works on at least an i386 with 8MB RAM. The PC has to be booted from that floppy and then it apparently installs a RAM disk. On it there will be a QNX kernel, Photon GUI (somewhat spartan, but logical), a file browser (a limited file-manager), some Internet software including a completely functional WEB browser (!), I think it is limited to 10 minutes of use, and some demo programs. QNX is a real-time multitasking multiuser OS, Unix-like but not Unix, with a kernel about 40 KB large (!) , and with almost infinite networking possibilities: any interface that transfers data between computers you can be used make a net with QNX computers. For example, some nice tour-de-force-s are possible, like dragging a window, by mouse, from a monitor on one computer to a monitor on another computer in the net (Photon supports a 32768x32768 pixels virtual display, and not all of it must be on the same computer).

As far as I know, QNX is certified for use in life-support equipment. Main programming language is C++, the Watcom compiler being a de-facto standard. There is a visual-basic-like Application-builder (for C++) and besides, most of Unix source code can be adjusted for QNX.

5326. Re MegaST goodies to go.

Newsgroup: comp.sys.atari.st

Source record: 81918

Following my last posting, the items have gone, leaving me with a MegaST casing, the flat block type. If any one is interested, its yours for a tenner + pp, UK only. Its very useful for housing CD ROM's, second floppy drives, HDs etc and you can put your monitor/coffee cup on it.

Still trying to sell my flat-bed scanner/copier, couples to printer port and scans straight into MegaPaint Pro, Calamus, for ï¿½60 +pp (heavy).

Bob King.

> straight 8-bit us-ascii or iso-8859 character-set, is all we need.

Well, text in ISO-8859-x has already to be in MIME-format to ensure it's
properly transported over gateways, i.e. it needs at least a proper
Content-Type-header.

Note that MIME does not automatically imply base64-encoding, which was
used for Joe's postings, as it contained CRLF line endings. I even think
it wasn't Joe's fault at all, but some nntp-server (or his newsreader)
decided that text with CRLF in it is binary data which has to be
base64-encoded.

Ciao

Thomas

No, you're not the only one. I just wonder how it comes why all the others
didn't notice it was a Base64 message. Every decent Atari newsreader can
handle this nowadays.
However this isn't the place to put Mime decoded or whatever messages. Just
plain text.

>Dear ST users and enthusiasts...
>
>This is a quick announcement regarding the recent reopening of the Atari
>Central website and message forums. The once general Atari board has
>been renamed the ST+ board and contains thousands of searchable posts,

Ho dear....
Why ST+ ?

Maybe because it is the name of the publication that is the current
holder of the title

"Best ATARI paper based magazine "

As voted for by the Atari community..

Or maybe because we are known worldwide due to having outlets in all
major countries..

Or maybe the name rang a bell because the mag is released EVERY month
of EVERY year without fail..

Or maybe the fact that ST+ has been available to the ATARI community
for FOUR years now in some form of readable magazine.. every month for
four years is some going..

Or maybe ATARI central haven't even heard of us ? (Thus making a
mockery of the name ATARI Central IMHO)

I would appreciate you take a look at the url in the sig and we would
also appreciate you not using the title ST+. Your co-operation would
be much appreciated and we at ST+ wish your new/re-opened board the
best of possible luck....:)

ST+Fanzine "Best ATARI Paper based magazine of 1998"

You can use gemulator explorer from www.emulators.com. I was able to use it sucessfully with my syquest hooked up to the scsi port on my Intel PC. I was able to move all my ST files from the syquest 44meg disks to my harddrive.

Is it possible to do a software patch that will allow the Falcons
cartridge port to emulate a ST cartridge port?
Something like what Backwards did to allow ST games and Apps. to run
on the Falcon. Or is the Falcons cart port so different that this
can't be done with software only?

5340. FS: GoldenImage Hand Scanner

Newsgroup: comp.sys.atari.st
Date: 1999-03-26 00:00:00 UTC
From: phantomm@kih.net
Message-ID: <7dgln1$1j92@news.ajou.ac.kr>
Source record: 81932

I have For Sale a GoldenImage Hand Scanner which works on
the Atari ST/STE and Mega computers. I have used it on a
4 meg Atari STE Tos 1.62 with great results.

The package includes:
Golden Image Hand Scanner
Cartridge Port Interface
AC Power Adapter
TouchUp version 2.52 Software and Manuals
Scan & Save ACC. Software

Everything is in very good conditon and comes
in the original box.
The Scanner works on Color and MonoChrome monitors.
You need at least 1 meg of memory. The software
will take advantage of more memory if you have it.
I know 4 megs works great with it. ;)
Also the Touchup software is Falcon Compatible.
However, The Scanner will not work on the Falcon
due to incompatibilities with the cartridge port.
MiGraph was suppose to produce a cart adapter
for the Falcon to fix this. Not sure if it was
ever done.
This Hand Scanner supports 100/200/300/400 DPI.
It will produce great looking GreyScale pictures,
As well as super Image pictures. Its very good
for DTP work and the TouchUp Software will export
your scans out to a number of formats such as
IMG, .GIF, .TIF, .IFF, and etc. And has lots of
great editing features.

Price is $65.00 plus shipping.
For Sale in North America only.
If interested contact me at....

No I do not think.
About 80 percent of the traffic for the Dutch langauge Atari area was
through 1 BBS in Rotterdam. All Atari users where member there (BIG
collection of software). So it defeintely is not in this case
a'broken link' question.

Martin-Eric Racine wrote:

> PC hardware is not _that_ bad, when you avoid Billgatesishness.

I can imagine that a clumsy instruction set and clumsy interfaces
leads to bigger binaries. Up to 5 times bigger I will accept as
unavoidable.

But a 50 or 100 fold can only be due to brain dead professional
software engineering standards.

It is not only M$, how big is netscape?
Programming is never ever considered a true profession, for which
craftmanship has to be acquired through learning and excersize.

It is not payed very well. If you are good, and want to earn more
money, you will promote until you do not program anymore.

The avarage generation of programmers is about 3 years.
Only the very bad stay longer.
And the new ones do not get time to learn from the past or learn
from themselves.

There is no tradition or written experience as in real handworking.

Henk.

5345. TUNESMITH

Newsgroup: comp.sys.atari.st
Date: 1999-03-26 00:00:00 UTC
From: tconrardy@hotmail.com
Message-ID: <7dgs1s$e1g$1@nnrp1.dejanews.com>
Source record: 81937

Hello All:

Just got Dr T's TUNESMITH by Jim Johnson for my birthday.

Just a little story on that: My wife ordered it from B&C Computer Visions. They used to be here in Sant Clara , CA, (USA)but moved to El Dorado. But they were coming up to remodel thier house in Santa Clara over the weekend, so they told her they would bring it up with them. Now THATS SERVICE! Bruce and Kathy are Great people! I used to go into thier store and Rap Midi stuff with Bruce.By the way...Tunesmith was only $30.00!

Any body used Tunesmith? Now that is an Amazing program! That is what I like about Atari, I can run these algorithmic programs that you can't find Anywhere else for any platform.

For those who do not know(quoting from the manuel) Tunesmith is a program for generating Musical themes and variations. Themes may be played using hundreds of different scales, and an accompaniment generator allows the creation of an infinite number of accompaniments based on these themes. Themes can be linked to form a complete song.

Now Thats Powerful!

Comments?...or is this too esoteric?

Tim Conrardy
TT030/ Mega Ste

Tell me about it!

I am still owed around 110 UKP and the worst part is Companies House
have told me that Image Applications ceased to exist during December
last year!

I've been advised that I could pursue it (and have a good case)
through the small claims court however winning the case is one item,
actually getting compensation paid is another!!! I would most likely
end up out of pocket (and even more annoyed in the process!)

The last time I spoke to Stephen he promised a refund at anytime on my
outstanding order if I couldn't be patient anymore (blaming his
suppliers in the process for the problems!)

Nope. AFAIK, it need a multitasking system. However it doesn't need MagiC.
You can use it with N.AES as well, at least the version I've (and don't
use) works together with N.AES. If one still can use the latest version,
v2.0 I believe, I don't know but it shouldn't be a surprise if it doesn't
work anymore. The latest version make use of Gemscript very much so..

Maybe you should go back to use Okami! It actually sort of handle
Base64 encoded text. You must save text to disk and use "View file" to
read it. This is OK to me as only really stupid news-clients would
encode plain text as Base64. (Off course Okami handles Base64
attachments).

Here is his text decoded with original line lengths:

5353. Can I use Brother HL630 LJ?

Newsgroup: comp.sys.atari.st
Date: 1999-03-26 00:00:00 UTC
From: J WILKINSON <jwandjw@ihug.co.nz>
Message-ID: <36FAA77A.20B7C38E@ihug.co.nz>
Source record: 81982

Hi there,

I have moved into a house where there is a spare HL630 laser
printer sitting around doing nothing. Since I don't have a printer
hooked up to my Falcon I thought I might try it out. There is no
printer driver for ANY Brother printers with my version of NVDI
(v3.02) and I cannot find the manual for the printer (I suspect it
wouldn't help anyway!!).

Has anyone successfully used an HL630 with their Atari before?

If yes please tell me which printer driver to use or how to create
one with MAKEPRN supplied with NVDI. Please bear in mind
I will be using AtariWorks mainly to create letters/CV's etc...ie
I'm not just after text output! :)

kind regards,

Chris Wilkinson,
/|\ ATARI Falcon030.

Lets take a long shot (I'm good in those), the HL630 is HP compatible
so choosing a HP Laserjet should normally be enough...

Start with the HP 4L driver, if it doesn't work try the HP II...

If both of these don't work, hold on.....I know someone who has a 630
connected to a Atari. I'll get in touch with him.

CT2 have a complete bus that allows to use other expansions cards..
but you need an adaptor to connect atari expansions cards.
CENTEK doasn't made this adaptor!

You can try to fit other boards below CT2.
(I'm not sure that works with some cards)

>If not, Would it be possible to use a couple of
>ribbon cables with some headers to allow other cards
>to be connected at the same time with the CT2?

That's the last way..
But how long you can make the flat cables? I don't know.
Not informations avaiable here. Ask CENTEK.

Normal Falcon bus: short as you can, i think same with CT2..

If you have a copier called the Blitz copier, not the power computing one, I think it was also called Nutz blitz. Anyway the diagram is within the program.

It's not that hard to do, if you can get the parts.

I do have the Syncro Express for sale, which I think is safer than Blitz. I found with the Blitz that it didn't verify the data when written, and I have come across disks that have had whole tracks missing with it; the track weren't exactly missing but totally useless for the OS!!!

ALWAYS double the backup copy when using Blitz.

Syncro Express doesn't have this problem, and has done most disks that Blitz could only dream of!

5374. WANTED: Happy Parameter for Dungeon Master

Newsgroup: comp.sys.atari.st
Date: 1999-03-27 00:00:00 UTC
From: Steve Stupple <Steve@steverosie.demon.co.uk>
Message-ID: <76CIxiAJ7T$2EwMU@steverosie.demon.co.uk>
Source record: 81803
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,alt.atari

Hi

I'm experimenting with some disk archive procedures, and I need a
parameter file for Dungeon Master.

I have tried the ones supplied but they fail with flying colours.

Any help is much appreciated.

I already have a PC running Linux, and while it's OK for what I use it for
(it runs a webserver) I can't imagine using Linux/X on my
desktop-machine. X is even worse than Windows. X is most likely the most
horrible hack ever released.

> PC hardware is not _that_ bad, when you avoid Billgatesishness.

I don't *like* PCs, that's it. I can't come up with a rational explanation
why, but I don't think I have to either ;-) I bought that PC mainly
because I thought I needed a Wintel-box, but it turns out that I hardly
ever use it so why keep it?

Sounds very interesting. I'm an Atari MIDIot myself (Falcon, Cubase Audio,
MIDI Arpeggiator, SoundQuest, etc.) but don't recall every seeing that
program. Any idea if it'll run on the Falcon?

As I was reading your post I was also
watching a documentary about the island of Borneo.
There lives a species of monkeys with pronounced noses
called Proboscis apes.
They eat only poisenous mangrove leafs.
To be able to digest these leafs they are fitted with immense huge
bellies. This made them look even stranger.

I couldnt help thinking "Microsoft!".

Cheers
Henk

I bought a book on the Intel assembly language, because I thought
I should know about it. Compared to Intel, Motorola is a
marvel of orthogonality and simplicity. Intel gives assembly
programming a very bad name.
They produce the wrong kind of whizzkids.
You need black magic to get code out of a compiler.

Greetings
Henk.

P.S.
I didnt finish that book.

5383. Re: How to put a control character in a scr

Source record: 81812

When I enter the CTL-X character in 7-UP it appears as a "seven-
segment display" 2. Which would seem to be the correct character. The
text editor in STorm, which is the terminal program that I use, will not
allow me to enter this character. If I load the file from 7-UP into the
STorm editor it appears as a vertical line with arrowheads on both top and
bottom.

The log-on script sends a character at the appropriate place in
the script, but the ISP does not respond as it should if it were receiving
the CTL-X.

5388. TOSBOX 1.08 available

Newsgroup: comp.sys.atari.st
Date: 1999-03-27 00:00:00 UTC
From: Mark Slagell <mslagell@iastate.edu>
Message-ID: <36FD9058.D1FEA382@iastate.edu>
Source record: 81817

TOSBOX 1.08 is available as of today. Some changes from 1.07:

1. Non-planar VESA video is now available, to allow high-resolution displays on machines that do not support the older 4-plane modes, and to improve Windows compatibility.

2. The emulated video shifter recognizes the fourth intensity bit, for a 4096-color (STe) pallete.

3. The middle button of a 3-button mouse can be assigned as a double-click, or to pause emulation, provided the existing mouse driver recognizes that button.

4. Several more GEMDOS and CPU emulation bugs have been fixed.

5. The ASL instruction has been rewritten with overflow bit handling to distinguish it from LSL.

6. There is an emulated CPU speed increase of up to 20% depending on cache configuration. (Some systems show little or no speedup.)

Read more about it at:
http://www.emuclassics.com/tosbox

... or download directly:
http://www.public.iastate.edu/~mslagell/tb.zip

I have to correct myself. Jinnee 2.01 can be used as a stand alone prog
under plain TOS. Ofcourse some things won't work at all.
I just downloaded the v2.01 demoversion and I can say that it works under
N.AES too. It seems to be a lot faster then v 1.02 but it still doesn't
allow to launch MiNT applications like "fsck" or "gzip". It looks for a
extensions and as these applications usualy doesn't have one Jinnee
doesn't launch then.

>save upfor a new one someday.

This is pure banditism, where the hell do you live? Planet Mars?
For a price like this I can send my mother in law with UPS to the
other side of the world.....
Let us know where you live, I'll check out the postage rates and if
you like a new TT Keyboard, I'll bring one from the Atari Messe and
send it to you.....

This makes one wonder, if Atari dealers really want to sell their stuff,
it's things like these that makes one realise that we're a hobbyist
platform, and so is the level of most shops.....
I bought my monitor in Germany from a very big PC dealer, in two days
time is was delivered at my door, the fixed shipping rate to a foreign
country was 50DM.....for a box that has a weight of 23Kg...
The same story with my harddisk, this time I ordered it in England from
a very big PC Dealer, two days, shipping costs fixed rate ï¿½10

In 1994 I bought a memory upgrade from Compo Britain, I took them four
weeks to deliver a couple of SIMM's and they charged me ï¿½30 for the
postage. For that price I could have taken the Ferry and gone for it
myself, there probably would have been a bit of change left for a pint
of bitter as well-)

Why is it that Atari dealers take us for granted and treat us like dirt?
What have we done to deserve this, after all, thanks to us they've got
bread on the table....with this bloody attitude they have driven and
still drive people away from the Atari platform.
Bastards, may they burn in hell.

Sorry guys, got a bit off topic here, but these things just make me
angry.....-((((

Cheers from Belgium
Dennis

PS: why don't you send a email to Mr.Seidel and tell him where to stick
his 70DM, the bastard.

$8.00!! Blimey! I'd hate to know what my Father paid for this
HL630 when he purchased it with a 2nd hand Mac LCIII a few
years ago!...

> system disk, so auser can access the control panel, only Idon't
> have a windoz box to run the software. Sofar, imagecopy works ok
> with it when I dump something to it. It just uses the normal
> printer port justlike any old DMP would.

I have found the manual now and IBM Proprinter is mentioned as
one of the 3 or so emulations the HL630 uses. I wonder if a straight
graphics dump is Proprinter compatible from TOS...

> Does yours have just the .5meg of ram or the added board for 1
> meg?

I might crack it open because I'm not sure. It doesn't really matter
because I have just discovered I haven't got a Centronics cable! :)

I think a cable might be a priority when it comes to getting this
printer running! :)

Kind regards,

Chris Wilkinson,
/|\ ATARI Falcon030 owner.

Thing and naes here can start fsck or gzip directly.
Lemme guess, you tried to run those from a TOS partition?
Afaik TOS (FAT, VFAT etc don't support eXecutable flag), only minix,
ext2fs etc do.
So, for 1 problem, the real answer was the filesystem.
For the same problem, a hack/trick is to rename them into .ttp

Yep, but there's only one threaded hole available to bolt the cradle to.
There is another hole that looks suitable but it's about 1/8th inch out.

Why doesn't Centek's suggested place work well?

And I'm using Okami v2.0 as mail/newsreader and that is a 200 % pure Atari
product.
The only thing that people should learn to do is looking what the header
says. If they would have done this then they would have seen that the
message was MIME encode, and that is something that every decent Atari
mail/newsreader can handle with ease nowadays.
A MS or whatever non-Atari reader can handle this on the fly I suppose. On
the Atari side one have to do a little work. For instance with Okami v2.0
[control][x] to extract a Mime encode message
[control][o] to view the encode message.
Pictures like jpeg and gif can even be viewed on the fly with Okami.

I don't know the price of UPS but if one send via the Belgium Post a
package of let us say 2,1 kg from Belgium to Norway it will cost you
around the 2.500 BEF (42 UK pounds, 67 US dollar). I forgot the right
price.
I know that because some time ago I wanted to send such a package
containing 8 bottles of Belgium beer (cost=500 BEF, 8,4 UK pounds, 13,4 US
dollars). I didn't send the package ofcourse.
I think I should talk to UPS.

>I bought my monitor in Germany from a very big PC dealer, in two days

I can confirm this. I bought my Hades in Germany. The shipping rate was 75
DM (insured sending)

Yep, Ping is very slow these days. It all begun when they changed from
Belgacom to Telecom. Oh boy we have had (and still have) lots of troubles
since then. Sometimes it happens that the data tranfer stops for minutes.
Don't tell me Dennis that's because I'm using MiNTnet. It's really a
problem on Ping's side. Read ping.support.
However STing has problem with PING. It takes quite some time before (30
sec)one one is able to send mails. With MiNtnet I usualy can send the
mail instantly.

Nope, Ping supports ISDN, V90 and X2 but this one will disappear very
soon. The most complaints comes from guys like me who uses 33k6 modems.
I for instance can make use of the V90 PoP of Kortrijk. If I do, I get
all the time disconnects and very slow transfer rates. The X2 PoP of
Kortrijk seems to be better. The best for me however is the PoP Gent. But
since a few days this PoP seems to have troubles too. (busy lines,
disconnects)

Are you a member of the former Atari 'scene'? Did you, perchance, visit the "ST News International Christmas Coding Convention", in Oss, Netherlands, December 1990?

Then you should not wait a second longer and surf over to http://www.fortysecond.net/stniccc2000 to discover that, in fact, a reunion of that very historical event is being organised for December 2000, a 10th anniversary reunion as it were! It is going to be the coolest event of the millenium, I can assure you!

Source record: 81883

What do you need to do to "fine tune" STing? My understanding was
that the packet size, etc. was negotiated with the ISP when the PPP
connection is made. I've tried resetting the packet size once and it
didn't seem to make any difference. Exactly how should I go about setting
STing up for maximum speed?

I have the following items for sale. All are in good working condition.

Atari 1040 STf computer w/1meg RAM, TOS 1.04, 720K internal floppy drive, mouse, internal power supply, owner's manual. - $50.00

Atari SM124 monitor w/owner's manual, original box, power cable . - $40.00

ICD Advantage Plus Host Adapter w/DMA cable, 2 drive SCSI cable, ICD host adapter software, owner's manual. Has on board clock. - $25.00

generic AT mini-tower computer case w/220W power supply. Suitable for mounting a host adapter and hard drive. - $15.00

Supra 14.4K external modem (complete in original box). - $15.00

Brother HJ-400 ink jet printer (graphics capable, but black ink only) w/power supply and Canon BC-01 ink cartridge. - $30.00

Will consider offers on all as a package, or on individual items. Buyer pays shipping.

Please reply to gwestndrf@aol.com

>It is not only M$, how big is netscape?

It is only M$ in my opinion. OK its large compared to Atari software but compared to M$ its minute. With a whacking great cache directory probably 8MEG or so the whole directory is 27MEG. I think it installed clean at about 16MEG including good HTML writing software.

Personally I think Netscape do a brilliant job. I just wish they did an operating system too.

Trouble is with Win98 I still have to have Explorer anyway. I mean you can't uninstall it can you? I remember with Win95 and no explorer my system was a lot less stable.

5429. /]\ Sears Super Aracde II very RARE will trade for Atari St

Newsgroup: comp.sys.atari.st

Sears Super Arcade II This is VERY RARE and hard to find for those who don't know what it is. It looks like the Atari 7800 but only plays the 2600 games. And, it has four ports for four contollers. This is a really cool system. The controls are shaped like a rectangle and are two way controls. You can us them as paddles or a joystick. I only have three controls. Eveything is in good shape. This is a must for any collector. I will also will throw in a few games. they are Target Fun, missle Command, Asteroids and Space Invaders these are all Sears games

Email offers to

katom96@aol.com

thanks Tom
Video games

Sure, but that does not mean it's good style to post plain text
base64-encoded. But as I've already said in another thread, the problem
most probably was that Joe's text had CRLF-line endings (which are
default on Atari), and either his newsreader or his NNTP server decided
that this is binary data that has to be encoded.

Ciao

Thomas

> with that or that TCP/IP stack.

To resume the actual situation : you can choose between "easy" installation
and rather ennoying "timing" problems or redirect your choice to a very
efficient connection with "hell like" installation ....
And above all you never can be sure the IP you have chosen will work with your
connection programs ....

After having used MintNet for two years, STinG for 8 months ....
I must admit I never installed Iconnect solution and never succeeded to
connect with the famous french suite.

Jo

Let's hope things will quickly change ...

>
>Greetings
>Henk.
>
>P.S.
>I didnt finish that book.

The problem is that the programmers that put these programs together
don't optimise the code. They learn a simple language and aim to use as
much memory as they can. They believe that ALL pc-clones have x amount
of free space and should have it all used up.

The Atari, Amiga... owner knows they have a restricted memory pool and
will work to it. Compare what is possible with Calamus 1.09, an old
package, with the results with a pc application and look at the size of
the file and how long it takes from turning the machines on to switching
them off!

Anyone can throw a program together, on the pc side I think size is
everything, the bigger the better! If 10 programmers all wrote a program
to print a hello on the screen, the person which used the most resources
will win!!!!

Even the Y2K problem is exaggerated! What does a microwave want to know
about dates! Some old video's deal with time as a matter of days and
weeks not precise dates! There are lots of IC's all containing timers
most are NOT date crucial.

You also need faster CPU's to cope with the lazy programming!

enough said;)

I feel the same way. My brother put Linux (he tried out both Slackware and
RedHat) on his P233, and then installed the KDE desktop. Very nice, very
pretty - but no way I'd trade in MiNT/N.aes/THING and my underlying TOS
ROMs for it. Maybe as a secondary machine to play with...maybe... ;-)

Many years ago I was at a relative of mine, and he had an Atari ST.
I got to play on it, and there was this game that I found to be very
fun.
There were two castles, one on each side of a big mountain, and the
object of the game was to shoot the other castle with cannons.
Can anyone please tell me which game this was?

Not possible. This server is only one of the computers in the domain
rma.ac.be
Each computer has already a DNS name, but the name for the ftp-server at
the moment is as difficult to remember as the numbers.

Greetings,

Saka

Positive. But I'm talking about the official version, not of a beta
version. For a short time one could download the beta release of v2 and
that is maybe the version you've. The official version shouldn't be on
your BBS

Yes the Falcon version (and the ST version) is on:

http://www.users.zetnet.co.uk/pinkpage/maggie.htm

This is part of the Reservoir Gods website. The only thing against the
files is they are in ARJ compressed format, but they've helpfully put the
UNARJ.TTP program on it too.

Cheers!

I did not treat it as anything special. Newsie did that by itself (it
told me it was decoding TEMPDESC.TXT) and when I checked there it
was. ;))

It did make me wonder what all the fuss was about ?? ;))

Actually, Pine (a rather good Unix client available for MiNT) also auto-
unpacks plain text attachments, hence why I did not encounter the problems
NEWSie users did.

Nonetheless, messages should _never_ be encrypted, even in Base-64.
Plain text is what's expected. STiK to it..... *grin*

Since I don't have the time to use this computer, I'm selling it for
someone who'll use it.
Here's the specs..

Atari Mega STE - 4MB Ram, 40MB hard drive that was just replaced,
keyboard, mouse,
power cable.

I'm asking $100, buyer pays shipping. I'll most likely ship UPS Ground
COD. That way, the
buyer gets the computer in hand before paying. Any interested parties,
email me.

All you need to do is pull out the section on the back side,
take two screws out and pull it out,if there is a boardup on top
of a connecter, then you have more ram (I think 1 or 1.5 is max),
if not, then you only have .5meg.

This one came with the extra ram, but it would not work! I
pulled off the extra ram board and it's been working ever since.

Plus when I got it,it came with an extra toner cart too, which
I've not used yet.

One thing, when you 1st get it running, you might get some toner
streaks on the paper, that comes from it sitting un-used for a
time, run a sample text dump for a few pages and it clears up as
you use it more.

Hi Kevin. I can read this fine.

The first post I selected NEWsies extract feature thinking it was a binary.
It happened so fast I didn't see it created a TEMP file with the MIME
encoded text. So I never looked for the file in the NEWsie work path.
This is the FIRST MIME file I had encountered.

Now what do Deja News readers do when encountering mime encoded text?

I prefer avoiding mime if at all possible.

Thanks,
Later Brian.

>>product.

Yup, I have been using NEWsie. It has a Mime feature, which I hadn't used yet, as I hadn't encountered such a post. I initially thought it was a binary. When I clicked on extract, it happened so fast I didn't see the file converted.

However, to my knowledge (limited knowledge) NEWsie doesn't do this on the fly.

>I didn't expect you to use anything less then that.-)
>
>>A MS or whatever non-Atari reader can handle this on the fly I suppose. On

>With *most* newsreaders this may be so but ASH Emailer does it on the fly
>also. I've still got to receive the first posting this program can't handle
>on the fly....

ASH NEWSREADER finally good for something. I was wondering why you continued to use it;-). I have so far only been on the receiving end of the ASH NEWsreader posts which lacked the carriage returns.

>
>>The only thing that people should learn to do is looking what the header

>>mail/newsreader can handle with ease nowadays.
>I agree

Yup, I did read the MIME header. Then I didn't know what to do:-). So click Extract and see what happens.

If someone knows how to get NEWsie to show these on the fly, that would be great. I have possibly overlooked something. As it is it creates a separate file.

Later Brian.

I hope that CAB hasn't finished developement. I saw 2.7 at the TAF meeting last year and although every one here is a good bunch, I really thought that Atari Web browsers were viable commercial product. Therefore I picked up the Falcon to get a little more colour and spend more time WeB BROWSING than yacking here:-). I just installed the demo about 3 weeks ago. It is good enough to purchase, Especially since I was using 1.5 before, but I am now hesitant to purchase if this is the end of the line with CAB.

Actually Sting itself also supports automtic login-logout. The client
can send UDP packets to dial and hangup. It's even possible to control
the Dialer from any computer (including Win-95) on a LAN. But, afaik no
client makes use of this feature.

Check my home page for a VB5 .EXE remote control for Sting. It's a very
tiny tool, only 2.21 MB zipped :-)

I have the following for sale. I prefer to sell the whole lot as a package.
However, I am willing to sell individual items but the ST must sell as a unit
and not as parts.
Here then for your viewing pleasure is a list of my ST stuff :) :
HARDWARE:
4mb 520ST with SC1224 color Monitor, SF314 Floppy Drive, mouse, joystick, Alpha
Data trackball, manual, System & language disks, and mouse cleaning ball.

GAMES:
GBA Championship Basketball The Sentry
MetroCross Star Glider

Guild of Thieves Star Ray Shadow of the
Beast II
AD&D Hillsfar Gold Runner II
Station Fall Golden Path Grid Iron
The Black Cauldron
Battleship
Pirates of the Barbary Coast Flight Simulator II

APPLICATIONS:
Habba Check Minder H&D Base Hippo Pixel
Hippo Fonts Cyber Sculpt Art & Film Director
Multi Desk Calamus Outline Art OutBurst 3.3
VIP Professional Flash That's Write
v.3.1G
Atari Logo

BOOKS/PUBLICATIONS:
ST Basic Source Book
A Source Book for Atari Logo

BTW, I am not leaving the Atari scene.

> I was wondering wether it was worth upgrading beyond CAB 1.5
> . I use a 4 meg STFM with TOS 1.4 and if so who in the UK
> has the rights to sell ASH's products .

Yes I would say get Cab 2.7 which is the latest English version, which I'm told is even faster than 2.5 (which I use atm) at formatting and loading graphics. Cab is available from System Solutions, who are the official UK dealers for ASH, they're on 01753 832212. They also have a website on http://www.system-solutions.co.uk/cafe

The ST really isn't fast enough for web browsing, as the ST's resolutions need a lot of dithering etc to display even readable graphics. Its fine for email and newsgroups, but it just hasn't enough power for the Web. I would suggest looking for a secondhand Falcon, as then you have 256 colour and 65K colours resolutions, which makes for less processing time.

I've had mine for a year or so now, and even then I picked up it s/h for about 260 ukp, and I wouldn't be surprised if you can find similar or even better deals.

Cheers!

James

All the fuss about?
Well, it is quite simple imo.
uuencode and MIME have a special purpose.
Joe, or the emailer/newsgroup prg he uses, or the emailer/newsgroup
program settings he's got are just wrong.

Encoding simple ASCII text is retarded.

the whole point of encoding is to encrypt binary, into readable
characters.
Now encoding readable characters into readable characters doesn't make
sense to me.

Somebody has forgotten MiNT-Net in the battle...

JW> I haven't used Iconnect and I haven't used STinG for a online
JW> connection (only have networked to a Mac) but it looks like a battle for
JW> who is going to be the defacto standard for TCP/IP or PPP networking
JW> here. It would be beneficial if some guidelines were agreed between ALL
JW> the authors for an OS level stack, so that ALL internet software could
JW> use ALL TCP/IP stacks written instead of the choose this but then you
JW> cant run that kind of scenario we're currently looking at...

My opinion on the battle: STinG might be the faster (and it has a lot of
clients)... but IConnect is the easier to setup (although it has not many
clients)... but MiNT-Net is the most powerful (because it has the most of
clients) although the harder to setup.

I never used STinG... I dropped MiNT-Net when I got IConnect... and I use NOS
for the news/e-mail/ftp. (One TCP/IP access program more!)

And there is also the TCP/IP stack of WenSuite... And the Draconis' one!

J. Wilkinson is definitively right: Too much programs, too much
incompatibilities. An OS level TCP/IP stack is what we need in order that the
end-users have just to wonder which program to install and not if it will work
with that or that TCP/IP stack.

That is sure that there will be one subject less to quarrel about. ;-) But
we shall quarrel about which client is the best... ;-)))

See you later.

Martin Byttebier <tos4ever@ping.be> wrote on 27-03-99:

>Yep, Ping is very slow these days. It all begun when they changed from
>Belgacom to Telecom. Oh boy we have had (and still have) lots of troubles
>since then. Sometimes it happens that the data tranfer stops for minutes.
I had the same problems until I changed from tel. company, I'm on Telenet
now and so is Ping. Ever since then everything runs very smooth here, which
was not so with Belgacom.

>Don't tell me Dennis that's because I'm using MiNTnet.
Me? I'm not saying anything, I've learned my lesson.... I'm not going to
start a new OS War..-)

>However STing has problem with PING. It takes quite some time before (30
>sec)one one is able to send mails. With MiNtnet I usualy can send the
>mail instantly.
STing also has problems with Skynet and UUnet....
I can't say anything about MiNTnet because I've never used it...

With IConnect it takes exactly 25 seconds from dialing in, getting connected
to PING and getting connected with the SMTP and POP servers.
The same procedure with STing takes about 1'30" which is three times as long
in that time my incoming mail is already received and I'm disconnected with
IConnect. And as you know, telephone rates in our small beloved country are
not something to take lightly......

Another feature I like about IConnect is that it connects and disconnects
automatically. When I write a email or posting with ASH Emailer, I click
the "send" option, IConnect connects to PING sends the message and terminate
the connection. It's a feature one doesn't really need, but I got used to
it.

>Ping supports ISDN, V90 and X2 but this one will disappear very
>soon. The most complaints comes from guys like me who uses 33k6 modems.
>I for instance can make use of the V90 PoP of Kortrijk. If I do, I get
>all the time disconnects and very slow transfer rates. The X2 PoP of
>Kortrijk seems to be better. The best for me however is the PoP Gent. But
>since a few days this PoP seems to have troubles too. (busy lines,
>disconnects)
I've got a bit more luck... I can use the POP of Kortrijk, Gent and Antwerp
Since months I use Antwerp, never problems or disconnects....dial in is
always succesful from the first time, but I use a 56k2 V90 modem...

Cheers from Belgium
Dennis

>price.
Martin, this was figure of speech... If I want to get rid of my mother in
law, I'm not going to do it via UPS.....maybe a very slow banana boat...-)

The Belgium Post is just like most other Belgium institutions (telephone,
train etc) managed by people who don't know the first thing about marketing
and management, in a corrupt country like ours this is no problem at all,
if one has the right membercard from the right party, he can even become the
governor of the national bank without knowing the basics of banking...
This was a bit off topic, sorry...but this is another thing which makes me
angry.-((

UPS is lower in price then the post, but it still would cost a lot of money.
The best way is to send something via secure Parcel Post. A packet to Norway
from 2.1kg will cost 325BEF (ï¿½5 or $8.5).
Sent from Germany, that parcel should cost roughly the same. I've ordered
a couple of CDs once from Seidel, and know that they don't send goods with
UPS or other couriers but also via ParcelPost. So asking 70DM is daylight
robbery....

>I know that because some time ago I wanted to send such a package
>containing 8 bottles of Belgium beer (cost=500 BEF, 8,4 UK pounds, 13,4 US
>dollars). I didn't send the package ofcourse.
>I think I should talk to UPS.

Don't talk to UPS, they've got special rates for firms who send all their
goods via them. As a private person you can expect to pay much more.
Prices for Parcel Post:
Europe up to 2.5Kg : 325BEF (ï¿½5 or $8.2)
America : 475BEF (ï¿½8 or $12.5)
Rest of the world : 600BEF (ï¿½10 or$15)
Still expensive for 8 bottles of Belgiums Best, but for a keyboard or other
computer hardware quit reasonable....

Cheers from Belgium
Dennis

>The reason I felt confident in making that statement is STinG downloads
>data at my modems max baud rate and better sometimes with compression.

Hi Charles,
I'm going to be very carefull, avoiding a TCP/IP war here, which is what
some people would like...

Like most people your experience with IConnect is with CAB. And I agree
this is a unlucky combination, I don't think it has anything to do with
IConnect, its the OVL which just isn't as good as those from Dan Ackerman
and Olivier Booklage. I use STing myself to surf the web....
IConnect like most other ASH products have had a couple of updates since the
CAB version,IConnect is now version 1.7, it comes with ASH Emailer.

Comparing STinG to IConnect can't be done, simply because there are no
clients which can run on both, comparing FiFi to aftp can be done, and the
figures speak for themselves. Of course one can say that its aftp who's the
culprit and not STing, this is open for discussion.
I've just stated the facts with some figures: The Iconnect clients are ALL
about 25% or more faster then the STing clients.....

>Ahh, you may have the MTU set to high. However, I've had some stop and go
>with every TCP/IP stack I've ever used. Actually, it's not that uncommon
>these days as net traffic and busy servers are a problem also.
Nope, the MTU is set just right, just like with IConnect it was a matter of
trial and error, but in the end I got STing tweaked and tuned perfectly.
Like I said, these stop and go occur with IConnect also, but somehow they
don't last as long and don't happen as often as with STing (clients).

>Is it the stack or
>is it the prg that's slowing things down overall? I dump all web caches
>into a RAM disk just to speed up displays.
Well I gues it's the apps. Since my previous posting some people who use
MiNTnet have written that they don't experience the phenomea I wrote about.
I assume that the MiNTnet clients are just like the IConnect clients more
optimised for the stack....???

>I tried your ISP, PING. It did load slow for me. Netscape or CAB. You might
>give mine a try: www.telebyte.com and www.jps.net

>I doubt if they will come in pause free for you ;)
Well, to do a objective test, I thought that the best example was to go to a page on my own server, this way I'm sure that the data should at least come in one continuing stream.
You of course, should try it out on your own ISP server.

>Routers send all packets (I believe) out as 576 octets. If you make MTU
>too large, they may frag and have to be resent. very slow. If you make the
>MTU too small, that's inefficient also. 1500 seems to be about max on most
>ISP's here. However, 576 does work just as well/better on some.
Yes, I knew this, and with trial and error it's now on 1575 which seems to work best in my case.

>I thought PING only supported 33k6 modems <g>? I have my serial port set
>to 115k2 on my Nemesis/Falcon and the same on the Laptop. Unfortunately,
>I can only connect at about 24k/26k4 baud due to my location. Too far
>from a switching office. 56kflex modem on Falcon/33k6 internal on laptop.
PING is part of EUNET, one of Europe biggest ISP, they were very quick to adopt the new V90 standard. PING is one of the expensive ISP in Belgium, but they have a very good track record, and compared to other ISP here in Belgium they are probably the best. (I've heard some horrorstories)
My serial ports are also set to 115K, I started at 230k but found out that this was too much for my TT (to much errors).

Something else that made a big difference was to increase the value of the SCC.PRG (serial2 driver from HS2MODEM). Instead of the standard 256 value I changed it to 16384. Try it....

Cheers from Belgium

Paul:

Thanks for responding.

Just a little background on Tunesmith. It came out at the time when
Algorithmic Programs were the "Big Thing"..late 80's. Actually, Dr T
kinda kicked it off with "Algorithmic Composer" for the commadore 64.
A certain Jan Hammer found out about it and had to purchase a
Commadore 64 system to put next to his Fairlight just to run Algorthmic
Composer.He used it on his Miami Vice Scores. Then Jim Johnson..the author,
decided to upgrade his ideas and the result was Tunesmith for the Atari.
Also Dr T put out "Fingers". another Algorithmic program. Both could be
used as modules for the MPE system on Dr T's KCS sequencer. Also 'M"
(Intelligent Music) amd Ludwig (Hybrid Arts) came out at the same time
along with Music Mouse (Laurie Spiegel).

As far as Tunesmith working on a Falcon..I don't really know. It works
on my Mega STe, but does NOT work on my TT030! I have a freind with a
Falcon. I might try it on his system and see if it works.

All the above programs mentioned can be purchased from B&C Computer
Visions.

http://www.myatari.com

As I recall
Ludwig. Tunesmith and Fingers was $30.00 each.
"M" amd Music Mouse were only $10.00 Each.
Unfortunatly..they ALL use key disc protection! (DRATS!)

Hope this helps.

Just to start a new tread!!

Did anyone ever find out, what happen to the Falcon program that was intended as answering machine?
I remember there was at least 2 different project, was they canceled or what?
There use to be a shareware program VOX-MAIL by Michael Fung, but the programmer appereantly disappear. The docs is from 1994.

There is thw adresses one in Pittsburg PA. valid only up till May 1994?
The other in the summer (may to august) is in Singapore.

Has anyone ever considered to make one of the small vidio cameras working on a Falcon or TT?

I imagen it was something to use as a door spy?
Especially if someone living like me, in a big appartment building with at door phone down at the front floor.
Sometime it was nice to know who is pushing the bell, before I answer the phone.
Could be the repoman!

cheers

Joergen

5493. MagiC Documentation Project

Newsgroup: comp.sys.atari.st
Date: 1999-03-28 00:00:00 UTC
From: John Whalley <news@whalley.demon.co.uk>
Message-ID: <01be78f7$cbae3700$LocalHost@xpnwjjkf>
Source record: 81835
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

Hi,

For a long time now, many programmers have been complaining that there are no programming docs for MagiC in English, and the MagiC author (Andreas Kromke) doesn't have the time to do his own translation.

Some of you may recall back in January a brief discussion about the lack of English programming docs for MagiC. Guy Harrison suggested starting a "community project" in the form of a web site where people could download parts of the German documentation and submit translations.

As a result, I've been in touch with Dr Kromke, who has kindly given permission to go ahead with the project, and has supplied the latest docs for MagiC. I've set up a pilot project with a few files initially, as the docs are extensive (the archive unpacks to over a megabyte). It's at:

http://www.whalley.demon.co.uk/atari/mdp/

The idea behind this site is to make available the German docs in easily-digestible (and downloadable) chunks for people to translate as and when they have the time and inclination. I myself have no German worth speaking of and I'm not a programmer either, so my role in this is purely as host for the pages and co-ordinator (where necessary) for the results.

The site also includes info on translation tools to help get you started.

All help will be gratefully received! Please take a look and contribute if you are able.

Thanks,
John

I'm not a musian but some thing ago when I was at home of a English friend
of mine who is a musian and who use Cubase on his Hades but only under
plain TOS I temporaly installed my Multitasking system N.AES on his Hades
to show him the benifits of that system. Cubase does work but there were
some minor redraw problems. Cubase is rather an old prog and is AFAIK not
adapted to be used with modern systems, hence the redraw probs. I didn't
do any fine tunings however. I didn't used it in 65k resolution as the
graphic card on his Hades doesn't support that resolution.
I heard from other people that Startrack does work with N.AES.
Have you tried Cubase and the other prog's you've under 250 color
resolution?
65K resolution seems for me not the best resolution one can use on a TT030
with Crazy Dots II card. I've such a card on my TT030 and IMHO the 65K
resolution slows down too much the system.

5497. Re: FS: 1040STf & other items (US only) - correction

Newsgroup: comp.sys.atari.st
Date: 1999-03-28 00:00:00 UTC
From: gwestndrf@aol.com
Message-ID: <19990328062511.01126.00000610@ngol02.aol.com>
Source record: 81839

I have the following items for sale. All are in good working condition.

Atari 1040 STf computer w/1meg RAM, TOS 1.04, 720K internal floppy drive, mouse, internal power supply, owner's manual. - $50.00

Atari SM124 monitor w/owner's manual, original box, power cable . - $40.00

ICD Advantage Plus Host Adapter w/DMA cable, 2 drive SCSI cable, ICD host adapter software, owner's manual. Has on board clock. - $25.00
Note: This is an older model. It definitely works with a Seagate ST296N or a Quantum ProDrive 40S. It doesn't work with a Quantum LPS 52S drive.

generic AT mini-tower computer case w/220W power supply. Suitable for mounting a host adapter and hard drive. - $15.00

Supra 14.4K external modem (complete in original box). - $15.00

Brother HJ-400 ink jet printer (graphics capable, but black ink only) w/power supply and Canon BC-01 ink cartridge. - $30.00

Will consider offers on all as a package, or on individual items. Buyer pays shipping.

Please reply to gwestndrf@aol.com

5498. MAGGIE 27

Newsgroup: comp.sys.atari.st

The ST version of MAGGIE 27 as released this weekend is available from the STOSSER web pages at http://www.accrington-web.co.uk

I presume there is a Falcon version.. But as I havn't got a Falcon then I can't help :)

I havent seen any other mention of the release or where to get it (I got this one emailed to me).. so I plonked it on my STOSSER pages for your enjoyment :)

5499. STOSSER Cheats

Newsgroup: comp.sys.atari.st
Date: 1999-03-28 00:00:00 UTC
From: webdesign@accrington-web.co.uk
Message-ID: <37001a04.7197850@news.freeserve.co.uk>
Source record: 81841

Cheats for STOSSER Titles (Well the ones that have cheats in)
http://www.accrington-web.co.uk

H.E.R.O.
The Original release of H.E.R.O. allows you to SAVE or LOAD games from a small video screen when you turn towards a computer monitor in the actual game..well you get your choice 1 to SAVE and 2 to LOAD or whatever, well press C and the cheat will be enabled, it turns off all the BADDIES and lets you walk over slime or fall large distances.

H.E.R.O.2
Use this one only if desperate, as with all cheats, this was here for my benefit to help test, its not supposed to be part of the game, and in certain circumstances will make it worse,
The cheat turns OFF the baddies, gives you unlimited door cards and explosives and will let you simply go to an exit and leave,
Jumping into slime while this cheat is active will put the whole game graphics out of sync, also as the cheat gives the game loop less to do, it will speed up, but the sound wont, so sound to graphics sync will also be out, So again, dont use the cheat unless desperate,
On the main menu press C and a notice will say Cheat not found, Press it again, and again, 20 times, or more, but at least 20, it will still say Cheat Not Found, but it will actualy be activated if you pressed C 20 times..

ISLAND STRIKE
In the actual game you can press the SPACEBAR for a detailed menu that you can use to search for targets and goodies, gives you general updates of the game etc, well while you are in this screen you can PULL BACK on your joystick and press FIRE, You will then be presented with a hidden menu that gives you certain options, such as turning the ground cannons off, upping your fuel and ammo to well above the maximum and other goodies.

VIDIGRID 2
In the game and while you are not currently holding a section of the puzzle, Press the key to the furthermost right of your keyboard, the ASTERIX * at the far upper right, this will complete that level for you and give you the points that would have been awarded for the time left, you can skip through every level with this, as apposed to having to play the same level every time you boot.

BILLY BOY
On the high score table, move your Joystick LEFT then RIGHT then UP, But do it reasonably quick, Then in the actual game you will have access to the FKEYS pressing these will give you various things, some

will give you current information, change colours or finish the level for you...beware this as with other cheats is not an actual feature of the game, this one slightly messes the screen up... use if desperate only..

DIAMOND ICE
In the actual game you should very quickly press HELP HELP UNDO HELP, then when playing the game you already have the option to use the arrow keys to look around the play area, you would already know this if you had read the doc files..well after you have set the Cheat on, you can still use this to lok around, but this time you take the sprite with you, and on pressing SPACEBAR the sprite will land wherever you are, great for walking through walls etc.

: TT030 and my Crazy Dots II with 65K colorresolution.
: I hope somebody can help.On a PC such an item is a piece of cake, why not
: for our platform ???

There are MIDIfile players out there that you should try, there is one
from Probe House Software at:

http://www.geocities.com/SiliconValley/6880/phsw2.html

(I can't recall the name right now) I would try that if it might meet
your needs.

As far as a full fledged sequencer, I would recommend Logic. I was
running version 2.5 earlier today under Magic 6. I can't vouch for its
stability under Magic as of yet, as I have just recently started using the
OS, but I know that it runs. I plan to put a bit more ram in my TT and
test Logic under Magic some more, so feel free to e-mail me if you would
like an update.

I think so particularly if they are going to continue upgrading it.
However, download the 2.7 demo and check it out for yourself. It is self
extracting. The biggest feature is its use of frames.

later Brian.

Why must we take care of this software ? Really if the program itself was
serious perhaps should we also be.
If this program had been a game they shoud have named it "Alone in the dark"
... oh ... but, if I remember well, there were only 3 episodes of this one.

5507. Re: My cat off-topic?

Newsgroup: comp.sys.atari.st
Date: 1999-03-29 00:00:00 UTC
From: Doctor Clu <clu-da-bard@geocities.com>
Message-ID: <36FF2244.45E9@geocities.com>
Source record: 81649

Speaking of the Southern US... here in TEXAS I have a great story to tell. :)

I had let my friend borrow my Atari8 percom disk drive. He had a serious roach problem, but since he was my best friend, I gre used to having to see 20 small roaches at any one given time when visiting. One day I decided I needed the disk drive for something I was doing on my Atari 400, and picked the drive up. Since the year was around 1997, the drive was barely functioning, so the case screws were loose for quick repairs.
I put the drive in my car, and zoomed off to work.
Arriving at work, I saw one small roach walking around on my disk drive. (I think you already know where this is going...)

I realized the old addage here in Texas "where there is 1 roach, there are at least 12 others." I decided to slide back the disk drive case. The disk drive motherboard was moving... alive!

The sight made my skin crawl to the seen hundreds of roaches!!

I slid the drive shut. (Well, my friend did mention the drive belt was slipping.. hehehe..) Now the best thing to do in a situation like this, as my dad would suggestion from his experience from working in the phone company and serving used phones with similar surprises is to put the device in a plastic bag and let it sit in the sun. The heat in the bag will kill all the roaches inside and the rest will sufficate from lack of oxygen. Nice advice.

As for me, I ripped that drive out of my car and proceeded to smash the disk drive against the pavement to shake out all the roaches. Later I would soak the drive in pestacide.

I was pissed. I called my friend, who, up till that time, had a policy against killing living creatures. Even roaches.
"Rob."
"Hi!"
"That drive that we use was filled with hundreds of roaches. I destroyed that drive knocking them out."
"Oh...."
"Rob..."
"Yes..."
"No one makes me destroy a piece of Atari equipment. Inform those roaches of yours that they only have 30 days to live before I wage total and complete genicide on them."

He did, and 30 days later, I did. (evil grin)

3 fog bombs, four cans of raid, and many thumbs later... my friend to
this day keeps a clean house. :)

I guess that if you plan on using Cubase, you should use a boot manager
to boot in SingleTos when you use Cubase and MagiC for any other stuff.
Cubase is worth the sacrifice. After all, you don't usually compose
music while surfing the net or writing a letter, do you... unless you
can multitask more than your computer can.

> I hope somebody can help.On a PC such an item is a piece of cake, why not

Getting Cubase to run flawlessly on a PC is quite a feat actually!

Well, so another Atari engineer that went the route of Atari? Have you ever met Steve Weyer? I believe he worked for Atari during the proto type years of the ST (during the Atari 800 era) and worked a lot in the Newton department and is the creator of the "Newt" profgramming language and the "Newt's Cape" browser. Both really great programs.

Well, I'd love to hear more about your experiences with both Atari and Newton, since they are both my favorite. :)

And maybe you could advise on how to connect the two. So far I've managed a simple serial connection sending information FROM the Newton to the Atari ST. I think Steve Weyer's "Slourp" program might allow to extract information from another desktop, like an ST.. but so far untested.
Ay any rate, I set up a *NEW WEBSITE*, the first of it's kind in the Atari and Newton webrings for connecting the two platforms, and in the future, I'll be adding new wings to the website, having links and information on both platforms. Check out the URL at the bottom of this message!!

Remi,

I'm with you here. We might see another one, built for MagiC... :-)

(perhaps an extended Iconnect?)

Problem is, on OS level there never was done something. At least not from
Atari. The only one you might call an OS-level one is pppd, then you need
to run Mint/Mintnet on your set. All other ones, being TOS/whatever
compatible are limited in their clients. Sting being the best one IMO.
But then there are clients like ASH-Emailer and others who need Iconnect,
Marathon and Adamas need Draconis, Wensuite needs its own stuff and it's
all not compatible! Sting has the most wide variety of clients but is the
worst to set up. At the same time it's widely configurable, so tuning it

to max performance isn't all that easy. I have no problems running Sting with my ISP, Demon in Holland; Demon appears to be having lotsa problems with "connectivity" to the KPN network here, since they're using one of the newer independent phone companies over here. At peak hours the link to my ISP looks like I'm hooked up to the busiest server in the USA.

But there's a lot of weirdness in the whole situation: the basic OS was TOS, TOS didn't have a TCP/IP protocol, so Stik saw the light. This one evolved into Sting. Next come some idiots with new clients PLUS a new TCP/IP stack but it works that way that Stik/Sting clients don't run with it. I call that bull too. Waste of time, effort etc etc etc. Something like "we're gonna take over the scene, guys!" (hey, where do I know this from?) So here ASH is to blame, as well as the makers of Wensuite and the Adamas bunch. One of the reasons I'm not interested in that stuff. (apart from that I tried both and all I got was a non-working situation on my set). This platform is way too small to get secondary-splits on stuff like a TCP/IP stack. Or should I start programming a new graphics tool for completely new formats which no other program can handle? Hey guys, download my "GiGraphic" program, it works with .LHF files only, but it's far-out and you'll all be stunned! Yeah, sure...
BTW, it's available commercial only (price 100 USD), you can fetch a demo which works for 3 minutes only and is buggy like hell, but start spending your money and I'll see if I can fix the bugs for you. No guarantee however...

Again, this all depends on where you live. And as you forgot to give us
that information, it's rather difficult to help you.

However, since this sort of geo-centrical behaviour is generally typical
of United States citizens, we can probably safely direct you to Best
Electronics, B&C computervision, the Computer Dungeon or Bravo Sierra
computers. A quick web search should find them pretty easily ;-)

Jo, Wensuite IS a game.....it's a adventure. You play the role of a stupid
user trying to find a way to get connected....
In the second part one has to find the key to stay connected, if you fail
the program will disconnect.....and its back to part 1.
In the third part one is challenged to find a way to use the various clients
without getting the program to bomb out or get a exeption error.

This is one of the greatest games ever written, but because of the wrong
marketing everyone thinks it's a program to surf the net, email and read
newsgroups. We of course know better....-)))

What I like about the game is that you can play it forever, usally when
one finishes a adventure, that's it....not with this one, its build in
random "problem generator" generates a new game. New fascinating obstacles
to overcome....You can play this game for the rest of your life.... surely
that is good value for money?

And the best news is:
OXO Systems has now written a sequel.... The first challenge is to order the
program..... Only for the diehard Adventure/RPG fans....

Wensuite is far more then just a game, its a way of life!!!

Dennis

Did it? well take a couple of days off, relax, go for a walk or just take some phenobarbitol... but don't blame the state of your nerves on me.

>The only interesting part of my message was the end
So it was a joke, French humor?, hahaha....

>No offense?
Nope-)), my nerves are allright.

>Well, my question is still pending. Nobody agrees with me?
I for one don't agree with you....
Looking at the current situation, there are only two TCP/IP stacks which have enough clients to satisfy ost of us: STing and MiNTnet.
Since MiNTnet is only used by a relative small group and to run it one needs a quit powerful setup I doubt this will ever be a great success.
STing remains... and although it has it flaws it has a lot of clients which are being constantly updated/developed. Since all this software is also freeware one can see clearly the way we're moving....
I wouldn't be suprised if one of these days, a update from STing comes along and since P.Rottengatter has proved before that he listen to the users, it could well be that we'll be very suprised....

IConnect, Draconis TCP/IP and Wensuite TCP/IP are commercial, this is the first handicap, why pay money for something when you can get the same thing for free? From these three only IConnnect has some clients and more are being developed.... the lack of ICQ clients and network capabilities will never make it the first choice...
The other two only have their own clients build in, and since the socket they use is undocumented......

Cheers from Belgium
Dennis

5516. converting songs .cub and documents from redacteur

Newsgroup: comp.sys.atari.st

i've got a problem concerning the conversions of songs recorded in cub format on an atari st to midi files (i'm perfectly capable of doing it on my 1040ste but it's such an annoying operation i'd really would like to accomplish on my pc using a converter).
Also i cannot import documents written in "redacteur" to word 97 if i don't previously save them in ascii.Is it possible to do it with a converter?

5517. New Episode of Back In Time radio

Newsgroup: comp.sys.atari.st
Date: 1999-03-29 00:00:00 UTC
From: mstulir@geocities.com
Message-ID: <7do5on$9rd$1@nnrp1.dejanews.com>
Source record: 81659
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.advocacy,comp.sys.atari.st,rec.games.video.atari

The new episode of Back In Time has been posted. This episode features an extensive interview with Curt Vendel, curator of the Atari Historical society. Curt and I discuss all aspects of Atari history. This is the longest show to date. (Just over 40 minutes.)

To stream the show through the Internet, click on the GT2K option on the Back In Time web site.

Due to multiple requests, I have also set up an archive of all of the shows, including the new episode. These may be downloaded for offline listening. To access these shows, click on the "Radio Show Archive" option at the Back In Time web site.

All aspects of audio quality have been improved on this new show. The Real Audio player is required to hear the shows.

The next episode will feature Dana Henry, Public Relations Director for Hasbro Interactive. That episode should be posted sometime around Sunday April 11th. We will discuss Hasbro's plans for the Atari properties, the BattleSphere situation, and their recent classic game updates such as Frogger and Centipede.

The Back In Time mailing list has been set up. Be sure to sign up, and have the latest classic gaming/computing news and information sent directly to you via E- Mail.

The Back In Time website has been through some changes in the last few days to fix some font and color issues with Netscape Navigator. If you are using Navigator, the site should look better now.

5519. Computer Dungeon Garage Sale

Newsgroup: comp.sys.atari.st
Date: 1999-03-29 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <19990329101355.29639.00001668@ng-fx1.aol.com>
Source record: 81661

Hello to All...

Well, we've had our webpage up for a couple months now and unfortunately, interest and sales in the products we carry are almost non-existant. We had hoped that there was still enough of a demand for used software and accessories that would keep us in business but apparently there isn't.

So, in an effort to avoid any damage happening to our remaining Atari items from just sitting in a hot, Florida garage during the summer months, from now until June 1st, we've decided to hold a "Computer Dungeon Garage Sale" on all remaining items we have in stock.

What this means is that you look over our list of available products and make us an offer on anything you are interested in. Unless your offer is totally off base, we'll be accepting just about every offer made. The more items you want to buy, the more of a "discount" we'll be willing to give. Please contact us with any offers you might have by sending Email to: ComDungeon@aol.com

To view our product list, point your browser to:
http://www.cyberspy.com/~cdungeon/dungeon.htm

All software is original disks and has instructions. Most titles have boxes but some do not.

Please give these excellent Atari items a home and put them to use. It would be a total shame if these excellent software titles and accessories ended up in a landfill.

Attention Atari User Groups: If by June 1st we have any remaining stock left unsold, we would like to donate these items to your group. All we would ask is that you pay the actual shipping charges to get them to you. If you are interested in having any items donated to your group, please send a letter by regular USPS mail, with your groups letterhead and officers names, and we'll be in contact with you as the Garage Sale winds to a close. If more than one user group is interested, we'll divide the items as equally as we can.

After June 1st, the Computer Dungeon will permanently close its doors. We will continue to maintain a website after June 1st in a continued effort to support fellow Atari users. The business might close but we will be Atari users forever.

Thanks to everyone who has supported us.

Al Horton
The Computer Dungeon

The Newton is cool (it has the best handwriting-recognition I've ever
seen), but it's...

a) too big.
b) too expensive.
c) dead (well, perhaps not dead but it's not made anymore).

Abingdon Synthesis Projects sells 13-pin ST to 15-pin VGA cables, or you
can DIY using the instructionas on DOITF030 (can't remember the URL,
someone will though)....I am Abingdon Synthesis Projects, the full
multi-sync cable is 15 UKP, a VGA (mono only, even if the screen is colour)
is 10 UKP..

Yes, I noticed there is no forward or reverse name mapping on this
name - and I looked at whom the range of IPs belongs to.

If it is OK with the authority, I can give forward name mapping to
this... i was thinking of something like atari.cybes.co.uk ? Would
that suit people? short and sweet?

If so, email me and I'll complete the task in hardly any time.

More like *a* v2.0 Beta as Jos was very busy at one time creating updates
which were available almost daily on his site. Hopefully, the official
v2.0 will one day become available because Jos worked hard to make it a
great program.

Email Jos and let him know there is serious interest! A little positive
encouragement certainly can't hurt.

My *guess* is this is ISP or setup related more than anything else.
Yesterday, for the first time, I used a friend's Mac and connected to my
account. I provided the setup information just as I have set up my own
system. Two observations:

1) If anything, downloads are as fast or faster with my TT/STinG/Cab.
Certainly my downloads were are no slower in our samples yesterday.
Charles is certainly right about this.

2) Connection time to my pop and smtp servers encountered delays pretty
comparable to my experiences with STinG/POPwatch. Delays I never
encountered with STiK/SLIP connections.

Small sample but certainly interesting to me.

Some users have asked where a couple of the new features are. It turns out that some lines got left out of the sample initialization file. A new TB.ZIP that has these lines added to its init file has been posted. (To help with identification, the old file was 144522 bytes long and the new one is 144710 bytes long.) If you already downloaded, you don't need the revised ZIP file; there are no changes to the program. Just add the following lines to the TB.INI file. Sorry about that. (Those who have been keeping track of the intermediate beta versions probably already know these commands.) -- Mark

How about another opinion :)

a)I've carried around a Franklin planner for years and loved them, the Newton is actually smaller and light years smarter. They also are smaller, lighter and much easier on batteries than laptops.

b) Newtons costed more than today's PDAs but again less than laptops. Even in the used market, Newton cost more because they do so much more.

c) Well just because it is dead does not mean it is useless, look at the Atari line of computers. Amazing machines even after 10 years!

my 2 cents,
Neron

DV> Is this ment as a joke? French humour at its best?
[+++CUT+++][---CUT---][...CUT...]

I don't care about what you think about WenSuite and I believe that many people do the same. It was part of my enumeration. I just wanted to show that there are to many TCP/IP stacks available on Atari... whatever their qualities or defects could be.

The only interesting part of my message was the end and the question that I asked: Too many programs, too many incompatibilities, why not one only OS level TCP/IP stack? Did you read it?

I don't want to quarrel with you but your answer just got on my nerves. Everybody knows about the defects of all available versions of WenSuite. No use to repeat them endlessly. That's why I didn't say a word about it, I didn't even write an adjective. Why don't we all forget about it and wait for the next commercial release to comment?

No offense?

Well, my question is still pending. Nobody agrees with me?

I have serious hard drive problems, with a syquest syjet 1.5 gig removable drive. I am a composer and have a whole cd of my work stored on a syjet cartridge with 3 partitions. I am using HDDriver 7.00. Atari Falcon TOS 4.04
I couldn't read any of the partitions at first, but after restoring partition info I got the first and last partitions back, but not the middle one.
In diamond edge I get Dos error # 32768 reading boot sector location 1, then unrecognised boot sector , (whilst trying to choose the middle partition as the active drive)
I also have another cartridge that I cannot read the middle partition, it comes up with dos Error #11 Reading directory sectors location 6729 and 9912. (in diamond edge) I have restored partition info on this cartridge also. using HD Driver.
Is there any hope that I may be able to retreive any of this data, it's almost a years work.
Any advice greatly appreciated
Brian Lang

>
>The ST really isn't fast enough for web browsing, as the ST's resolutions
>need a lot of dithering etc to display even readable graphics.

1) I disagree. I use my 520ST both in Monochrome and in 16 colour mode.
2) The speed at 19200 with graphics on and a large Cache of files is quite acceptable compared to my falcon and my TT.
3) Monochrome graphics are hit and miss. Just like the TT in 16colour depending on the page, the TT looks worse than monochrome because of the contrast in colours forcing my to use grayscale. Then you are in similar circumstances with the ST using bigscreen at 640*400*16 or using a resource font editor that allows access to the menus and 300*200*16 usage just fine.

4) Web Browsing with the ST with graphics off and using Version 2.7 is a SIGNIFICANT advantage over 1.5 with respect is calculations of TABLES and its use of FRAMES. Far worse than dealing with graphics is watching CAB 1.5 calculate Tables. Just try the BEST ELECTRONICS ICs page. YOU WILL BE DISCONNECTED long before the ST finishes calculating the page with Cab 1.5. I have also found that the use of graphics is still to slow even on falcon and really not that much faster than the ST. Therefore in my opinion if you use graphics on on a stock falcon, you have the time to do it on an ST. And if you really want to see the TRUE COLOUR of the pictures from the web pages, then just load them into PHOTOCHROME. I do this with motorcycle images (of course they are huge, sometimes a 76k jpeg is as large as 800k). The ST and STe with Photochrome and 24bit images is awesome.

5) Like I have mentioned, I use my ST for webbrowsing. I have gotten my Falcon and TT after one year of using the 520ST for the Web. Compared to what other users have mentioned, I was expecting far more from the other machines. The TT lacks the falcons graphic capabilities, and the STOCK falcon seriously lacks the TTs speed.

6) My Falcon is so SLOW with graphics that I turn them off for the UDOIT pages:-). I have also used the ST with Graphics on for these pages. This requires lots of memory and 2.5 meg is just a hair short. However it works with the webcam. Look at the UDOIT pages in 16 colours and you may throw up. First you turn off the background pic and things start to come around.

7) I have only been using the falcon for about 3 weeks on the web. Therefore while others may find faults with my usage with the falcon, as I have pretty much just carried my ST settings across and not bothered changing anything like turning VJC on I can say that I have spent alot of time using the ST for a web browser and not just ANY ST. An ST with TOS 1.0 which seriously is affected by the folder bug (especially with graphics on)

and also is NOT optimised for using a hard disk. In January I installed
Magic 4.11 onto my ST and NVDI. These made the STock ST fly for harddrive
writes. The biggest increase came with the use of NEWsie. My Falcon with
NEWsie is no faster than my ST/Magic and NEWsie. Infact my ST retrieves the
files to the SH 204 faster than My falcon does to its external 270meg
removable.

> Its fine
>for email and newsgroups, but it just hasn't enough power for the Web. I would
>suggest looking for a secondhand Falcon, as then you have 256 colour and
>65K colours resolutions, which makes for less processing time.

Its not a bad solution if he is looking to purchase another computer to go
with his new browser. However the Newer version of CAB will work better
than the older version regardless of the computer. My Falcon with VGA works
in True Colour like an ST in Low res. Without mods 256colour is very
reasonable at 640*480.

>
>I've had mine for a year or so now, and even then I picked up it s/h for
>about 260 ukp, and I wouldn't be surprised if you can find similar or even
>better deals.

Umm, You got a better deal for yours it would appear. I bought mine a year
ago as well. My ST worked so well for the internet, I found little reason
to switch it. Finally I realised I wasn't using the Falcon. So soon after
installing Magic/NVDI into my ST, I figured It was time to use the Falcon.
OF course then I just bought my TT last weekend.

BTW if anyone has been keeping upto date with their STs the lastest version
of MP_STe which is around 2.83 runs ALOT more AVIs. South Park Animations
really come to life. Just like on my Falcon.

Rob,

If you are trying to connect through the Modem 1 or Modem 2 port, you can not get higher than 33.6. These You need to go through the Serial 2/lan port.
The Serial 1 port will support 56K, but I find that the Serial 2 port is more stable. Using a 56K V.90 USR modem I regularly get connection speeds of 48000 to 51000.

Greetings fellow Canadian. Your best bet is to find a 1040ST or a MegaST.
The locations Nicholas gave you for upgrades is as good as any. Also try
http://www.radix.net/~atari.

I have a Mega ST 2 that I am hording. I can probably find another one if
you are interested. I also have a 520ST with a 1 meg upgrade as well.
However I am a sick puppy and for some reason collect STs rather than sell
them. But as I just came home and counted 10 monitors and 8 computers,
perhaps things are getting out of hand.

BTW it is normal for our one dimensional view to stand out like a sore thum
b on a NEWSGROUP such as comp.sys.atari.st but it is just so darn far away
to locate a real country that doesn't contain the letters U.S.A:-).

Hope this helps.

Sometimes the obvious is not so obvious. In my case, my ancient phone line
only supports 33K. Therefore I can't use 56K. Depending on where you live
you may have the same problem. However I am certain that if this isn't it
that the other solutions will arrive before you receive this post.

>
>--
>
>
>HEY HEY...The Atari Quick Fax SAYS:

1.2 What kind of monitor can I use ?

1.2.1 Connecting to a TV Set

STFMs and later models were equipped with an RF Modulator allowing them to be connected to a TV's antenna connector. You then need to tune into the correct channel on the TV to get the ST picture.

In some countries, Atari shipped machines with a SCART/Peritel cable that plugs into the monitor port instead of the RF Modulator. In this case you need the adequate cable and a SCART/Peritel equipped TV set. No tuning is required, and the RGB picture is better quality than RF. These cables might still be available from some Atari dealers, but it is also quite easy to home-build one, provided you know the pinouts (see section 3.6).

A TV will act exactly like an Atari Colour Monitor, and therefore will only display low or medium resolution modes.

1.2.2 Atari Monitors

First of all, the Atari ST has 3 screen resolutions: 1 monochrome (Hi-res), and 2 in colour (Mid-res and Low-res)

Monochrome (640x400) requires special Atari high resolution 72Hz monitors (SM models). These monitors have a very stable, although small, paper white display. SM monitors can only display monochrome mode. TTs and Falcons can do without the SM monitor and display ST high-res on a VGA monitor.

ST Medium (640x200/4 colours) and ST Low (320x200/16 colours) need a colour monitor (SC series) or a TV.

Note that a monochrome display can only show Hi-res, and a colour monitor (or TV) can only display Mid-res and Low-res. Most games require colour, and most application programs require Hi-res, so the choice of your monitor is important.

If you want to display all ST screen resolutions with an ST/STF/STFM/STE you need both types of monitors or you can use a multisync monitor with a special adapter. A temporary solution for running monochrome programs on a colour monitor, can be to use a software Hi-res emulator such as Sebra (see section 2.2.3).

These monitors cannot be connected to a TT, as this machine requires a VGA monitor.

1.2.3 VGA, SVGA or multisync monitors

First of all, you need a monitor that supports RGB signals, and the following refresh rates :
ST High ST Low/Medium
Vertical refresh rate 72 Hz 50 or 60 Hz
Horizontal refresh rate 31.5 kHz 15.75 kHz

You will then need to build a simple adapter that converts the RGB signal from the ST monitor connector to the monitor's connector. The proprietary connector used on the Atari will probably be difficult to find though.

A FAQ on the use of multisync monitors with the ST can be found here:

ftp://ftp.teleport.com/users/atari/multsync.faq

You might also want to look at section 3.6 of this FAQ on connector pinouts.

1.2.4 Falcon Video

The Falcon is equally happy with a VGA/SVGA/etc. monitor or an old ST/STE type monitor (though resolution will be limited to 640x400 interlaced on these).

Whatever the display you choose, the Falcon requires an external video adapter, either for ST type monitors or for VGA screens. There are also third party adapters that can switch between the two displays.

A text file about Multisync/VGA/ST-res adapters for Falcon is here:

ftp://nic.funet.fi/pub/atari/falcon/doc/falcadap.zip

I just happen to have the Quick Fax on my HD as a text file waiting to be used!

Hope this helps!

K > and the object of the game was to shoot the other castle with
K > cannons. Can anyone please tell me which game this was?

Ahh, the memories...

Several years ago I downloaded a zx81 emulator for the ST, which included several games. One of them was Ballistic(?), or something like that. A lot of fun.

It seems likely that this was available for lots of machines, in one disguise or another.

Has anyone 'hot-rodded' this game? I can think of lots of enhancements that could be made, including more-or-less mobile armies with smaller cannon, missiles, whatever.

As most current games are based on these old, simple games, why not do it with this one? Or has it already been done?

5559. Where can I buy a Falcon??

Newsgroup: comp.sys.atari.st
Date: 1999-03-30 00:00:00 UTC
From: nethak@aol.com
Message-ID: <19990330031518.15765.00000628@ng-ba1.aol.com>
Source record: 81696

Hello all.

Just a question: Are there actually inexpensive commercial sources to buy a Falcon, or do I have to wait until someone posts a FS: listing?? I sold my 520ST to a neighbor about 3 years+ ago and I am wanting to jump right back into Ataris again. I am not independently wealthy or else I'd love a newer clone. Since that's probably not possible; I'll settle for a Falcon -- any ideas? what is the going price?
What do the clones go for in US$? I sent some emails to companies and have not received a response.

Thanks for your help.

```
Hello,

I have a complete Atari Falcon 030 system for sale for 350gbp ono.

This does not include shipping - I would prefer a buyer to
collect so that they can assure themselves that everything
is working before taking it away - I live in Newcastle upon Tyne.

See below for a complete description. Any questions, feel free to
email me.

Michael
--
# To send me an email substitute @ for % in this address:
# michael.clemmetsen%syntegra.bt.co.uk

------------------ cut here ------------------
** Falcon System **
4MB RAM, no internal IDE
External 520MB SCSI drive and Falcon SCSI to 50w SCSI connector.
Loaded and configured with the software listed below as well as
loads of freeware, shareware and demos mainly downloaded from the
internet.
(Seagate mechanism - ST3655N, including technical
documentation.
The drive is internally terminated so you do not need a
terminator, but will have to put it at the end of the SCSI
chain if you use any other devices.)
ClockPatch fitted (by System Solutions)
(Required for accurate Direct to Disk recording)
TT Keys fitted
(High quality replacement keyboard contact cups that
improve the keyboard feel -you'll definitely notice
the difference if you are a touch typist)
Falcon VDU port to VGA adapter cable
(required to connect to a SVGA or VGA monitor)
BlowUp Hard II
(Hardware attachment that plugs into the cartridge port
providing a faster horizontal sync, thereby allowing
higher resolutions on suitable monitors, i.e. those
that can take a variable horizontal synch signal up to
50KHz. Includes software drivers and manual. The software
can be used without the hardware if the monitor is
unsuitable, i.e. lower refresh rates have to be used.)
2 Mice
```

(Not Atari, i.e. better microswitched devices)

Tabby graphics tablet
(Approximately A5 size, including software drivers and manual)

SVGA Monitor
(Includes Polarising screen filter. Works well with the BlowUp
software, providing resolutions around 800x520,
depending on colour depth.)

Epson LQ100 24pin dot-matrix printer including Manual

** Commercial Software **
All are english language versions and are complete with
original disks and manuals.
* System
HD Driver 6
(Hard disk driver including format and setup)
NVDI 4.02
(Display accelerator and TrueType and Speedo Font
display and printing.
Including over 40 high quality Truetype fonts.)
Magic 5.13
(Pre-emptive multi-tasking operating system,
including support for Windows compatible
long file names)
Kobold 2.5
(Fast file copier and file management tool)
Geneva 006
(Co-operative multi-tasking operating system)
NeoDesk 4 005
(Replacement Desktop integrates seamlessly
with Geneva but also works with Magic)
NeoDesk CLI 2
(Command line interface that integrates with NeoDesk)

* Productivity
Papyrus 5.15
(The best word processor/pagelayout application
on the Atari platform. Includes features, such as
discontinuous selection not available in MS Word.
Can import and export to MS Word)
Calamus S
(Premier DTP app.)
Twist 2
(Relational Database)
Apex Media
(Falcon only graphics and animation app.)

* Programming
Lattice C 5.52
(Professional C compiler that can target all 680x0

processors. Comes with libraries and documentation for
creating fully compliant GEM programs.)
HiSoft C
(C interpreter. May not work on the Falcon, but useful
for its GEM library which could be used with Lattice)

* Games
The Killing Cloud
(3D point of view strategy/flight sim/shootemup in
21st Century Los Angeles.
May work on the Falcon using one of the ST
compatability programs e.g. Backwards)
Epic
(3D point of view strategy/flight sim/shootemup in
space and on distant planets.
May work on the Falcon using one of the ST
compatability programs e.g. Backwards)
Frontier - Elite II
(This works fine on the Falcon and can run from the
hard disk)

** Books & Manuals & Magazines **
Falcon System Manual
CalApp User Guide
(Calendar and Appointment Software supplied with Falcon)

The Atari Compendium by Scott Sanders (2 volumes)
Modern Atari System Software (HiSoft)
(Both these books are essential for any serious
Atari software development as they document all
the system calls and style guidelines for all
released versions of the TOS operating system.
As far as I know none of them are published anymore

Atari World - issues 1 to 11 inclusive

** Other **
Box of floppy disks with a variety of public domain, freeware
and shareware software, e.g. MiNT and a bunch of MiNT related
tools and utilities.

A few cables that may be of use.

5561. Re: TT030 and a 56k modem

Newsgroup: comp.sys.atari.st
Date: 1999-03-30 00:00:00 UTC
From: Kerstin Hoef-Emden <aeb25@uni-koeln.de>

Hi to all,

Steve Hammond <shammond@loop.com> wrote:

>> I've tried HSmodem and fast serial, but I cannot get my 56k V.90 modem to
>> connect any higher than 33.6k. Can someone tell me how to set it up
>> correctly?

> If you are trying to connect through the Modem 1 or Modem 2 port, you can not get
> higher than 33.6. These You need to go through the Serial 2/lan port.

Modem 1 goes up to 19200 bps
Modem 2 can do 150 kbps but from 33800 bps upwards the speeds are to weird to
be supported by modems
Serial 1 misses some cabling, it is not a complete interface
Serial 2 goes up to 115200 bps without HSModa and with HSModa up to 230400
bps, but it misses a line to realise ingoing calls

There are two possibilities:
a) using serial 2 will work just fine
b) modifying modem 2 (changing some pins to use alternative speed rates).
The recipe is described in the HSModa docs and works as well very good.

Regards,

Kerstin

A friend of mine with an st used for sequencing/ sampling wants to transfer files from a CD he got with Future Music magazine to a floppy. How can this be done (without investing in a new CD player). We have access to Macs, PCs & x86 Linux.

My only thought is using an emulatoe, I had MAC UAE for the Amiga but have never played with it. Will it be able to write to atari format disks?

Cheers for your help
please cc a direct response.
Mark

Transferring files from PC to ST is easy.

All you need is a PC formatted 720K (DS/DD) disk (NOT 1.44MB HD).

Copy the files to this disk. An ST will read it quite happily.

You can copy files back the other way too. As long as the disk is PC
formatted, it will work on both machines.

Adrian

But I have never carried around anything before, so after after having seen the Palm III I can't imagine having a PDA that won't fit in my pocket. Then it would be just like my cell-phone which I keep forgetting everywhere ;-)

> b) Newtons costed more than today's PDAs but again less than laptops.
> Even in the used market, Newton cost more because they do so much more.

Yup, it does a lot of things but it's not what I'm looking for.

> c) Well just because it is dead does not mean it is useless, look at
> the Atari line of computers. Amazing machines even after 10 years!

Very good point :-) But the main reason why I want a Palm is that PalmOS actually is a lot like TOS/GEM, and I'm looking forward to write software for it. I like it's 68k CP and the free dev-kits, and I intend to write some GEM-tools for it (like a conduit for aMail).

> I've tried HSmodem and fast serial, but I cannot get my 56k V.90 modem to
> connect any higher than 33.6k. Can someone tell me how to set it up
> correctly?

1) First, which port are you using? Some simply don't work at high-speed:

Modem 1 & maximum 19200 baud.
Serial 1

Modem 2 up to 38400 (standard) or 76800 and 153600 (non-standard).

Serial 2 & up to 115200 or (with HS-Modem or Fast-Serial only!) 230400.
LAN NOTE: Serial2 and LAN is the same port. You need to choose
where the signal is going and set your prefences (default OS
setting is for LAN) when configuring HS-modem's SCC.PRG.

Btw, Modem-2 and Serial-2 are almost the same. The main difference is,
Serial-2 doesn't have the RING-DETECT pin connected, so it cannot be used
to _answer_ incoming calls (when hosting a BBS, for example).

Note that most comm software cannot use speeds above 19200, also.

Software that knowns about the fnctl(tiocibaud); interface provided
by MiNT or HS-Modem can directly access those higher baudrates.

Otherwise, you need to install HS-Modem and access those baudrates by
calling 110 or 150 baud, which are remapped to 38400 or 115200 baud.

2) Second, does your phone line allow for high-speed communications?

In some places, the copper wire is the same one installed by the
phone company 50 years ago. Needless to say, those cannot handle
high-speed telecom cleanly...

3) Third, make sure you correctly set your modem for 56K v90 mode.

Most modems can be set for v90 and (depending on manufacturer)
X2 _OR_ K56flex also. Obviously, if yours is set for the wrong
protocol, then it will fall back to 33600 at connection time.
(good idea to check which 56K protocol(s) your ISP supports, also)

Finally, DO NOT use modem.cpx or serial.cpx at all. Instead, let
the software configure the port (set your preferences in there).

One exception: if you use STinG, then you need to configure the
port options using the included serial.cpx module, because STinG
doesn't perform this itself.

Here are three California dealers. Two surely have Falcons in stock.
ATY may or may not. Alex is able to locate anything you need however.
The prices WON'T be cheap, but you did ask for commercial dealers.

I have seen Falcons from $300.00 without much extra to $500.00 with goodies.
Most external hardware for the Falcon is standard stuff and easy to come by.
Look for a deal with the software you need. Softs are still expensive (by
Atari standards), but not as bad as the PC/Mac world. Some Atari software is
very had to obtain new as well, so a second hand unit isn't a bad deal when
they comeup. You might want to start researching what your needs are and
checking to see what the current versions of applications are before you buy.
Updates are a pain for some Atari software, but most of the releases in the
last year or so do just fine and you won't be missing much getting a version
of an app that is a rev or two old.

5577. For sale: Atari Falcon system [UK]

Newsgroup: comp.sys.atari.st
Date: 1999-03-30 00:00:00 UTC
From: Mark Parry <paz@wile.demon.co.uk>
Message-ID: <fH+nqdAh4RA3Ew2u@wile.demon.co.uk>
Source record: 81714

Hello everyone,

Well, it hasn't been easy, but time and financial constraints have
forced me to reluctantly sell my Falcon setup :o(

So, without further ado, here's what I've got:

Atari Falcon030 - With TOS 4.04, 14 meg RAM, 850 meg Hitachi IDE hard
drive, and 68882 FPU.

Hardware - US Robotics Sportster Vi 14.4 external faxmodem,
AST 14" SVGA colour monitor, Epson FX80 b/w dot
matrix printer (with lots of paper), several mouse
mats, two mice (one Atari), durable Competition Pro
joystick, Atari Jaguar joypad.

NOTE: All the above is in perfect working order, and comes
with all the necessary leads, etc. :o)

Software - Over 300 disks (mainly High Density) full of all
(All original) the software you could ever need. Including:
--- -------- Llamazap, Pinball Dreams, Crown of Creation 3D,
Imagecopy 4, CAB 2.5, a complete set of original
Falcon distribution disks (MiNT, SAM, SpeedoGdos,
Atari Works, etc.,), HD Driver v7, UVK 7.1.

As well as all that, there's also a massive collection
of Falcon and ST PD and shareware (many registered
titles), and literally thousands of ZX Spectrum games
(with emulator), plus loads of ST games far too
numerous to list, all in proper drawer-type disk
boxes.

A big load of magazines including ST Format, Atari
World, ST Review, Atari Computing, etc.

Not only all that, but I'm also giving away a free ST as part of the
deal !*
It's an STFM, TOS 1.04 with 1 meg RAM, again in perfect working order,
and with all the necessary bits.

* The ST isn't compulsory ;o)

I'm looking for 450 pounds for the lot (I don't really want to split it,
unless the offer is too good to resist....), including delivery to
mainland UK. If you're interested, please reply (preferably by Email)
and let me know.

Thanks,

See ya,

Mark.

P.S. Does anyone know where I can get a decent .MOD file player for the PC, please ?

The 520STfm has TOS (operating system) and GEM (windows
interface) built-in. If I recall correctly, an ST boot disk that can
be blank, as long as it has a boot sector, will bring the system up.
If you start up the system with no disk, it will eventually go to GEM
after a minute or two.

The 520STfm can read IBM-formatted disks (if you can format a
single-sided, low-density 3.5" disk with a PC these days) but can't boot
off of them.

I've posted this to comp.sys.atari.st; they know more than I can remember
(I had a 520STfm ten years ago).

5580. Net Connection on Tosbox

Newsgroup: comp.sys.atari.st
Date: 1999-03-30 00:00:00 UTC
From: guitarra@afn.org
Message-ID: <7drabs$4sae$1@spnode25.nerdc.ufl.edu>
Source record: 81717

well I must admit that Toxbox 1.8 works quite well with all the Internet programs I tried. At the moment I am posting this using Newsie/Stik/Serialfx/. I have also loaded in the background Cab Cab which also works great and a while a go connected via IRC using Fracirc. The IRC connection is slow but this is only a 486 with 4 megs of ram an a 14.4 modem.

Other programs I tested are:

Calamus, PageStream, Ant Mail
STZIP, KOBOLD, Phasar ...they all work stable under Geneva/Neodesk4

Now I can run all my Atari prgs when I am away teaching

Thanks Mark!

I sent my payment today!

5583. Re: TT030 and a 56k modem

Newsgroup: comp.sys.atari.st
Date: 1999-03-30 00:00:00 UTC
From: "Atari-Users.Net" <rmahlert@my-dejanews.com>
Message-ID: <7dri2n$a6j$1@nnrp1.dejanews.com>
Source record: 81720

First of all... thanks for the replies..

I know it's not the modem or the phone line or the ISP, I tested it on a pc and it connects at 48-50k baud. 99% of the time at 50k baud (New phone lines).

I have also tried the modem on on my Mega STE on modem port 2 with Fast serial . On that, Sting reports a 48k baud connection (Boy it flies!). Is it showing the wrong connection speed??

On the TT, I have it on Modem 2 and have tried Fast serial and HS modem. With Peter Rot??(sp?) serial.cpx(I have it on the Mega STE also) that comes with STing. I use the same setup from the Mega STE. But I cannot get any higher than 33.6k speed.

So what am I doing wrong on the tt030? Don't the TT030's and Mega STE's share the same modem & Serial port designs? ? ? ?

Thanks again!
Rob Mahlert

Hi,

Thanks for the info. I will be more patient and let it wait. *cross fingers*
I saw a white screen, waited for a few secs. Restarted and still the same
thing. I never knew of the 1-2 min wait time.

Can't wait to get home and try it out again.
Thanks,

-Mike

At least in the UK, the RCA TV jack outputs an aerial/antenna signal, so if
you've plugged it into a line level video input that may be the problem.

>The 520STfm has TOS (operating system) and GEM (windows
>interface) built-in. If I recall correctly, an ST boot disk that can
>be blank, as long as it has a boot sector, will bring the system up.
>If you start up the system with no disk, it will eventually go to GEM
>after a minute or two.

Just about right. The disk doesn't need a boot sector unless it's a
self-booting disk (as with some games). Any old disk will do, even none as
you point out.

>The 520STfm can read IBM-formatted disks (if you can format a
>single-sided, low-density 3.5" disk with a PC these days) but can't boot
>off of them.

It can boot irrespective of the disk, and reads/writes to IBM formatted
disks without any problems. Later versions of TOS (1.4 onwards) use DOS
formatting by default. And most Ataris use 720k double-sided double density
disks. Some early 520STFMs just had single-sided drives, but I think most
were supplied with double sided. It's possible to upgrade to HD floppies
with a hardware mod, but you need TOS 2.06 or higher (or an alternative OS
such as MagiC) to use them.

5589. GameCode API on Atari ST?

Newsgroup: comp.sys.atari.st
Date: 1999-03-30 00:00:00 UTC
From: Thomas Beutel <Thomas.Beutel@efi.com>
Message-ID: <37015C58.94B61BED@writeme.com>
Source record: 81726

Hi All,

Is there any interest for a port of the GameCode API
to Atari ST? It seems to me that a translation of the
API to ST would be straightforward, and we would
then gain another source of games for our favorite
platform.

http://www.sodan.dk/gamecode/documentation.html

Even though I am a big fan of the Newton (as well as Atari), the Palm
III and
Palm V are very nice PDAs. They are popular in large part because they
do
alot of the right things easily, at a good price and in a good package.

Note: When Apple put the ax to the Newton, a number of Newton employees
were
hired by Palm (3com).

Neron

5600. Fuji Sighting (Hasbro,were you watching)

Newsgroup: comp.sys.atari.st
Date: 1999-03-31 00:00:00 UTC
From: magicmac@my-dejanews.com
Message-ID: <7dsgvr$4t8$1@nnrp1.dejanews.com>
Source record: 81547

Tonight on the Daily Show, broadcast on the Comedy Central Network, three Atari games were used to deplict the current NATO invasions. (my opinion).

Anyway to the good(?) part, video clips of Defender, from the old game console, Wolfnstein from the Jaguar, and Pong were used in the satire.

I wonder what Hasbro would have to say about this if they even had the slightest idea that they actually own the rights to these games?

Should 4-Play be as reserved as they are considering major networks are utilizing "Atari-Hasbor" copyrighted products in this method?

Mike

5602. Re: TT030 and a 56k modem

Newsgroup: comp.sys.atari.st
Date: 1999-03-31 00:00:00 UTC
From: Martin-Eric Racine <q-funk@pp.fishpool.com>
Message-ID: <Pine.LNX.3.96.990331104827.2858C-100000@hal.fishpool.com>
Source record: 81549

> Don't the TT030's and Mega STE's share the same Serial port designs?

Actually, they don't. From an historical perspective, one has to realize that the TT030 was an experimental testbed; a lot of "educated guesses" turned out to be wrong and were later corrected on MEGA-STE and Falcon.

Basically, the MEGA-STE and Falcon's SCC ports (Modem 2 and Serial 2 each originate from one half of the same chip - a Zilog SCC) are clocked at an industrially-correct speed which allows baudrates based on 14400 series.

This means that both machines provide 57600/115200/230400 bauds on either of their SCC ports. Unfortunately, the TT030's Modem 2 is clocked on an entirely different timebase, which means we have the unusual 19200 series instead (76800/153600 - respectively 4 and 8 times 19200).

Btw, strangely enough, 57600/115200/230400 _should_ be possible using the same timebase, but would require base 3 multiplication (instead of base 2) which might make writing the drivers more difficult.

Here's the math about that:

57600 / 14400 = 4
57600 / 19200 = 3

Of course, 115200 and 230400 are 2 and 4 times 57600, respectively.

TOSFS really is a normal DOS filesystem, so mtools should definitely
be able to read that, unless you purposely omitted the VFAT driver from
your kernel distribution.

Mr.Wagner,

it might be a good idea for you to learn netiquette.

Posting a dozen of messages in a row, especially those involving a
commercial auction website, is is downright rude to the others
reading the newsgroup as it floods their screen needlessly and wastes
bandwidth on downloading headers for a dozen more messages.

In the future, please keep it concise; ONE single newspost, along the
lines of:

"Hello, I'm selling a bunch of Atari stuff:

Package 1.
Description that fits on one or two lines.
http://www.where.it.is.com/description/package1.htm

Package 2.
Description that fits on one or two lines.
http://www.where.it.is.com/description/package2.htm

Find more info on each package at the URLs above on e-bay.
Thanks."

Please, remember that people in most countries have to pay for
their telephone usage _even_for_local_calls_within_their_city,
so please spare them the trouble of downloading 12 messages and
having to delete every one of them after, while boosting their
phone bill in the process.

Thank you for listening.

>platform.

Game makers are a dying breed on this platform.. the audience is next
to none existant for new games made by hobbyist programmers

I blame Little Green Desktop and Atari.org for flooding the internet
with pirate software.. it all but killed off the game making Atarians
because it is hard to compete with free commercial quality games..

You can't read an Atari HD from a PC after it has been formatted with
TOS. You will need an Atari to read your data again, and transfer it to
a disk formatted with BigDOS, which is a DOS compatible filesystem for
the Atari.

Hi, all. I've just purchased a Hades 060 :-)) But, as I can't seem to use the resolutions that is provided with the Machine (bad monitor), I need a program that I can use to create my own resolutions. If anyone know if there exist a program that will let me design resolutions for the ET6000 gfx card on the Hades, please let me know! Thanks.

Odd Skancke - ozk@atari.org

btw, I just love this 060 beast ;-))

AFAIK, a specific ET6000 VGM doesn't exist. I'm been told that the ET4000
VGM should work also but I never managed to create new resolutions with
this prog. If you like I can send you some sta_vdi.bib's.

Hello to all,

Some words about Devil Studio (Midi version) and the Newclock.

Devil Studio is a Cubase like Midi sequencer for Atari Falcon with
graphic editing, key edit, drum edit,...

Newclock is an external clock for the Falcon delivring the 44,1 Khz and
48 Khz frequency. Allow you to sample or make music in 44,1 Khz...

For more info : www.softjee.com
E-mail : info@softjee.com

Thanks,

****
********** Recalling of SOFTJEE's product

** A.F.S.

A.F.S is a Audio File Selector allowing you to listen audiofile
simplying by
clicking on it in the selector. A.F.S can play AIF/WAV/AVR file in D2D.
Its
very simple file selector allow very quick using in accessory for Cubase
for
example.

** Audiomid

Audiomid is an audio to midi translater. You can load audio sound
(listen
it) and translate them into
Midifile. You can immediatly listen the Midifile (a midifile player is
incorpored). The display allow you to see in same time audiofile and
Midifile (in key edit mode).

Last revision is 1.01

** Easy Beat

Easy Beat allow you to compse easily audio rythms and record them in an
audio file or midifile (and Digital Tracker song too...). Easy Beat
manage 8
tracks and you can put for each tracks your own audio sound or audio
sound
from audio banks like TR 808,...gived with the software.

Easy Beat is available in France and Germany. Ask to your current dealer to
have it !

** EXPAND

Expand is a Midi Sampler Software. You can load audio sound, make
instruments multi-sample and play them with a Midi keyboard or a
sequencer.
You can set too the ADSR for each sound, have graphic panoramic
setting,...Expand understand the most of Midi messages like note-on,
note-off, program change, main volume, pitch, fine,...

You can too put some digital effects on each channel like Reverb, Echo,
Chorus,...

Last revision 1.04 with using in screen with 2 colors.

Revision 1.03 with the following function added :
Play AIF in D2D, load WAV, Selecting of External Clock, Frequencies of
replay, set repeatt start/end of each sample, set polyphonic voice for
each
Midi channel (select automatic for dynamic polyphonic voice or set the
number of voice for each channel).

** MIDPLAY

Midplay is a Midifile player which play MID with audio sounds (so you
can
hear Midifile only with Midplay and your Falcon). Midplay can play too
KAR
file and displays the text of these files. Midplay use a GM kit audio to

play midifiles. You can mute each channel, have informations on it,...

Last revision is 1.06

** Pretty (Atari and BeOS)

Pretty is a Midifile Player BUT with MIDI OUT.(this is the difference
with
Midplay). You can plays play list of Midile/Dir of Midiles. Pretty have
too
severals options like "Record Module" which allow you to record in audio
the
Midifile you're playing and "Grid edit Module" to display/change the
Midifile.

Last revision is 1.01

** DIGITAL HOME STUDIO (D.H.S.)

D.H.S. is a very big soft allowing you to sample audio sound, sequence
audio
sound in D2D or memory/ sequence Midi informations. D.H.S can load 256
samples and you can play them with any note you want. You can put them

on
the sequencer or edit them in the sampler. You can apply digital effects
in
real times or in the sampler. You can use in the sequencer Midi
information/audio sound/Direct To disk sound in the same time. You have
too
some graphic function to set main volume of each track, effect level,...

D.H.S. manage 64 voices/ 32 tracks and play at 50 Khz 16 bits.

Now fully compatible with AfterBurner 040

Last revision is 1.07.

** DIGITAL TRACKER 1.9

The most popular/used soundtracker on Falcon. The new version of the
DIGITAL
TRACKER
is 1.9 better than the 1.2 distributed by Frontier Software.

From: skeezix@loner.icomm.ca
Message-ID: <7dtq6ulci1@hub.org>
Source record: 81561

I've just bought a STacy.. its being shipped right now! I'm an old ST lad from back in the day, though I've not used one much for the last few years (as I'm a unix developer).

Seems MiNT has come a logn way since I last saw it a decade back.. can someone letr me know what the "good stuff" is -- how much disk space do I need? Whats this about running Xwindows on an ST? (that would rock, if I coudl port some of my unix applications to the ST for X :)

Since the STacy only has a 20 MB disk drive.. what sort of disk is it? MFM? RLL? IDE? If IDE, life is good, but I somehow doubt that. How hard is it to upgrade the drive?

Jeff

Respond in email if you can, but I'll chekc back here..

From: skeezix@loner.icomm.ca
Message-ID: <7dtqehlgc1@hub.org>
Source record: 81562

I'm interested in starting a web and ftp archive of Atari ST BBS software. I've posted afew times, but never with too much response.. but if I ever do get a decent response, I'll do it. Space is not an issue.

I've got a good stock of BBS! Express ST games and such, but not much in the Forem or Turbo realms, or other side bbs's like STadel, Fnordadel, Star, etc etc. If someone has a pile of them, let me know.

I'l also looking for any source code peopel might hage, in C, Pascal, GFa, whatever. I wrote an ST-like BBS for Unix, and someday I'll put it up.. but I want to have a bunch of ST games ported, firs.t I've got one of Jon Radoff's old Space Empire sources that he kindly passed along.. but I'm looking for Mount NevereST and all the other classics. Let me know..

Please respond via email for this one..

Jeff

Will a 1 Gig work with the original internal host adaptor, or does it
have to be under a Gig?

How did you manage to beef up your Mega STE to 40 Mhz and an extra
16 Meg RAM? It must be a pretty cool combination.

Cheers

Jeff Mitchell (skeezix@loner.icomm.ca) wrote:

: Since the STacy only has a 20 MB disk drive.. what sort of disk is
: it? MFM? RLL? IDE? If IDE, life is good, but I somehow doubt that. How
: hard is it to upgrade the drive?

The internal hard drive is SCSI, and it should be fairly easy to find a good fast replacement. Installation is going to be reasonably difficult, however, because you must be extremely careful when opening the STacy. The cabling that goes from the board to the screen is not long enough to open the case completely without yanking on the cables. Get an extra set of hands to help you if possible, take your time, and be careful. Once the case is open and the cables are disconnected, the drive bay shouldn't be difficult to access so you can switch drives. When re-assembling the case, be cautious not to pinch any cables in the side of the case.

Cheers!

k> both Linux and windows but cannot seem to get linux (mtools) to see it.
Is
TOS and MS-DOS partitions are compatible if not bigger than 32 MB.

If you have bigger partitions (I suppose you have) and no Atari near by,
look
at http://www.emulators.com.

The Gemulator emulates an Atari on a PC and it is also possible to use
Atari
formatted HD's (needs an Atari HD driver!). Otherwise look out for
GemExchange at the same website. A Windows tool to transfer data from
Atari
to PC HD.

But: This *probably* just works with an Atari SCSI HD! If you have an
IDE
drive, I do not know whether it works ...

Greetings, Oliver

I was there a few times 6mo or more back, but not in the last
while. He might've given up shop, or just not noticed a crash, since he
rarely checked on the old system. Or maybe it crashed, and he couldnt' be
bothered ot fixit. He was looking for peopel to buy Express from him, so
he coudl make some last cash on it..

> A really cool game that I've never been able to get in contact with the
> author about (to register!) is Final Frontier II. Ever play it? ;-)))

Never played it. I've got the GFA version of Frontier 1,
somewhere..

I'll have ot ding up your BBS sometime. I love Express. I was a
support system for a few years, way back..

Jeff

Okami setup *looks* difficult because the documentation covers so many
different uses. For NOS usage (with POPwatch/NEWSwatcy) you can delete
most of the o.inf file and things don't look nearly so overwhelming.

Once you have the program working, the flexibility causes one to tweak and
tweak, or not, to your heart's content.

If you're serious about setting up Okami, I'd certainly sent you my cut
down o.inf file as a guide.

>find though.
There's just one problem; finding a monitor these days that supports the
15.75kHz...these are not manufactured anymore. Instead of hunting for a
old second hand monitor which probably has had his best years, try a
EXTERNAL VGA TV TUNER.

Connect the tuner between the monitor and the ST, instead of plugging
the antenna cable in the tuner, plug in the RF cable from the ST.
These TV Tuners don't cost very much, and a brandnew monitor might be
cheaper then a ten years old NEC 3D. As a additional bonus you get a
televison with ceefax and zapper thrown in. You can connect the tuner
to every size monitor and it even works with LCD monitors....

Cheers from Belgium
Dennis

>the same modem & Serial port designs? ? ? ?

Modem 2 is limited to 38.4 because all the rates after that are
non-standard. I think Modem 2 can be hacked with some mod but I don't
know how that is done.

You need to use Serial 2 which is located on the metal plate that
covers the VME slot. Serial 2 is the port that has the rates you are
looking for.
